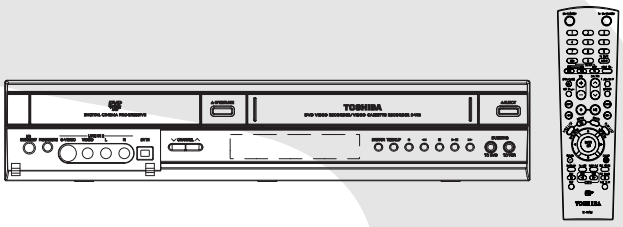
SERVICE MANUAL

DVD VIDEO RECORDER/ VIDEO CASSETTE RECORDER

D-VR3SU
D-VR3SC
D-VKR3SU



DOCUMENT CREATED IN JAPAN. Oct., 2004

CONTENTS

1. Precautions

1-1 Safety Precautions

1) Before returning an instrument to the customer, always make a safety check of the entire instrument, including, but not limited to, the following items:

(1) Be sure that no built-in protective devices are defective or have been defeated during servicing. (1)Protective shields are provided to protect both the technician and the customer. Correctly replace all missing protective shields, including any removed for servicing convenience.
(2)When reinstalling the chassis and/or other assembly in the cabinet, be sure to put back in place all protective devices, including, but not limited to, nonmetallic control knobs, insulating fish papers, adjustment and compartment covers/shields, and isolation resistor/capacitor networks. Do not operate this instrument or permit it to be operated without all protective devices correctly installed and functioning.

(2) Be sure that there are no cabinet openings through which adults or children might be able to insert their fingers and contact a hazardous voltage. Such openings include, but are not limited to, excessively wide cabinet ventilation slots, and an improperly fitted and/or incorrectly secured cabinet back cover.

(3) Leakage Current Hot Check-With the instrument completely reassembled, plug the AC line cord directly into a 120V AC outlet. (Do not use an isolation transformer during this test.) Use a leakage current tester or a metering system that complies with American National Standards institute (ANSI) C101.1 Leakage Current for Appliances and Underwriters Laboratories (UL) 1270 (40.7). With the instrument's AC switch first in the ON position and then in the OFF position, measure from a known earth ground (metal water pipe, conduit, etc.) to all exposed metal parts of the instrument (antennas, handle brackets, metal cabinets, screwheads, metallic overlays, control shafts, etc.), especially any exposed metal parts that offer an electrical return path to the chassis.
Any current measured must not exceed 0.5mA. Reverse the instrument power cord plug in the outlet and repeat the test. See Fig. 1-1.
Any measurements not within the limits specified herein indicate a potential shock hazard that must be eliminated before returning the instrument to the customer.

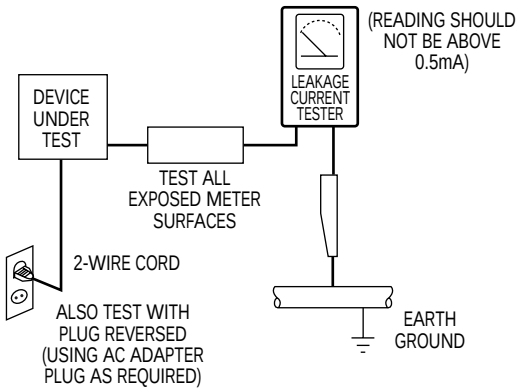


Fig. 1-1 AC Leakage Test

(4) Insulation Resistance Test Cold Check-(1) Unplug the power supply cord and connect a jumper wire between the two prongs of the plug. (2) Turn on the power switch of the instrument. (3) Measure the resistance with an ohmmeter between the jumpered AC plug and all exposed metallic cabinet parts on the instrument, such as screwheads, antenna, control shafts, handle brackets, etc. When an exposed metallic part has a return path to the chassis, the reading should be between 1 and 5.2 megohm. When there is no return path to the chassis, the reading must be infinite. If the reading is not within the limits specified, there is the possibility of a shock hazard, and the instrument must be repaired and rechecked before it is returned to the customer. See Fig. 1-2.

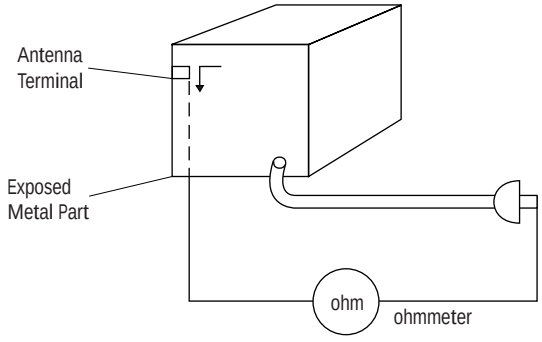

Fig. 1-2 Insulation Resistance Test

2) Read and comply with all caution and safety related notes on or inside the cabinet, or on the chassis.

3) Design Alteration Warning-Do not alter or add to the mechanical or electrical design of this instrument. Design alterations and additions, including but not limited to, circuit modifications and the addition of items such as auxiliary audio output connections, might alter the safety characteristics of this instrument and create a hazard to the user. Any design alterations or additions will make you, the servicer, responsible for personal injury or property damage resulting therefrom.

4) Observe original lead dress. Take extra care to assure correct lead dress in the following areas:
(1) near sharp edges, (2) near thermally hot parts (be sure that leads and components do not touch thermally hot parts), (3) the AC supply, (4) high voltage, and (5) antenna wiring. Always inspect in all areas for pinched, out-of-place, or frayed wiring, Do not change spacing between a component and the printed-circuit board. Check the AC power cord for damage.

5) Components, parts, and/or wiring that appear to have overheated or that are otherwise damaged should be replaced with components, parts and/ or wiring that meet original specifications.
Additionally, determine the cause of overheating and/or damage and, if necessary, take corrective action to remove any potential safety hazard.

6) Product Safety Notice-Some electrical and mechanical parts have special safety-related characteristics which are often not evident from visual inspection, nor can the protection they give necessarily be obtained by replacing them with components rated for higher voltage, wattage, etc. Parts that have special safety characteristics are identified by shading, an (⚠)or a (⚠)on schematics and parts lists. Use of a substitute replacement that does not have the same safety characteristics as the recommended replacement part might create shock, fire and/or other hazards. Product safety is under review continuously and new instructions are issued whenever appropriate.

1-2 Servicing Precautions

CAUTION : Before servicing units covered by this service manual and its supplements, read and follow the Safety Precautions section of this manual.

Note : If unforseen circumstances create conflict between the following servicing precautions and any of the safety precautions, always follow the safety precautions. Remember: Safety First.

1-2-1 General Servicing Precautions

(1) a. Always unplug the instrument's AC power cord from the AC power source before (1) re-moving or reinstalling any component, circuit board, module or any other instrument assembly, (2) disconnecting any instrument electrical plug or other electrical connection, (3) connecting a test substitute in parallel with an electrolytic capacitor in the instrument.

b. Do not defeat any plug/socket B+ voltage interlocks with which instruments covered by this service manual might be equipped.

c. Do not apply AC power to this instrument and /or any of its electrical assemblies unless all solid-state device heat sinks are correctly installed.

d. Always connect a test instrument's ground lead to the instrument chassis ground before connecting the test instrument positive lead. Always remove the test instrument ground lead last.

Note : Refer to the Safety Precautions section ground lead last.

(2) The service precautions are indicated or printed on the cabinet, chassis or components. When servicing, follow the printed or indicated service precautions and service materials.

(3) The components used in the unit have a specified flame resistance and dielectric strength.
When replacing components, use components which have the same ratings. Components identified by shading, by(⚠) or by (⚠) in the circuit diagram are important for safety or for the characteristics of the unit. Always replace them with the exact replacement components.

(4) An insulation tube or tape is sometimes used and some components are raised above the printed wiring board for safety. The internal wiring is sometimes clamped to prevent contact with heating components. Install such elements as they were.

(5) After servicing, always check that the removed screws, components, and wiring have been installed correctly and that the portion around the serviced part has not been damaged and so on. Further, check the insulation between the blades of the attachment plug and accessible conductive parts.

1-2-2 Insulation Checking Procedure

Disconnect the attachment plug from the AC outlet and turn the power ON. Connect the insulation resistance meter (500V) to the blades of the attachment plug. The insulation resistance between each blade of the attachment plug and accessible conductive parts(see note) should be more than 1 Megohm.

Note : Accessible conductive parts include metal panels, input terminals, earphone jacks, etc.

1-3 ESD Precautions

Electrostatically Sensitive Devices (ESD)

Some semiconductor (solid state) devices can be damaged easily by static electricity.
Such components commonly are called Electrostatically Sensitive Devices(ESD). Examples of typical ESD devices are integrated circuits and some field-effect transistors and semiconductor chip components. The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

(1) Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.

(2) After removing an electrical assembly equipped with ESD devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.

(3) Use only a grounded-tip soldering iron to solder or unsolder ESD devices.

(4) Use only an anti-static solder removal devices. Some solder removal devices not classified as “anti-static” can generate electrical charges sufficient to damage ESD devices.

(5) Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ESD devices.

(6) Do not remove a replacement ESD device from its protective package until immediately before your are ready to install it.(Most replacement ESD devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive materials).

(7) Immediately before removing the protective materials from the leads of a replacement ESD device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION : Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

(8) Minimize bodily motions when handling unpackaged replacement ESD devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ESD device).

1-4 Handling the optical pick-up

The laser diode in the optical pick up may suffer electrostatic breakdown because of potential static electricity from clothing and your body.

The following method is recommended.

(1) Place a conductive sheet on the work bench (The black sheet used for wrapping repair parts.)

(2) Place the set on the conductive sheet so that the chassis is grounded to the sheet.

(3) Place your hands on the conductive sheet(This gives them the same ground as the sheet.)

(4) Remove the optical pick up block

(5) Perform work on top of the conductive sheet. Be careful not to let your clothes or any other static sources to touch the unit.

- Be sure to put on a wrist strap grounded to the sheet.
- Be sure to lay a conductive sheet made of copper etc. Which is grounded to the table.

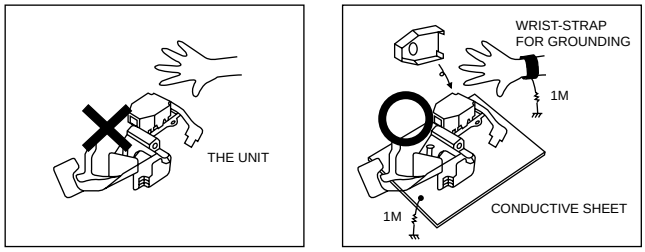

Fig.1-3

(6) Short the short terminal on the PCB, which is inside the Pick-Up ASS'Y, before replacing the Pick-Up. (The short terminal is shorted when the Pick-Up Ass'y is being lifted or moved.)

(7) After replacing the Pick-up, open the short terminal on the PCB.

2. Reference Information

2-1 Introduction to DVD

2-1-1 The Definition of DVD

DVD is the next generation medium and is the acronym of the Digital Versatile Disc or thr Digital Video Disc, which maximizes the saving density of the disk surface using the MPEG-2 compression technology to enable the storage of 17G bytes of data on the same size CD.

1) 7 times the storage capacity of the conventional CD

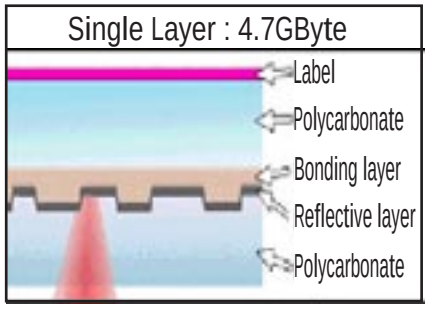
- Minimized the track pitch and pit size to 1/2 of conventional CD.
- Uses red laser with short-wavelenght of 650nm (635nm).

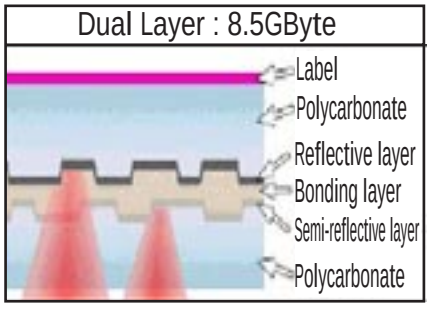
- **DVD Vs. CD-ROM**

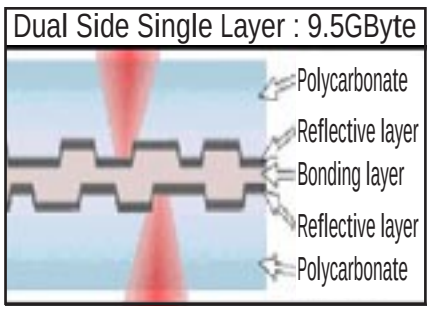
	CD-ROM	CD-R/RW	DVD-ROM	DVD-R/RW	DVD-RAM
Disc Thickness	1.2mm	1.2mm	0.6*2mm	0.6*2mm	0.6*2mm
Lens NA	0.45	0.45(0.5)	0.6	0.6	0.6
Laser wavelenght	780um	780um	650um	650um	650um
Track pitch	1.6pm	1.6pm	0.74pm	0.74pm	0.615pm
Capacity	0.65GB	0.65GB	4.7GB	4.7GB	4.7GB
Track structure	Pit train	Groove	Pit train	Groove	Land/Groove

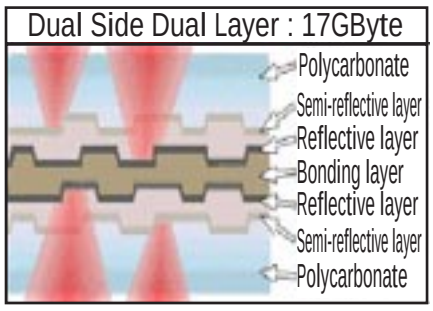
2) Disc Formats

DVD consists of two 0.6mm discs attached together, enabling access to the upper and lower side of the disk, and 4 sides could be used at maximum.









2-1-2 DVD Types

FORMAT	TYPE	APPLICATIONS
DVD-Video	Playback Only	High quality image and sound for movies and other video media.
DVD-ROM	Read Only	Multi-functional, multi-midia software that requires large storage capacity.
DVD-Audio	Playback Only	High quality sound that exceeds the CD, multi-channel Audio.
DVD-R	1 Time Recording	As with CD-R, write only once
DVD-RAM	Rewritable (more than 100,000times)	This can be virtually used as hard-disk, with a random read-write acess
DVD-RW	Rewritable (About 1000times)	Similar to DVD-RAM exiept than its technology features a sepueutial read-write access more like phonograph than a hord disk.

2-2 DVD-Video Fromat

2-2-1 Main Features

1) Able to store up to 160 minutes of Movie by utilizing the MPEG-2 compression technology. (Aver. 133min.)

2) Enables more than 500 lines of horizontal resolution. (Class corresponding to the Master Tapes used in broadcasting stations)

3) Provides Dolby Digital 5.1ch Surround 3D sound, which enables theater quality sound (NTSC area).
- For PAL areas, 1 of either MPEG-2 Audio or Dolby Digital must be selected.

4) Multi-Language
- Able to store up to 8 languages of dubbing.
- Able to store up to 32 subtitle languages.

5) Milti-Aspect Ratio
3TV Mode alternatives ; 16:9 Wide Screen (DVD Basic) / 4:3 Pan & Scan / Letter Box.

6) Multi-Story
Possible to implement Interactive Viewing which enables the user to select the scenario.

7) Multi-Angle
Able to view the camera angle you selected among the scenes recorded with multiple camera angles.

Note ; The above media features must have the DVD Title that contains the appropriate contents to function properly.

2-2-3 Detailed Feature

DVD-Video Feature 1 — **When Developing the DVD Software, various addition and modification is possible.**

As the storage capacity increases, the DVD-Video separates the main data and the additional data such as the Multi-Function into different data areas, enabling the control of time-data ratio to provide the format that enables the flexible Software development

- 1 Movie (3.5Mbps)
  + Subtitle (1 Language)
  + Surround Audio (1 Language)
  = 160min storage (4.673Gbytes)

- 1 Movie (3.5Mbps)
  + Subtitle (4 Language)
  + Surround Audio (4 Language)
  = 160min storage (4.680Gbytes)

- 1 Music Video (4Mbps)
  + 2ch High quality Audio (96kHz/24bit)
  = 72min storage (4.648Gbytes)

DVD-Video Feature 2 — **Application of the MPEG-2 compression technology.**

DVD-Video uses the variable compresion technology, the MPEG-2 to compress the moving image optimally, minimizing the Data loss to Provide a clear, natural screen while increasing the storage time.

DVD-Video	• MPEG-2 (Variable compression : Max. 1/40) • Field unit compression. • Compression rate change according to the amount of Data. • Differentiates the still image anf the moving image compression rete, reducing Data loss and enables efficient compression.	Video-CD	• MPEG-1 (Fixed compression : Max. 1/140) • Frame unit compression. • Compresses all data using the same ratio. - Fast movements are jagged, and unnatural	
DVD-Video Feature 3 | **High quality surround audio.**

DVD-Video can store the audio using the 5.1ch Dolby Digital compression or the advanced Liner PCM method, providing the better-than-CD quality and theater like audio quality.

- Dolby Digital (AC-3)
  - Unlike the traditional Dolby pro-Logic method, the Dolby Digital method separates all 5 main channels (Front L/R, Center, Surround (Rear) L/R)and the Sub woofer to provide live surround audio.
  - Using the Down Mix method, the conventional Dolby Pro-Logic and Stereo are all compatible.
  - Each separated channels are played back at CD quality sound. (Frequency band: 20Hz ~ 20KHz)

- Linear PCM (Pulse Code Modulation)
  - Provides the high quality Digital sound without the audio data compression.
  - Various Digital Recordings are possible as shown in the table to the right.

Sampling Frequency	Bit Rate
48KHz	16bit
	20bit
	24bit
96KHz	16bit
	20bit
	24bit

- Dolby Digital compatible Audio Mode

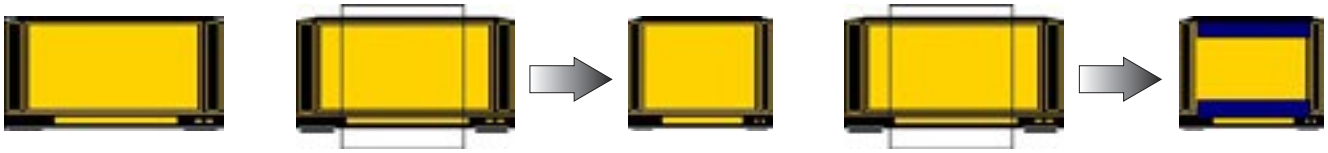
Audio Coding Mode	Channel Format					Remark
		Front		Surround (Rear)		
	L	C	R	L	R	
1/0		O				Mono
2/0	O		O			Stereo
3/0	O	O	O			Surround
2/1	O		O	Mono		
3/1	O	O	O	Mono		
2/2	O		O	O	O	
3/2	O	O	O	O	O	

DVD-Video Feature 4 — Multi-Language

- Audio Dubbing - Max. 8 Languages
- Subtitle - Max. 32 Languages. Capable of storing, and selectiong.
- Linear PCM (Pulse Code Modulation)

DVD-Video Feature 5 — Multi-Aspect

- Unlike the conventional VCD or LD, DVD-Video has the default of 16:9 Wide, and can be viewed using the conventional 4:3 TV, enabling the expansion of viewer selection capabilities.
  - 16 : 9 TV : Wide Mode (16:9 Wide Full Screen)
  - 4 : 3 TV : Letter Box Mode, Pan & Scan Mode

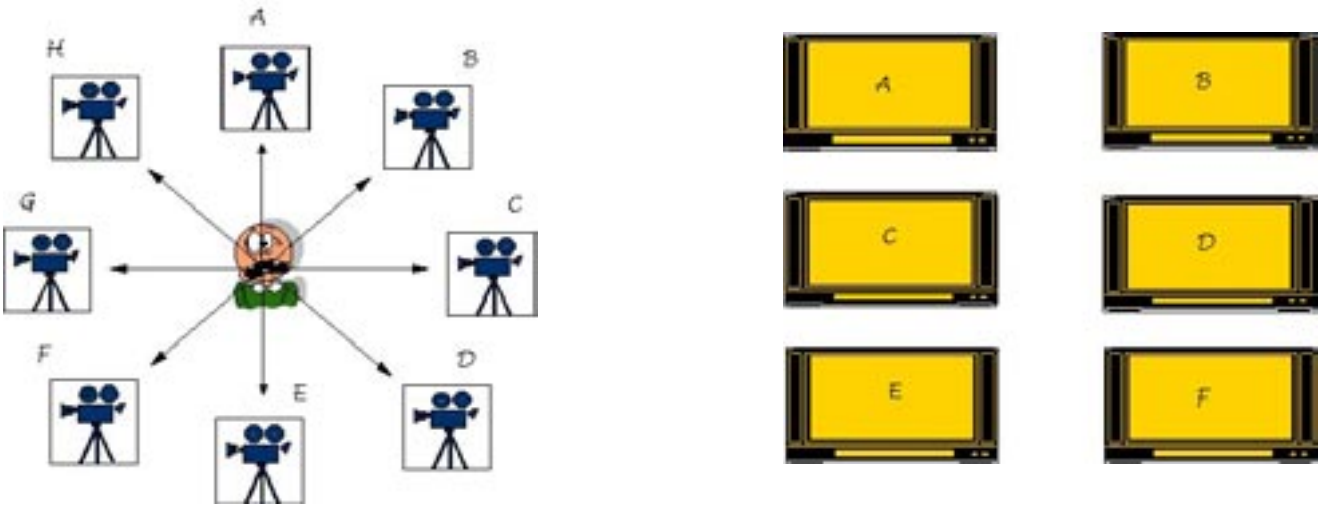


16:9 Wide 4:3 Pan & Scan 4:3 Letter Box

Note ; Only enable to be worked correctly by an appropriate data supported this function in Disc.

DVD-Video Feature 6 — Multi-Angle

- Up to 9 angles of view may be stored, enabling the viewer to select a specific viewpoint at a given time.
  --> Especially, for the Music Video and Sports Title, this provides a more lively image of the scene.



Note ; Only enable to be worked correctly by an appropriate data supported this function in Disc.

DVD-Video Feature 7 — **Multi-Story**

- DVD-Video provides the enviroment suitable for the bi-directional Software develoment, providing multiple scenarios. This feature enables the Multi-Story function.

OPTION — **Parental Lock**

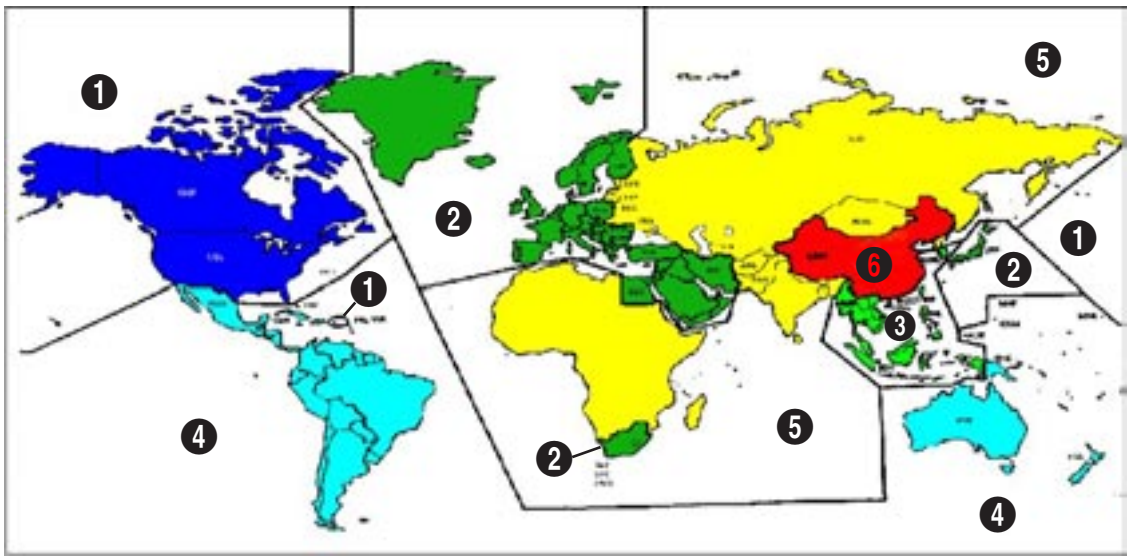
- For the titles that are not suitable for children viewing, Parental Locks are set, requesting user defined passwords for viewing
- Parential Locks may be set on specific frames of the Title, enabling the player to skip those frames during playback.

COPYRIGHT — **Regional Code & Macrovision**

- Classify the world into 6 regions, and if the DVD Title and the Player's "Reginal Code" do not agree, playback is prohibited.

- **Regionnal Coding is optional for the Soft developers (Region 0 All Code), but the Hardware developers must adopt the appropriate regionnal code for sale.**

  - Region 1 : The United States and its territories, Canada.
  - Region 2 : Europe, Japan, Greenland, Egypt, South Africa, the Middle East.
  - Region 3 : Taiwan, Hongkong, Korea, South East Asia.
  - Region 4 : Mexico, South America, Australia, New Zealand.
  - Region 5 : Russia, Eastern Europe, India, Africa.
  - Region 6 : China. • Region 0 : Worldwide (All Code)

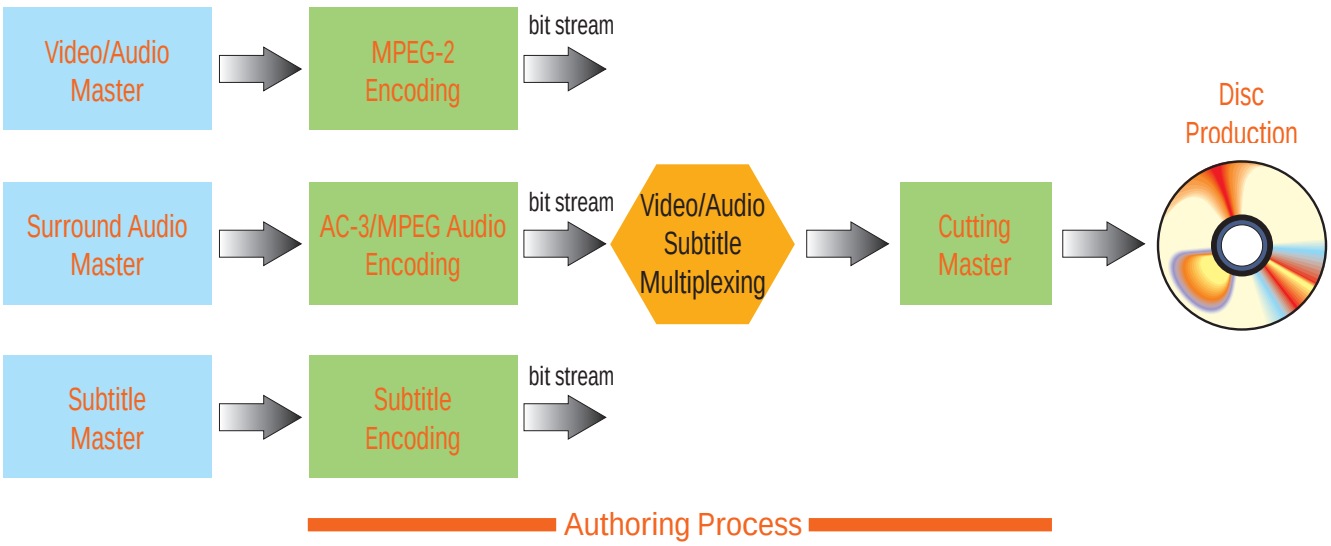


- Adoptation of the Macrovision System disables the copying on to other media.

Remark | **DVD-Video Authoring Process**

- The image quality of the DVD-Video may vary accoring to the quality of the Master and the Authoring Process
  - The image quality of the DVD-Video varies according to the Digital Mastering Source such as the conventional LD, VCD, or Original Film.
  - Different Authoring Process are used accoring to the Software developers, and this may affect the DVD image quality.

- **Authoring Process**



2-3 Flash & Drive Firmware Update of a DVD Recorder-VCR

WARNING

It is very important ; please read the below notice before updating your unit.
The following events may interrupt the update process and MAY RESULT IN PERMANENT DAMAGE TO THE UNIT WHILE UPDATING.

- Unplugging the power cord.
- Power Outage.
- Dirt or Scratch in the disc.
- Open a disc tray during processing.

2-3-1 Main Flash Update procedure

1) Press OPEN / CLOSE to open the disc tray.
2) Insert the update CD-R disc, label facing up.
3) Press OPEN / CLOSE to close the disc tray.

[Remote Control]

After checking old and new version, select "Yes" or "No" with "◀" or "▶ " on the remote control.
* The indication of Version is "YYMMDD.xx.ModelName"

* If you can't see the message above, try to use other new disc instead of current one.
Generally, this caused by disc quality and by disc creating problem.

4) Press the ENTER button on the remote control.

You can see "LOAD" on Front Display.

5) It takes about 5 minutes to finish a update.
The message on the screen will be displayed after finishing a update and the tray will be opened automatically. And then do not turn off the unit until it goes off automatically.

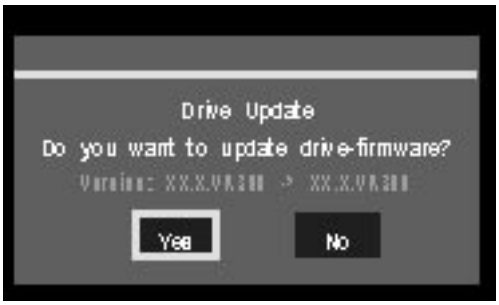
* If the message above isn't displayed after 10 minutes more and you can conclude that this unit had a critical damage after a Power off, replace a old flash with new one due to Flash memory's Damage.
(Location No. : DIC3 - Main PCB)

6) After removing a update disc, turn on the unit with power button and press REW and FF button on the front panel at the same time during 5 seconds. "CLR" will be displayed on the front display
The next screen will be displayed. Check the update version number. The Flash update is ended.

2-3-2 Drive Firm Update procedure

1) Press OPEN / CLOSE to open the disc tray.
2) Insert the update CD-R disc, label facing up.
3) Press OPEN / CLOSE to close the disc tray.
* It takes about 1~2 minutes to show below message.

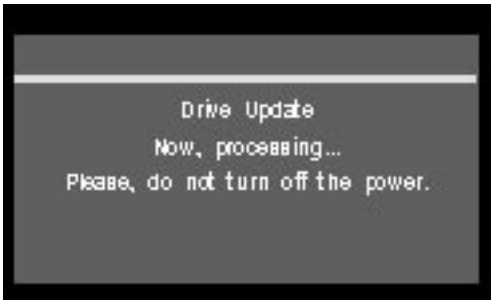
[Remote Control]



After checking old and new version, select "Yes" or "No" with "◀" or "▶ " on the remote control.
* The indication of Version is "YYMMDD.xx.ModelName"

* If you can't see the message above, try to use other new disc instead of current one.
Generally, this caused by disc quality and by disc creating problem.

4) Press the ENTER button on the remote control.



You can see "LOAD" on Front Display.

5) It takes about 1~2 minutes to finish a update.
The message on the screen will be displayed after finishing a update and the tray will be opened automatically. And then do not turn off the unit until it goes off automatically.

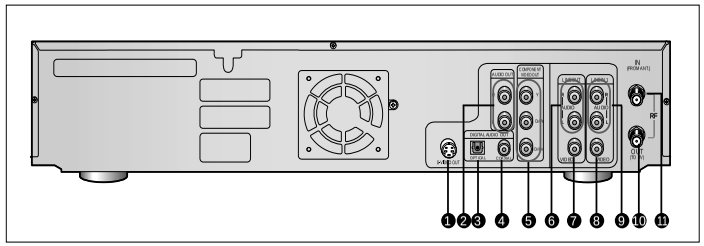
6) After removing a update disc, turn on the unit with power button and press REW and FF button on the front panel at the same time during 5 seconds.
"CLR" will be displayed on the front display and next screen will be displayed.
Check the update version number. Finally, the Drive Firmware update is ended.

3. Product Specification

General	Power requirements	120V AC,60Hz
	Power consumption	45Watts
	Weight	9.03lb
	Dimensions	16.9in(W) x 10.6in(D) x 3.1in(H)
	Operating temp	+5°C to 35°C
	Other conditions	Keep level when operating. Less than 75% operating humidity
Input	Video	1.0 V p-p at 75ohm load, sync negative
		S-Video input (Y:1.0Vp-p,C: 0.286Vp-p at 75ohm load)
	Max.Audio Input Level	2Vrms
	DV Input	IEEE 1394(4P) compatible jack
	Receivable Channels	Regular TV broadcasting : VHF (2~13), UHF (14~69)
		Cable TV broadcasting: 1~125
Output	Audio	Audio output jacks 1,2
		Optical/coaxial digital audio support
		Max. 0.005% total harmonic distortion (T.H.D) *at average 1 kHz
	Video	Video output jacks 1,2
		S-Video output 1 (Y: 1.0Vp-p, C:0.286Vp-p at 75 ohm load)
		Component output
		(Y: 1.0Vp-p ,Pb:0.70Vp-p, Pr:0.70Vp-p at 75ohm load)
DVD	Picture compression format	MPEG-II
	Audio compression format	Dolby AC-3 256kbps
	Recording Quality	XP (about 8Mbps), SP (about 4Mbps), LP (about 2Mbps), EP (about 1.2Mbps)
	Video S/N ratio	Min. 50dB at standard recording
	Audio S/N ratio	Min. 75dB
	Audio frequency characteristics	20 Hz ~ 20 KHz

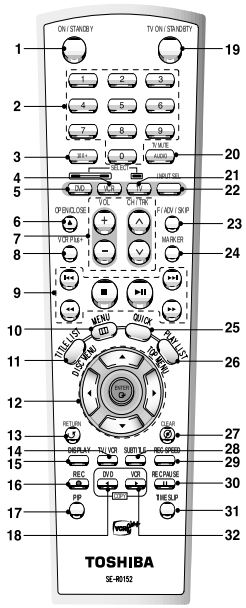
4. Operating Instructions

Rear Panel



1. S-VIDEO OUT JACK
2. AUDIO OUT L,R JACK
3. DIGITAL AUDIO OUT JACK (OPTICAL)
4. DIGITAL AUDIO OUT JACK (COAXIAL)
5. COMPONENT VIDEO OUT JACK
6. AUDIO OUT R,L JACK
7. VIDEO OUT JACK
8. VIDEO IN JACK
9. AUDIO IN R,L JACK
10. RF OUT TO TV JACK
11. RF ANTENNA INPUT JACK

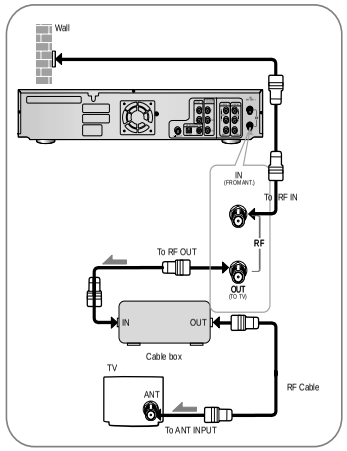
Tour of the Remote Control



1. POWER Button
2. NUMBER Button
3. 100+ Button
   Press this to select channel 100 or higher.
4. VCR Button
5. DVD Button
   Press this when you use a DVD.
6. OPEN/CLOSE Buttons
   To open and close the disc tray.
7. TV Control Button
   - VOLUME Button
     TV volume adjustment
   - CHANNEL Button
     Use this to select a TV channel.
8. VCR Plus+ Button
   Use to recording using VCR Plus+ function.
9. Playback-related Buttons
   Forward/Rewind, Search, Skip, Stop, Play/Pause
10. MENU Button
    Brings up the DVD Recorder-VCR's setup menu.
11. TITLE LIST(DISC MENU) Button
    Use this to enter the View Recording list/disk menu.
12. ENTER/DIRECTION Buttons
    (UP/DOWN or LEFT/RIGHT Buttons)
    This button functions as a toggle switch.
13. RETURN Button
    Returns to a previous menu.
14. TV/VCR Button
15. DISPLAY Button
    This will display current setting or disc status.
16. REC Button
    Use to make a recording on DVD-RAM/-RW/-R discs.
17. PIP Button
    Use to watch a subprogram on the PIP screen while watching the main program on the main screen.
18. DVD COPY Button
    Press this when you copy VCR to DVD.
19. TV POWER Button
20. AUDIO/TV MUTE Button
    Use this to access various audio functions on a disc (DVD mode).
    This operates as sound mute. (TV mode)
21. TV Button
    Press this to operate TV.
22. INPUT Button
    Select line input signal in external input mode(Tuner or Line input)
23. F.ADV/SKIP Button
24. MARKER Button
    Use this to bookmark a position while playing a disc.
25. QUICK Button
    Use this to view the status of the disc that is being played.
26. PLAY LIST(TOP MENU) Button
    Use this to return to the Top menu, or to view the recorded files list.
27. CLEAR Button
28. SUBTITLE Button
    Press this to switch the DVD's subtitle language.
29. REC SPEED Button
30. REC PAUSE Button
    Use this to pause during recording.
31. TIME SLIP Button
32. VCR COPY Button
    Press this when you copy DVD to VCR.

Method 3 : Antenna + DVD Recorder-VCR + Cable box +TV : Cable box with a few scrambled channels

You can record non-scrambled channels by selecting the channel on the cable box. You cannot record scrambled channels that require a cable box.



Step 3: Connecting the Video Cable

There are several ways to connect your DVD Recorder-VCR. Select one of the following video connecting methods that best suits you below.

- Method 1 : Connecting to a Video input jack
- Method 2 : Connecting to an S-video input jack
- Method 3 : Connecting to Component video input jacks in 480i mode
- Method 4 : Connecting to Component video input jacks in 480p mode

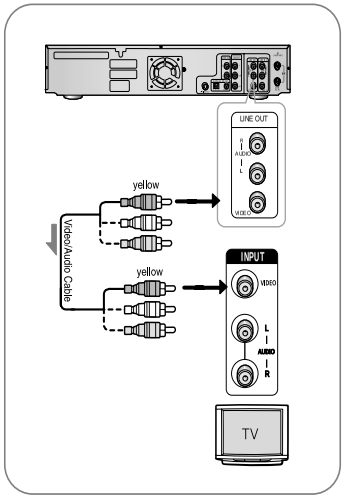
S-Video, Component video and Progressive Output Modes

- S-Video and Component video output are available only if your TV supports S-Video input or Component video input, respectively. If S-Video or Component video output does not work, check the TV connections and the TV input selection settings.
- Compared to standard interlaced video, progressive scan doubles the amount of video beam lines fed to your TV, resulting in a more stable, flicker-free, and clear image than interlaced video. The progressive scan video output jack is used in progressive output mode. This is only available with TVs that support progressive scan.
- Consumers should note that not all high definition television sets are fully compatible with this product and may cause artifacts to be displayed in the picture. If you experience 480 progressive scan picture problems, it is recommended that you switch the connection to the 'standard definition' output. If there are questions regarding TV set compatibility with this unit, please contact our customer service center.

Method 1 : Connecting to a video input jack

Connect a video(yellow) cable between the VIDEO (yellow) OUT jack on DVD Recorder-VCR and VIDEO(yellow) IN jack on the TV(or AV amplifier).

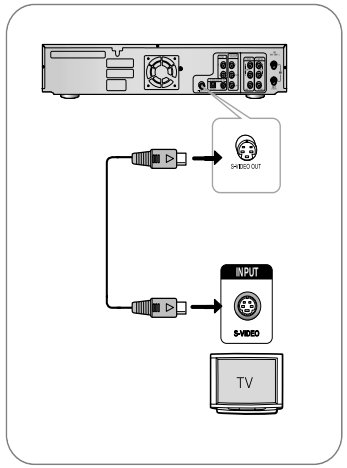
- You will enjoy regular quality images.
- Connect audio cables (white and red) between the ANALOG AUDIO OUT jack on the DVD Recorder-VCR and AUDIO IN jack on TV (or AV amplifier).



Method 2 : Connecting to an S-video input jack

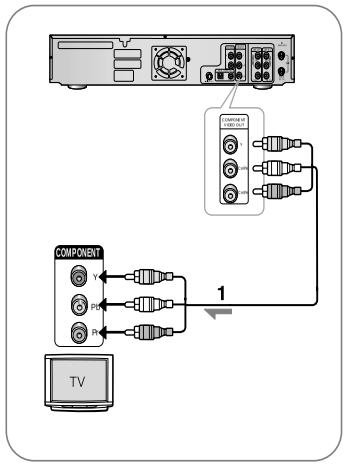
Connect an S-video cable(not supplied) between the S-VIDEO OUT jack on DVD Recorder-VCR and S-VIDEO IN jack on the TV (or AV amplifier).

- You will enjoy high quality images. S-Video separates the picture element into black and white (Y) and color (C) signals to present clearer images than regular video input mode.



Method 3 : Connecting to Component video input jacks(Y,CB/TB,CR/PB) in 480i mode

1. Connect Component video cables(not supplied) between the COMPONENT VIDEO OUT jacks on DVD Recorder-VCR and COMPONENT VIDEO IN jacks on the TV (or AV amplifier).
2. Make sure that the disc has stopped completely before changing the mode.
   If anything is not displayed on front panel display, it is 480i Mode.



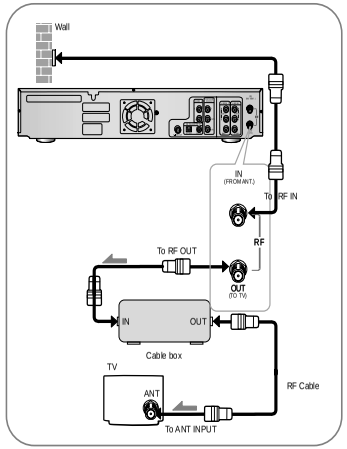
- You will enjoy high quality accurate color reproduction. Component video separates the picture element into black and white (Y), blue (Pb) and red (Pr) signals to present most clear and clean images.

Note

- Make sure that the color coded connections match. The Y, Pb and Pr component output jacks of your DVD Recorder-VCR must be connected to the exact corresponding component input jacks on your TV. Otherwise, red or blue images will be displayed on the TV screen.
- Make sure that the left and right audio output jacks of your DVD Recorder-VCR are connected to the left and right audio input jacks of your TV, respectively.(page 20)

Method 3 : Antenna + DVD Recorder-VCR + Cable box +TV : Cable box with a few scrambled channels

You can record non-scrambled channels by selecting the channel on the cable box. You cannot record scrambled channels that require a cable box.



Step 3: Connecting the Video Cable

There are several ways to connect your DVD Recorder-VCR. Select one of the following video connecting methods that best suits you below.

- Method 1 : Connecting to a Video input jack
- Method 2 : Connecting to an S-video input jack
- Method 3 : Connecting to Component video input jacks in 480i mode
- Method 4 : Connecting to Component video input jacks in 480p mode

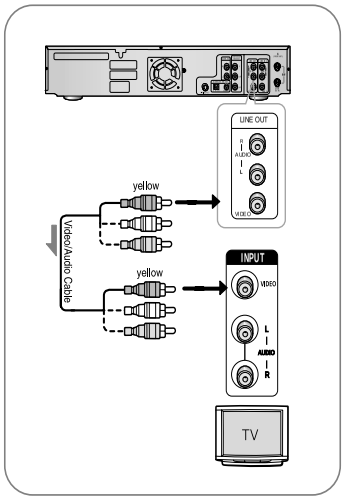
S-Video, Component video and Progressive Output Modes

- S-Video and Component video output are available only if your TV supports S-Video input or Component video input, respectively. If S-Video or Component video output does not work, check the TV connections and the TV input selection settings.
- Compared to standard interlaced video, progressive scan doubles the amount of video beam lines fed to your TV, resulting in a more stable, flicker-free, and clear image than interlaced video. The progressive scan video output jack is used in progressive output mode. This is only available with TVs that support progressive scan.
- Consumers should note that not all high definition television sets are fully compatible with this product and may cause artifacts to be displayed in the picture. If you experience 480 progressive scan picture problems, it is recommended that you switch the connection to the 'standard definition' output. If there are questions regarding TV set compatibility with this unit, please contact our customer service center.

Method 1 : Connecting to a video input jack

Connect a video(yellow) cable between the VIDEO (yellow) OUT jack on DVD Recorder-VCR and VIDEO(yellow) IN jack on the TV(or AV amplifier).

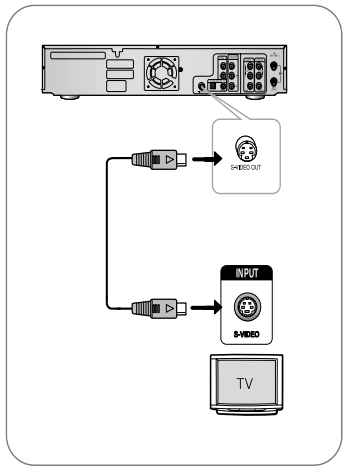
- You will enjoy regular quality images.
- Connect audio cables (white and red) between the ANALOG AUDIO OUT jack on the DVD Recorder-VCR and AUDIO IN jack on TV (or AV amplifier).



Method 2 : Connecting to an S-video input jack

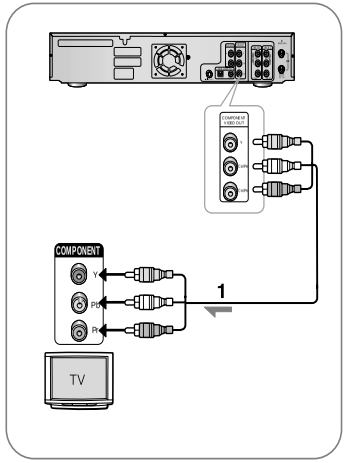
Connect an S-video cable(not supplied) between the S-VIDEO OUT jack on DVD Recorder-VCR and S-VIDEO IN jack on the TV (or AV amplifier).

- You will enjoy high quality images. S-Video separates the picture element into black and white (Y) and color (C) signals to present clearer images than regular video input mode.



Method 3 : Connecting to Component video input jacks(Y,CB/TB,CR/PB) in 480i mode

1. Connect Component video cables(not supplied) between the COMPONENT VIDEO OUT jacks on DVD Recorder-VCR and COMPONENT VIDEO IN jacks on the TV (or AV amplifier).
2. Make sure that the disc has stopped completely before changing the mode.
   If anything is not displayed on front panel display, it is 480i Mode.



- You will enjoy high quality accurate color reproduction. Component video separates the picture element into black and white (Y), blue (Pb) and red (Pr) signals to present most clear and clean images.

Note

- Make sure that the color coded connections match. The Y, Pb and Pr component output jacks of your DVD Recorder-VCR must be connected to the exact corresponding component input jacks on your TV. Otherwise, red or blue images will be displayed on the TV screen.
- Make sure that the left and right audio output jacks of your DVD Recorder-VCR are connected to the left and right audio input jacks of your TV, respectively.(page 20)

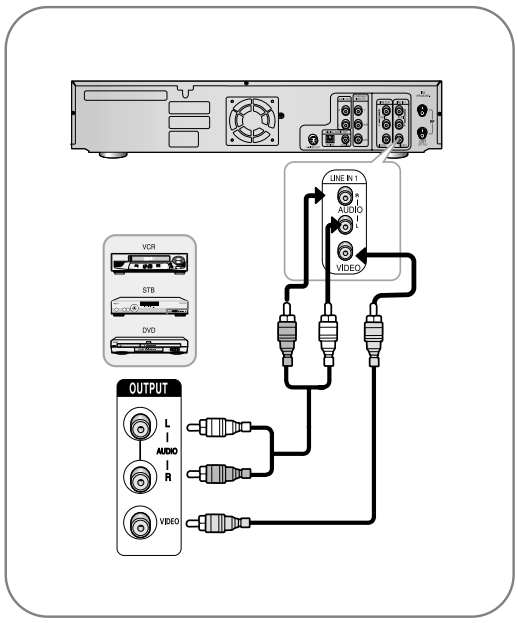
Step 5 : Connecting External Devices

This allows you to connect your DVD Recorder-VCR to other external devices and view or record their outputs.

- **Method 1** : Connecting a VCR, Set-Top Box(STB) or DVD player to the AUDIO/VIDEO LINE IN 1 jacks.
- **Method 2** : Connecting a Camcorder to the LINE IN 2 in jacks.
- **Method 3** : Connecting a Camcorder to the DV IN jack.

Method 1 : Connecting a VCR, Settop Box(STB) or DVD player to the AUDIO/VIDEO LINE IN 1 jacks

Connecting a VCR or external device to AUDIO/VIDEO LINE IN 1 jacks of the DVD Recorder-VCR.
You can record a copy free contest from connected equipment (VCR, STB or DVD).

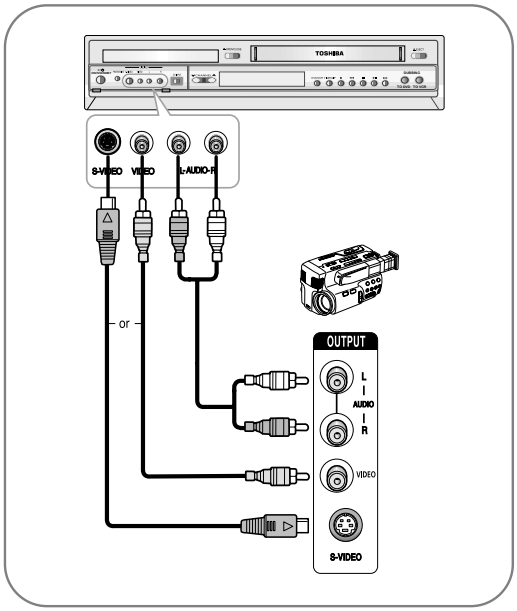


Note

- You can also use the LINE IN 2 jacks on the front panel of the DVD Recorder-VCR.
- When the S-Video jack and Video jack are both connected, the S-Video jack will have priority. Line Selection will be automatically done.
- Copy protected content cannot be recorded.

Method 2 : Connecting a Camcorder to the LINE IN 2 jacks

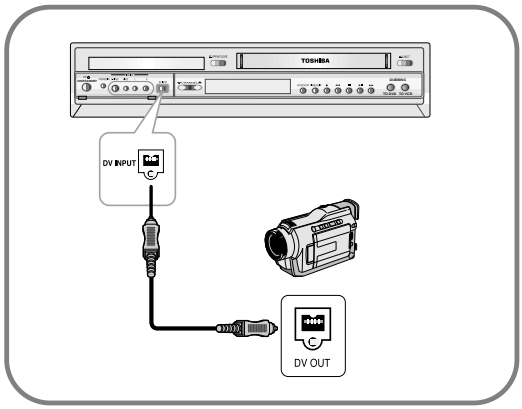
You can also use the LINE IN 2 jacks on the front panel of the DVD Recorder-VCR. You can record from connected equipment.
When an input source is inserted into LINE IN 2 while viewing TV, the input will be switched to LINE IN 2 automatically.



Method 3 : Connecting a Camcorder to the DV IN jack

If your camcorder has a DV output jack, connect it to the DV input jack of your DVD Recorder-VCR.

- If your camcorder has a DV output jack, see page 69 for more information.



- Some models of DV format digital video cameras may support a different compression format. From such equipment, recording is not possible.
- Depending on the models of DV format digital video cameras, recording may not work properly or some functions may be disabled.

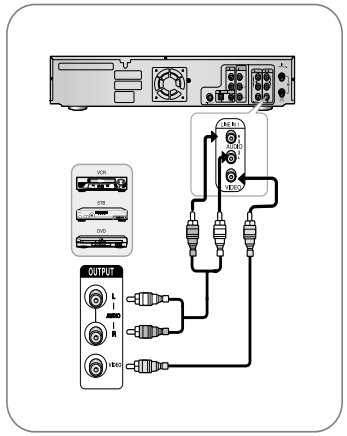
Step 5 : Connecting External Devices

This allows you to connect your DVD Recorder-VCR to other external devices and view or record their outputs.

- **Method 1** : Connecting a VCR, Set-Top Box(STB) or DVD player to the AUDIO/VIDEO LINE IN 1 jacks.
- **Method 2** : Connecting a Camcorder to the LINE IN 2 in jacks.
- **Method 3** : Connecting a Camcorder to the DV IN jack.

Method 1 : Connecting a VCR, Settop Box(STB) or DVD player to the AUDIO/VIDEO LINE IN 1 jacks

Connecting a VCR or external device to AUDIO/VIDEO LINE IN 1 jacks of the DVD Recorder-VCR.
You can record a copy free contest from connected equipment (VCR, STB or DVD).

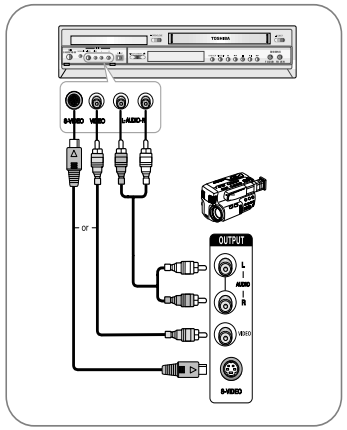


Note

- You can also use the LINE IN 2 jacks on the front panel of the DVD Recorder-VCR.
- When the S-Video jack and Video jack are both connected, the S-Video jack will have priority. Line Selection will be automatically done.
- Copy protected content cannot be recorded.

Method 2 : Connecting a Camcorder to the LINE IN 2 jacks

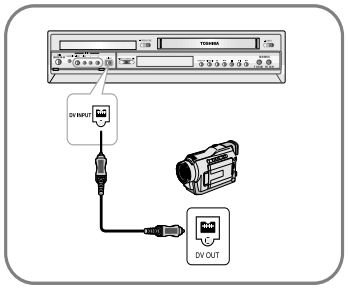
You can also use the LINE IN 2 jacks on the front panel of the DVD Recorder-VCR. You can record from connected equipment.
When an input source is inserted into LINE IN 2 while viewing TV, the input will be switched to LINE IN 2 automatically.



Method 3 : Connecting a Camcorder to the DV IN jack

If your camcorder has a DV output jack, connect it to the DV input jack of your DVD Recorder-VCR.

- If your camcorder has a DV output jack, see page 69 for more information.



- Some models of DV format digital video cameras may support a different compression format. From such equipment, recording is not possible.
- Depending on the models of DV format digital video cameras, recording may not work properly or some functions may be disabled.

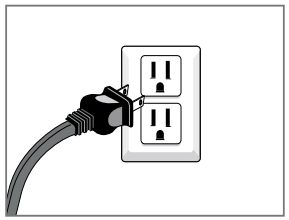
Step 6 : Connecting the Power Cord

After all connections are complete, plug the power cord in the wall outlet.

"AUTO" in the front panel display flickers. This means that the current time is being set automatically (Auto Program) through the antenna under connection. The setup may take several minutes.

When it normally operates, the current time is automatically set and displayed in the front panel display.

If "- - - -" appears, however, it means that auto time setting has failed.
In that case, set the current time through the manual clock set, as shown in pages 27~28.



Step 7 : Preparing the Remote Control

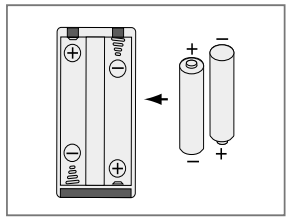
Install Batteries in the Remote Control

- Open the battery cover on the back of the remote.
- Insert two AA batteries. Make sure that the polarities (+ and -) are aligned correctly.
- Replace the battery cover.

If the remote does not operate properly:

- Check the polarity + - of the batteries (Dry-Cell)
- Check if the batteries are drained.
- Check if the remote sensor is blocked by obstacles.
- Check if there is any fluorescent lighting nearby.

Dispose of used batteries according to local environmental regulations. Do not put them in the household trash.



- Do not expose the remote sensor of the recorder to a strong light source such as direct sunlight or other illumination. If you do so, you may not be able to operate the recorder via the remote control.

Setting the Remote Control

Your VCR remote control will work with Toshiba televisions and compatible brands.

To determine whether your television is compatible, follow the instructions below.

1. Switch your television on.
2. Point the remote control towards the television.
3. Hold down the TV button and enter the two-figure code corresponding to the brand of your television, by pressing the appropriate numeric buttons.

Brand	Codes	Brand	Codes
SAMSUNG	01,14,15,23,31	LOEWE	28
SHARP	02,16,22	ZENITH	17
SONY	03	LG	06,08,18
RCA	07,29	MAGNAVOX	04
TOSHIBA	09	EMERSON	21
PANASONIC	12,24	SANYO	05,20
HITACHI	10	DAEWOO	19
NEWSAN	27	NOBLEX	25
JVC	11	TELEFUNKEN	26
MITSUBISHI	13	GRADIENT	30

Result: If your television is compatible with the remote control, it will switch off.
It is now programmed to operate with the remote control.

Note

■ If several codes are indicated for your television brand, try each one in turn until you find one that works.

You can then control the television using the following buttons.

Button	Function
POWER	Used to switch the television on and off.
INPUT SEL.	Used to select an external source.
VOL + or -	Used to adjust the volume of the television.
CH (∧ or ∨)	Used to select the required channel.
TV MUTE	Used to toggle the sound on and off.

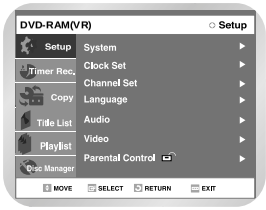
Note

■ The various functions will not necessarily work on all televisions. If you encounter problems, operate the television by using the TVs remote control.

System Setup

On-Screen Menu Navigation

The on-screen menus allow you to enable or disable various functions on your DVD Recorder-VCR. Use the following buttons to open and navigate through the on-screen menus.



1 MENU Button

Press this button on the remote control while the DVD or VCR is in Stop or Play mode to open the on-screen MAIN MENU.

2 Up/Down and Left/Right

Use these buttons to move the selection bar up/down and left/right to cycle through the menu options.

3 Enter Button

Press this button on the remote control to confirm any new settings.

4 Return Button

Press this button on the remote control to return to the last MENU screen displayed or to exit the on-screen MENU all together.

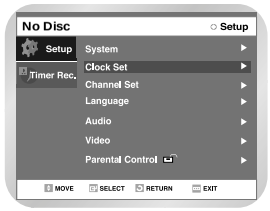
Auto Clock Set

This menu is used to set the current time. You need to set the time to use timer recording.

1 With the unit in Stop mode, press the MENU button.

2 Using the ▲▼ buttons, move the selection bar to "Setup" then press Enter to select.

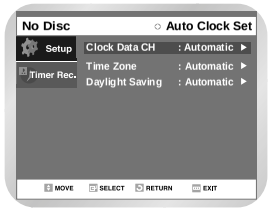
3 Select Clock Set using the ▲▼ buttons, then press the ► or ENTER button.



4 Select Auto Clock Set using the ▲▼ buttons, then press the ► or ENTER button.

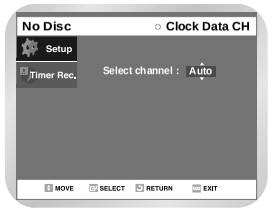
Note
- You must have the antenna connected to set the Auto Clock. See page Antenna Connections
- The Clock will be automatically set when you turn off the recorder.

5 Select the sub menu (Clock Data CH, Time Zone or Daylight Saving) using the ▲▼ buttons, then press the ► or ENTER button.



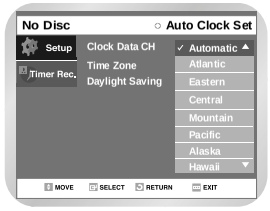
Clock Data CH

Select a channel that carries a time signal using the ▲▼ buttons then press the ► or ENTER button.
Select Auto to set the channel automatically.



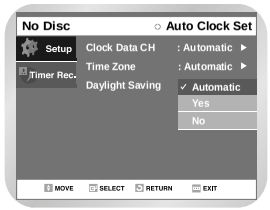
Time ZONE

Select the time zone of your area using the ▲▼ buttons then press the ► or ENTER button. Select Automatic to set the time zone automatically.



Daylight Saving

Select the On, Off or Auto using the ▲▼ buttons then press the ► or the ENTER button.
Select Automatic to set the daylight saving automatically.



Note
- If your clock is set to the wrong time zone or daylight saving, you can adjust these settings without turning off the Auto Clock Set function.

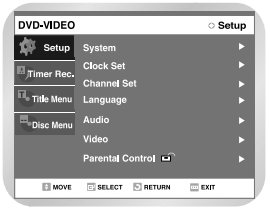
Manual Clock Set

If Auto Setup fails to set the DVD Recorder-VCR's internal clock by locating a local TV station, follow these steps to set the date and time manually.
NOTE: For accurate Timer Recording, your DVD Recorder-VCR's internal clock must be set correctly.

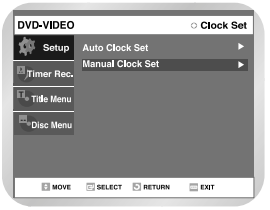
1 **Open "MENU"**
Press the MENU button while the DVD or VCR is in Stop or Play mode.

2 **Select "Setup"**
Using the ▲▼ buttons, move the selection bar to "Setup" then press ENTER to select.

3 **Select "Clock Set"**
Use the ▲▼ buttons to highlight "Clock Set" then press the ENTER button.



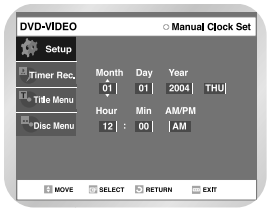
4 **Select "Manual Clock Set"**
Move the highlight to "Manual Clock Set", then press the ENTER button.
• The Clock Set will change as shown.



5 Set the Clock

Use the LEFT/RIGHT buttons to select each of the following options, then use the ▲▼ buttons to set each option:

- **Month** – Set the month
- **Day** – Set the day.
- **Year** – Set the year
- **Hour** – Set the hour
- **Minute** – Set the minute
- **AM/PM** – Set the AM/PM



Channel Set

This feature allows you to manually set the DVD Recorder-VCR's tuner band to Antenna or Cable, whichever you connected to the Antenna In jack during initial setup.

- Use this setting only if Auto Setup detected the incorrect tuner band, i.e. channels are coming in on the wrong channel numbers.

1 Open "MENU"

With the DVD in Stop press the MENU button.

2 Select "Setup"

Using the ▲▼ buttons, move the selection bar to "Setup" then press ENTER to select.

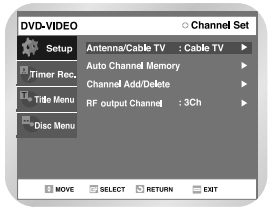
3 Select "Channel Set"

Using the ▲▼ buttons, move the selection bar to "Channel Set", then press ENTER to select.

4 Select "Antenna/Cable TV"

Move the selection arrow to "Antenna/Cable TV" then press right button to select from the following options:

- Antenna - Select if the DVD Recorder-VCR is connected to an indoor or outdoor VHF/UHF Antenna.
- Cable TV - Select if the DVD Recorder-VCR is connected to Cable TV.



Setting Up the Language Features

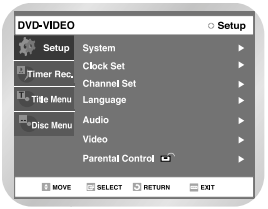
If you set the player menu, disc menu, audio and subtitle language in advance, they will come up automatically every time you watch a movie.

1

With the unit in Stop mode, press the MENU button on the remote.

2

Select Setup using ▲▼ buttons, then press the ► or ENTER button.



3

Select Language using ▲▼ buttons, then press the ► or ENTER button.
Language setup menu will be displayed.

4

Use ▲▼ buttons to select the desired sub menu and press the ENTER or ► button.

5

Select the desired Language using ▲▼ buttons, then press the ► or ENTER button.

Note

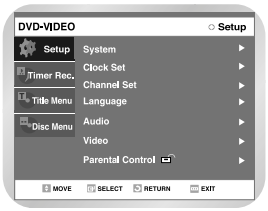
■ Press the RETURN or ◄ button to return to the previous menu. Press the MENU button to exit the menu.

Setting Up the Audio Options

If you set the player menu, disc menu, audio and subtitle language in advance, they will come up automatically every time you watch a movie.

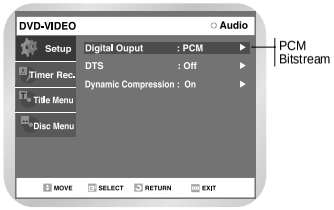
1 With the unit in Stop mode, press the MENU button on the remote.

2 Select Setup using ▲▼ buttons, then press the ► or ENTER button.



3 Select Audio using ▲▼ buttons, then press the ► or ENTER button.
Audio setup menu will be displayed.

4 Use ▲▼ buttons to select the desired sub menu and press the ENTER or ► button.



5 Use the ▲▼ buttons to select the desired item. Then press the RIGHT or ENTER button.

Note ■ Press the RETURN or ◄ button to return to the previous menu. Press the MENU button to exit the menu.

Digital Output

1. PCM : Converts to PCM(2CH) 48kHz audio. Select PCM when using the Analog Audio Outputs.
2. Bitstream : Converts to Dolby Digital Bitstream (5.1CH). Select Bitstream when using the Digital Audio Output.

Note ■ Be sure to select the correct Digital Output or no audio will be heard.

DTS

1. Off : Doesn't output digital signal.
2. On : Outputs DTS Bitstream via digital output only. Select DTS when connecting to a DTS Decoder.

Note ■ When DTS soundtrack is played, sound is not output from Analog Audio Output.

Dynamic Compression

1. On : To select dynamic compression.
2. Off : To select the standard range.

Setting Up the Display(Video) Options

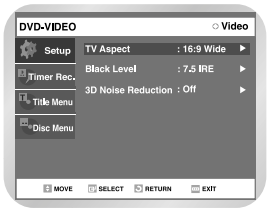
This function allows you to setup the TV screen settings.

1 With the unit in Stop mode, press the MENU button on the remote.
You can't use the Setup functions during playback.

2 Select Setup using ▲▼ buttons, then press the ► or ENTER button.

3 Select Video using ▲▼ buttons, then press the ► or ENTER button.
Video option menu will be displayed.

4 Select the sub menu using ▲▼ buttons, then press the ► or ENTER button.



5 Use the ▲▼ buttons to select the desired item. Then press the RIGHT or ENTER button.

Note ■ Press the RETURN or ◄ button to return to the previous menu. Press the MENU button to exit the menu.

Display(Video) Options

This function depends on disc type. It may not work for some disc types.

TV Aspect
Depending on the type of television you have, you may want to adjust the screen setting. (aspect ratio)

- **4:3 Letter Box** : Select when you want to see the total 16:9 ratio screen DVD supplies, even though you have a TV with a 4:3 ratio screen. Black bars will appear at the top and bottom of the screen.
- **4:3 Pan - Scan** : Select this for conventional size TV when you want to see the central portion of the 16:9 screen. (Extreme left and right side of movie picture will be cut off.)
- **16:9 Wide** : You can view the full 16:9 picture on your widescreen TV.

Black Level
Adjusts the brightness of the screen.

- **0 IRE** : This is the standard NTSC reference black level for consistent brightness/contrast across all sources.
- **7.5 IRE** : This will enhance the black level for increased brightness/contrast when viewing DVDs.

3D NR(Noise Reduction)

- **On** : Select to reduce noise from the screen
- **Off** : Normal

Setting Up the Parental Control

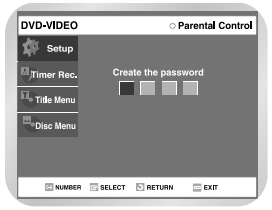
The Parental Control function works in conjunction with DVDs that have been assigned a rating - which helps you control the types of DVDs that your family watches. There are up to 8 rating levels on a disc.

1 With the unit in Stop mode, press the MENU button on the remote.

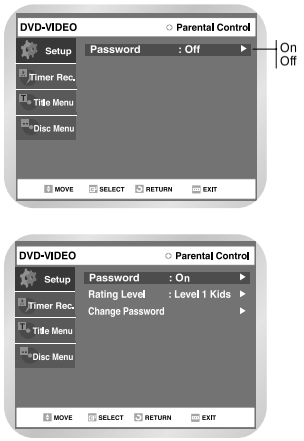
2 Select Setup using ▲▼ buttons, then press the ► or ENTER button.

3 Select Parental control using ▲▼ buttons, then press the ► or ENTER button.

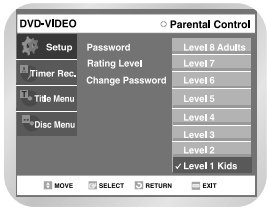
4 Enter the 4-digit password using the 0 to 9 buttons on the remote.
- The 'Confirm the password.' message will be displayed. Enter your password again.



5 Select Password ON/OFF using ► and ▲▼ buttons.



6 Select Rating Level you want using ▲▼ buttons, then press the ► or ENTER button.
- For example, if you select up to Level 6, discs that contain Level 7, 8 will not play. Larger number indicates the program is more intended to adult use only



Note
- Press the RETURN or ◄ button to return to the previous menu. Press the MENU button to exit the menu.
- Refer to Troubleshooting if you forget your password.

About the Change Password;

1 Select Change Password using ▲▼ buttons, then press the ► or ENTER button.
- The 'Enter the password.' message will be displayed.

2 Enter the 4-digit password using the 0 to 9 buttons on the remote.
- The 'Confirm the password.' message will be displayed.

3 Enter your password again using the 0 to 9 buttons on the remote.

Note
- Press the RETURN or ◄ button to return to the previous menu. Press the MENU button to exit the menu.

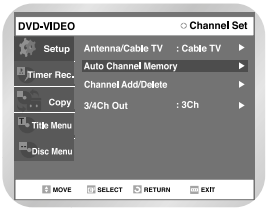
Auto Channel Memory

Auto Channel Memory will automatically seek and store all active channels in your area.

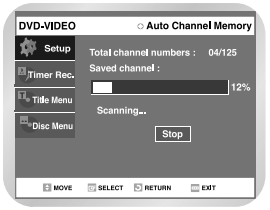
1 Open "MENU"
With the DVD in stop mode, press the MENU button.

2 Select "SETUP"
Using the ▲▼ buttons, move the selection bar to "Setup" then press ENTER to select.

3 Select "Channel Set"
Using the ▲▼ buttons, move the selection bar to "Channel Set", then press ENTER to select.



4 Run "Auto channel memory"
Move the selection arrow to "Auto Channel Memory," then press ENTER to select.
- The DVD Recorder-VCR will automatically search for all available channels in the selected Tuner Band. This procedure may take a few minutes to complete.
- When finished, the lowest channel found will be displayed.



•Press ENTER button to STOP or cancel scanning.

Channel Add/Delete

Use this feature if Auto Channel Search missed a channel that you would like to add and delete a channel you wish to remove.

1 Open “MENU”

With the DVD in stop mode, press the MENU button.

2 Select “Setup”

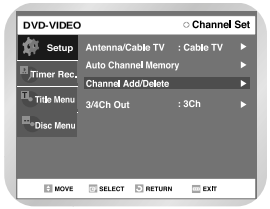
Using the ▲▼ buttons, move the selection bar to “Setup” then press ENTER to select.

3 Select “Channel Set”

Using the ▲▼ buttons, move the selection bar to “Channel Set”, then press Enter to select.

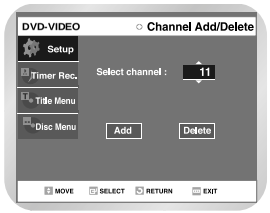
4 Select “Channel Add/Delete”

Move the selection bar to “Channel Add/Delete,” then press ENTER to select.



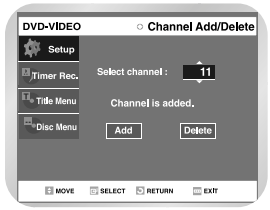
5 Select Channel to Add/Delete

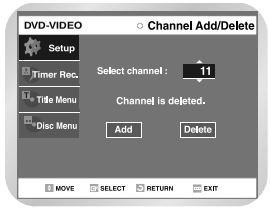
Use the CH ∧/∨ buttons to tune in the channel number you wish to add or delete.
Use the number buttons to move the channel directly. If you use the navigation ∧/∨ button, the channel will be moved to the next memorized channel.



6 Add/Delete Channel.

Press Enter to move the cursor to select Add, then press ► if you want to select Delete. Press ENTER to confirm your selection.





RF Output Channel

When you connect the DVD Recorder-VCR to TV with RF Antenna Cable, follow the steps below to set the RF output channel.

1 Open “MENU”

With the DVD in Stop or Play mode, press the MENU button.

2 Select “Setup”

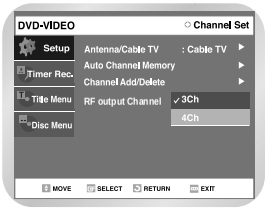
Using the ▲▼ buttons, move the selection bar to “Setup” then press ENTER to select.

3 Select “Channel Set”

Using the ▲▼ buttons, move the selection bar to “Channel Set,” then press ENTER to select.

4 Select “RF Output Channel”

Move the selection bar to “RF output Channel”, then press right to change.



5 Change “RF Output CH”

Select channel 3 or 4 using the ▲▼ button. Then press ENTER to change.

6 Change “TV Channel”

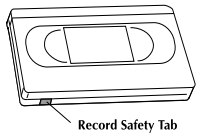
A message will appear on your TV. When the message disappears, change your TV to channel 3 or 4 to match the RF output channel of the player.

VCR Setting

If you want your videotapes to play automatically when you insert them, turn on Auto Play.

Note

■ Only tapes that are missing the Record Safety Tab will play automatically when inserted.

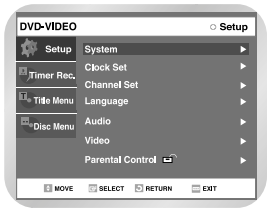


1 Open “MENU”

With the VCR in Stop or Play mode, press the MENU button.

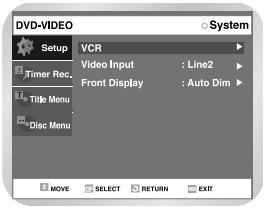
2 Select “System”

Use the ▲▼ buttons to highlight “System” then press the ENTER button.



3 Select “VCR”

Using the ▲▼ buttons, move the selection bar to “VCR”, then press ENTER to select.



4 Select “Tape Length”

Press the RIGHT button to select the Tape Length. This information is usually printed on the tape box. The menu cycles through: T-120, T-160 or T-180. Once the type of cassette is set, the VCR can display the amount of time remaining on the tape when you press the INFO. button.

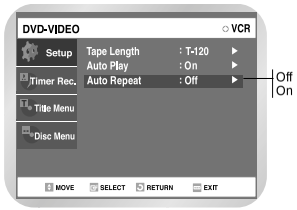
5 Select “Auto Play”

Move the selection bar to “Auto Play,” then press right button to select from the following options:

- On - The VCR will automatically begin playing a video tape when it is inserted, as long as the safety tab of the cassette has been removed.
- Off - Auto play is disabled.

6 Select “Auto Repeat”

Move the selection bar to “ Auto Repeat”. It sets the VCR to play a tape repeatedly [unless a tape control is activated (Stop, Fast Forward or Rewind)].



Video Input

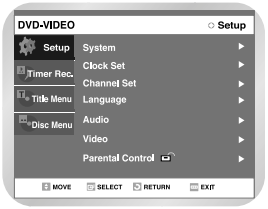
If you watch video through Line 2, you can choose Composite or Super(S)-video.

1 Open “MENU”

With the DVD Recorder-VCR in stop or play mode, press the MENU button.

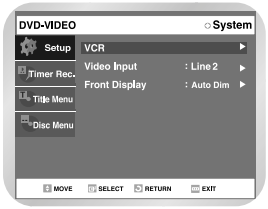
2 Select “Setup”

Using the ▲▼ buttons, move the selection bar to “Setup” then press ENTER to select.



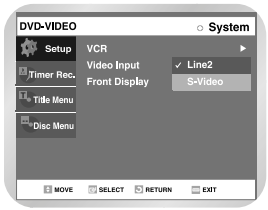
3 Select “System”

Use the ▲▼ buttons to highlight “System” then press the ENTER button.



4 Select “Video Input”

Use the ▲▼ buttons to highlight “Video Input”, then press ENTER button and choose Line 2 (Composite) or S-Video.



Front Display

You can set the Front Panel Display to be bright all the time, dim all the time, dim during power off.

1 Open " MENU"

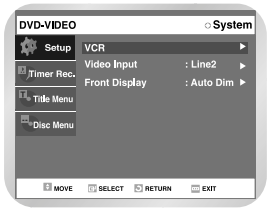
With the DVD in Stop or Play mode, press the MENU button. .

2 Select "Setup"

Using the ▲▼ buttons, move the selection bar to "Setup" then press ENTER to select.

3 Select "System "

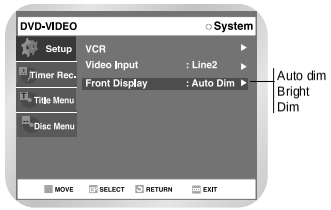
Using the ▲▼ buttons, move the selection bar to "System " then press ENTER to select.



4 Set "Front Display"

Move the selection bar to "Front Display," then press RIGHT button to select from the following options:

- Auto dim – Front Panel Display will dim automatically during power off.
- Bright – Front Panel Display will be bright all the time.
- Dim – Front Panel Display will be dim all the time.



Playback

This section introduces basic functions of playback by disc type.

Dolby Digital | DTS | Digital Audio

Stereo | NTSC broadcast system in U.S.A, Canada, Korea, Japan,etc. | MP3

Before Playing

Preliminary

Read the following information before playing a disc.

Region code (DVD-Video only)

Both the DVD Recorder-VCR and the discs are coded by region. These regional codes must match in order for the disc to play. If the codes do not match, the disc will not play. The Region Number for this DVD Recorder-VCR is described on the rear panel of the DVD Recorder-VCR.

Disc types that can be played

Disc Types	Disc Logo	Recorded content	Disc Shape	Max. Playing Time
DVD-VIDEO	DVD VIDEO	AUDIO + VIDEO	Single sided(5")	about 240
			Double sided(5")	about 480
			Single sided(3.5")	about 80
			Double sided(3.5")	about 160
AUDIO-CD		AUDIO	Single sided(5")	about 74
			Single sided(3.5")	about 20
JPEG CD-R/RW		JPEG Images	Single sided(5")	-
			Single sided(3.5")	-
MP3 CD-R/RW		MP3 Audio	Single sided(5")	-
			Single sided(3.5")	-
DVD-RAM	DVD RAM	AUDIO + VIDEO	Single sided (5") (4.7GB)	1(XP: Excellent Quality)
				2 (SP: Standard Quality)
				4 (LP: Long Playback)
				6 (EP: Extended)
			Double sided (5") (9.4GB)	2 (XP: Excellent Quality)
				4 (SP: Standard Quality)
				8 (LP: Long Playback)
				12(EP: Extended)
DVD-RW	DVD RW	AUDIO + VIDEO	5" (4.7GB)	1 (XP: Excellent Quality)
				2 (SP: Standard Quality)
				4 (LP: Long Playback)
				6 (EP: Extended)
DVD-R	DVD R	AUDIO + VIDEO	5" (4.7GB)	1 (XP: Excellent Quality)
				2 (SP: Standard Quality)
				4 (LP: Long Playback)
				6 (EP: Extended)

- You cannot play discs other than those listed above.
- You canot play DVD-RAM discs or non-standardized discs. etc., even if they may be labeled as above.
- This DVD video player uses the NTSC color system and cannot play DVD video discs recorded in any other color system(PAL, SECAM, etc...)

Because of problems and errors that can occur during the creation of DVD software and/or the manufacture of DVD discs. Toshiba America Consumer Products. Inc.., Toshiba Hawaii, Inc, and Toshiba of Canaga, Ltd. cannot guarantee that this player will play every feature of every DVD technology, Toshiba DVD players are manufactured to the highest standards of quality and, as a result, such incompatibilities are very rare. If you happen to experience and difficulty playing a DVD on a Toshiba DVD player, please feel free to call our contact listed in "How to Obtain Warranty Services."

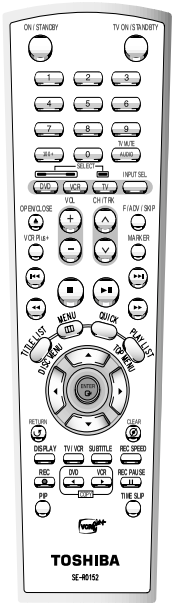
Discs that cannot be played

- DVD-Video with a region number other than “1” or “ALL”
- 3.9 GB DVD-R Disc for Authoring.
- DVD-RAM not recorded following the Video Recording Standard
- Unfinalized DVD-R recorded on other equipment.
- PAL discs
- DVD-ROM/DVD+RW/PD/MV-Disc/DiVX Video Disc, etc
- Video CD/CVD/SVCD/CD-ROM/CDV/CD-G/CD-I

Note

- This DVD Recorder-VCR can only operate with discs that are compatible with DVD-RAM Standard Version 2.0.
- Playback and/or recording may not work for some types of discs, or when specific operations, such as angle change and aspect ratio adjustment, are being performed. Information about the discs is written in detail on the box. Please refer to this if necessary
- Do not allow the disc to become dirty or scratched, Finger prints, dirt, dust, scratches or deposits of cigarette smoke on the recording surface may make it impossible to use the disc for recording.
- To protect a DVD-RAM disc from damage, use a cartridge.
- DVD-RAM/R/RW discs may not be able to play on some DVD players, depending on the player, disc and the condition of the recording.
- Discs with PAL programs recorded on them cannot be recorded using this product.

Playing a Disc



1 Press the OPEN/CLOSE button.

2 Place a disc gently into the tray with the disc's label facing up.

3 **Press OPEN/CLOSE button to close the disc tray.**

- Your DVD Recorder-VCR closes the disc tray and plays the disc automatically.
- When a recordable media (DVD-RAM, DVD-RW, DVD-R, etc.) is used, Auto Playback cannot be activated without pressing the Play button. When pressing the Power button while a disc is in the tray, the unit will be activated. Press PLAY to start playback.
- If you insert MP3 Disc, your DVD Recorder-VCR will display the file list on the screen and start.
- When a JPEG disc is inserted, folders and a file list are displayed in the Album format.

4 Press the STOP button to stop playback.

Note

- When you stop disc play, the recorder remembers where you stopped, so when you press PLAY button again, it will pick up where you left off. (unless the disc is removed or the recorder is unplugged, or if you press the STOP button twice.) This function is only applicable to DVD-VIDEO, DVD-RAM, DVD-RW, DVD-R or audio CDs (CD-DA).

CAUTION

- Do not move your DVD Recorder-VCR while playing, as this may cause damage to the disc.
- Make sure to press the OPEN/CLOSE button to open or close the disc tray.
- Do not push the disc tray while it is being opened or closed, as this may cause a product malfunction.
- Do not place foreign materials on or in the disc tray.
- Some functions may perform differently or be disabled depending on the disc type. If this occurs, refer to the instructions written on the disc case.
- Be especially careful that children's fingers are not caught between the disc tray and the tray chassis when it closes.
- After turning power on, it will take a few seconds until the DVD operates.

Using the Search & Skip Functions

Searching through a Chapter or Track

During play, press the SEARCH ◀◀ or ▶▶ button on the remote control. The playback speed will change as follows.

DVD-VIDEO/ DVD-RAM/DVD-RW DVD-R	PLAY→FF1/FR1→FF2/FR2→ FF3/FR3→FF4/FR4→FF5/FR5→ FF6/FR6
AUDIO CD(CDDA)	PLAY→FF1/FR1→FF2/FR2→ FF3/FR3

• You can scan the program in reverse order.
To return to normal speed playback, press the ▶II button.

Skipping Chapters or Tracks

During play, press the ⏮ or ⏭ button on the remote control.

• **If you press the ⏮ button**
If you press the ⏮ button, it moves to the beginning of the chapter or track. Pressing the button once again within 3 seconds returns to the beginning of the previous chapter or track.

• **If you press the ⏭ button**
If you press the ⏭ button, it moves to the next chapter or track.

Skipping ahead 30 seconds

In play mode, press F.ADV/SKIP button to cue ahead exactly 30 seconds.

Slow Motion Play/ Step Motion Play

Slow Motion Play (DVD-VIDEO/DVD-RAM/DVD RW/ DVD-R)

During pause mode, press the SEARCH ◀◀ or ▶▶ button on the remote for more than 1 second.

• Each time you press the ▶▶ button :
▶▶ Slow X 1/8 → ▶▶ Slow X 1/4 → ▶▶ Slow X 1/2

• Each time you press the ◀◀ button :
◀◀ Slow X 1/8 → ◀◀ Slow X 1/4 → ◀◀ Slow X 1/2

To return to normal speed playback, press the ▶II button.

Step Motion Play (DVD-VIDEO/DVD-RAM/ DVD-RW/ DVD-R)

During pause mode, press the F.ADV button on the remote.

• Each time the button is pressed, a new frame will appear.

To return to normal speed playback, press the ▶II button.

Note

■ No sound is heard during STEP or SLOW mode.

About QUICK

The QUICK functions allows you to easily search for a desired scene by accessing title, chapter, track and time. You can also change the subtitle and audio settings and set some features including Repeat, Angle and Zoom.

Press the QUICK button on the remote control during playback.

DVD-VIDEO

Title/Chapter/Time/Subtitle/Audio/Repeat/Angle/Zoom

DVD-RAM/DVD-RW

Title/Time/Subtitle/Audio/Repeat/Zoom

DVD-R

Title/Chapter/Time/Audio/Repeat/Zoom

Note

■ **What's a track?**
A track is usually a song on a Audio CD (CDDA) or MP3 disc.

■ **What's a chapter?**
A title on a DVD disc is usually divided into chapters.

■ **What's a title?**
A title means usually a film contained on a DVD disc.

■ This may not work for some discs. When an audio CD(CD-DA) or a MP3 disc is inserted, depending on the type, the information display may not be appear.

■ Regarding the DVD-Video mode, the Time Search function does not operate in some discs.

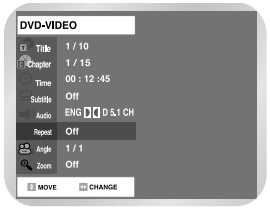
■ To make the screen disappear, press the QUICK again.

Repeat Play

Using Repeat Play (For DVD-VIDEO/DVD-RAM/DVD-RW/DVD-R)

(DVD-VIDEO only supports chapter repeat.)

1 Press the QUICK button.



2 Use ▲▼ buttons to select Repeat and use ► button to select the Title, Chapter or A-B you want to play repeatedly.

3 Press ENTER button.
Repeat play allows you to repeat title, chapter or A-B.

- To make the screen disappear, press the QUICK or RETURN button.

Using Repeat Play (For Audio CD/MP3)

1 Press the QUICK button during playback.
Repeat is highlighted.

2 Press ENTER button.

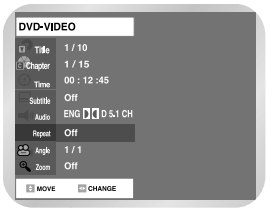
3 Press the ▲▼ button to select the Track or Disc you want to playback repeatedly. For MP3 discs, you can select Track, Folder or Disc.

4 Press ENTER button.
Repeat play allows you to repeat a track, folder or the entire disc.

Using the A-B Repeat Function

For DVD-VIDEO/DVD-RAM/ DVD-RW/DVD-R

1 Press the QUICK button during playback.



2 Use ▲▼ to select Repeat and use ► button to select A-B.

3 Press ENTER button.

4 Press the ENTER button at the point where you want the repeat play to start (A) and then press the ENTER button at the point where you want the repeat play to Stop (B).

- Your DVD Recorder-VCR will playback the selected section repeatedly.

To return to normal playback

Select Off on the Repeat item or press the CLEAR button on the remote control.

Moving to a Scene Directly

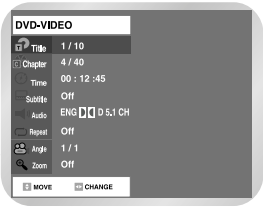
You can find the desired scene easily using the QUICK function.

1 Press the QUICK button during playback.

2 Use ▲▼ to select the Title, Chapter or time you want to find the desired scene.

3 If you want to select a title or chapter, select it using the ◄► buttons. Then, press the ENTER button.

- You can enter the desired item directly using the number buttons.



4 If you want to move to a desired time, enter the time in the sequence of hour, minute, and second using the number buttons and then press the ENTER button.

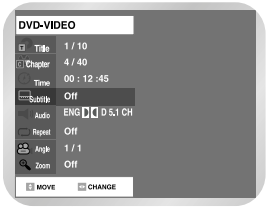
Selecting the Subtitle & Audio Language

Audio languages and subtitle languages may not work depending on disc type.

It is available during playback only.

Selecting the subtitle language

1 Press the QUICK button during playback.



2 Use ▲▼ to select Subtitle and use ◄► button to select the desired subtitle language.

- If a disc contains subtitles, you can select a desired subtitle language by pressing the ◄► buttons.
- Subtitle display may be different depending on disc type.
- DVD subtitles may overlap with your TVs subtitles. If this occurs, disable the caption function on your TV.
- Some discs allow you to select languages from the disc menu only.

Selecting the Audio language

1 Press the QUICK button during playback.

2 Use ▲▼ to select Audio and use ◄► button to select the desired audio language.

- Audio languages may be different because they are disc-specific.
- Some discs allow you to select languages from the disc menu only.

Changing the Camera Angle

When a DVD contains multiple angles of a particular scene, you can select the Angle function.

1 Press the QUICK button when the "Angle" is shown on the screen during playback.

2 Use ▲▼ to select Angle and use ◄► button to select the desired angle.

Note

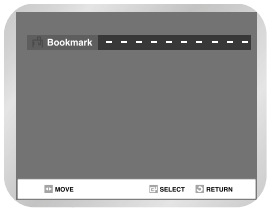
■ This function is disc-dependent, and may not work with all DVDs. This function does not work when a DVD has not been recorded with a multi-camera angle system.

Using Bookmarks

Set marks at scenes you want to see again so that you can start playback from the marked position.

Setting a book mark

1 Press the MARKER button during playback.



2 Press the ENTER button when the desired scene appears.
- The number 1 is displayed and the scene is memorized.

3 Press ► button to move to the next position.

4 Press the ENTER button again when the desired scene appears.
- The number 2 is displayed and the scene is memorized. Repeat above to bookmark other positions. You can bookmark up to 10 scenes.

Bookmarking with DVD-RAM/ DVD-RW(VR) disc

- The screen will display "Marker" in place of "Bookmark" if you are playing a DVD-RAM/DVD-RW(VR).
- Up to 99 scenes can be marked.
- If you press the ENTER button during playback, bookmarks are saved in the order of title.

Playing Back a Bookmark

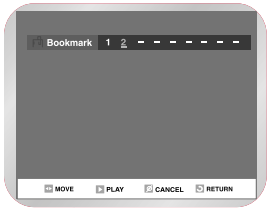
1 Press the MARKER button.

2 Press the ◄► buttons to select a bookmarked scene.

3 Press the ENTER button to start playing from the selected scene.

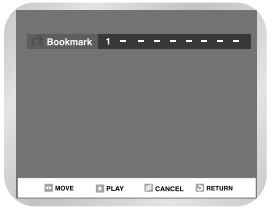
Clearing a Bookmark

1 Press the MARKER button.



2 Press ◄► buttons to select a marked scene you want to delete.

3 Press Clear button to delete the selected bookmark.

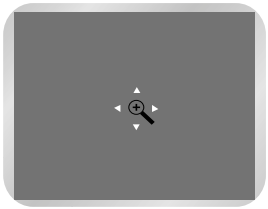


Note
■ When using a DVD-RAM/DVD-RW(VR) the last Marker number added will be deleted.

Zooming-In

1 Press the QUICK button during playback.

2 Use ▲▼ buttons to select Zoom, and then press the ENTER button.
- 🔍 will be displayed.



3 Press ▲▼◄► buttons to move to the area you want to enlarge.

4 Press the ENTER button.
- The screen will be enlarged to twice the normal size.
- If you press the ENTER button again after the screen was enlarged to twice the normal size, the screen size will be enlarged to four times the normal size.

DVD-VIDEO/ DVD-RAM/DVD-RW/ DVD-R	normal size →2X →4X →2X →normal size

5 To return to the normal size, press the ENTER button repeatedly until the screen becomes of normal size.

Check Remaining Time

1 Press Info button on the remote control. Following information will be displayed. (Current deck status, recording speed, remaining time, input channel, current time.)

Using the Disc and Top Menu

Some type of discs contains a dedicated menu system that allows you to select special functions for title, chapter, audio track, subtitle, film preview, information on characters, etc.

For DVD-VIDEO disc

1 Press the DISC MENU button to enter the disc menu of the disc.

- Move to the setup menu related to playback operation.
- You can select audio language and subtitle etc. provided by the disc.

2 Press the TOP MENU button to move to the title menu of the disc.

- Use this button if the disc contains more than one title. Some discs may not support the title menu functionality.

For DVD-RAM/DVD-RW/ DVD-R disc

1 Press the TITLE LIST button to display title list.

Note

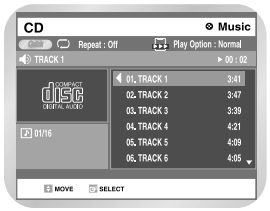
- Title List : Title refers to a recorded video stream. Title List shows list to help you select a title. Since the title list consists of the information on stream that is actually recorded, if one title is deleted, that title cannot be played again.
- Play List : This refers to a unit of playback, which is made by selecting a desired scene in the entire Title List. When one playlist is played, only the scene selected by the user will play and then stop. Since only the information necessary for playing a desired scene is included in a playlist, even if that playlist is deleted, the original data will not be deleted.

Playing Back an Audio CD (CDDA)

Each disc has a variety of menu functions available.

1 Insert an audio CD (CDDA) into the disc tray.

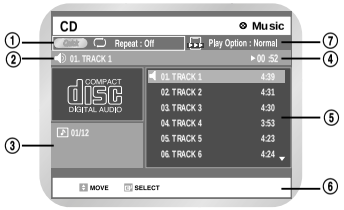
- The audio CD menu appears and the tracks (songs) are played back.



2 Press ▲▼ buttons to select the track (song) to start playback from, and then press the ENTER button.

- You can also select the track (song) by pressing the number buttons on the remote.

Audio CD(CD-DA) Screen Elements



1. **Repeat mode**: Repeat off/Repeat Track/Repeat Disc.
2. **Current track (song)**: Displays the number of the track currently being played.
3. Displays the current play index and total track num-ber.
4. This shows the operating state of a disc and a playback time corresponding to a portion that is currently played.
5. Displays the track list (song list) and the playing time of each track.
6. Button display.
7. **Play Option**: Normal, Random, Intro or Playlist

Audio CD (CDDA) Screen Elements

1 ▲▼ : Select a track (song).

2 ► : Playback the selected track (song).

3 ENTER ( ) button: Playback the selected track (song).

4 (⏭) button: Playback the next track.

5 (⏮) button: Returns to the beginning of the current track when pressed during playback.
If you press this button within three seconds after playback starts, the previous track will be played. If you press this button after three seconds,the current track will be replayed from the beginning.

6 Press and hold the (◀◀ / ▶▶) button: Fast Play (FF1/FR1, FF2/FR2, FF3/FR3)

Play Option Mode

1 Press the QUICK button during playback.
Repeat mode will be highlighted.

- During Playback, repeat mode will be highlighted.
- During Stop, Play option will be highlighted.

2 Select Play Option Mode using the ◄► buttons and press the ENTER button.

- The play option screen will appear.

3 Select a desired play option using the ▲▼ buttons and press the ENTER button.

- **Normal** : Tracks on a disc are played in the order in which they were recorded on the disc.
- **Random** : The Random option plays a disc's tracks in random order. After a random list is generated and played completely, another random list is generated and played.
  Ramdom Play continues until the play option is changed.
- **Intro** : The first 10 seconds of each track is played. If you press the ►|| button during Intro play, Normal Play will be performed from the track currently playing. When Intro Play is completed, Normal Play is performed.
- **Playlist** : The Playlist playback option allows you to select the order in which you want tracks to play.

Note

■ The same can be used with a Mp3 disc.

To change repeat mode

1 Press QUICK during Play to highlight Repeat Mode.
Press ENTER when Repeat Mode is highlighted.

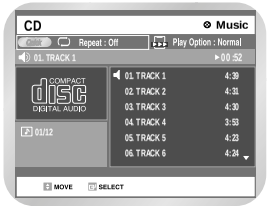
- A screen allowing you to change the repeat mode (Off, Disc, Track) will appear.

Playback

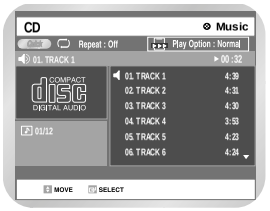
To Program Tracks

You can register a maximum 30 tracks in the playlist.

1 **Press the QUICK button.**
Repeat Mode will be highlighted.

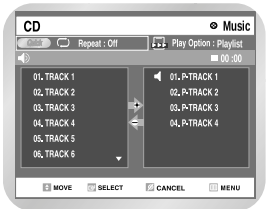


2 Select Play Option using the ◄►buttons.



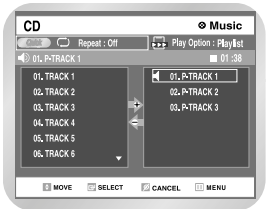
3 Press the ENTER button.
The play option screen will appear.
Select Playlist using the ▲▼buttons.

4 Press the ENTER button.
The Playlist screen will appear.
Select tracks in the order in which you want them to play using the ▲▼buttons. Press the ENTER button.



Press the PLAY button to playback playlist.

5 If you playlisted a wrong track, select the wrong track using the ▲▼ buttons and press the CLEAR button.
The wrong track will be removed.

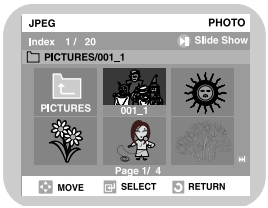


Playback

Photo CD Playback

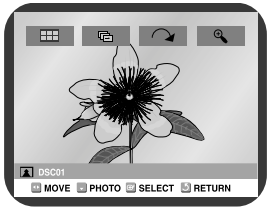
1 Insert a photo CD (JPEG) into the disc tray.

2 The screen shown below will appear automatically. (Press ▶II button to switch to slide show mode.)



To see the next 6 pictures, press the ⏭ button.
To see the previous 6 pictures, press the ⏮ button.

3 Select Photo using ▲▼ buttons, then press the ENTER button.



4 Use the ◄► buttons to select clips menu and then press the ENTER button.

- : Returns to the Album screen.
- : The unit enters slide show mode. Before the slide show can begin, the photo interval (slide show speed) must be set
- : Each title the ENTER button is speed, the picture rotates 90 degree clockwise.
- : Each time ENTER button is pressed, the photo is enlarged up to 4X. (Normal →2X →4X →2X →Normal)

When using a combination MP3/JPEG disc

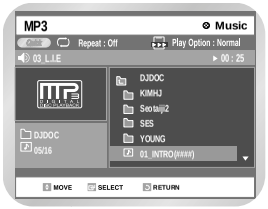
1 If you want to listen to MP3 files, but you're currently in Photo mode, press STOP button twice and then press MENU button to bring up the Menu screen.

2 Select Music using the ▲▼ buttons then press the ► or ENTER button. MP3 screen will be shown.

Playing back an MP3 CD

1 Insert an MP3 CD into the disc tray.

- The MP3 menu is displayed and the tracks (songs) are played back.



2 Press the ▲▼ buttons to select the folder you want to hear, and then press the ENTER button.

- Press the ▲▼ buttons to select the track (song) you want to hear, and then press the ENTER button.
- You can also select the desired track (song) by pressing the number buttons on the remote.

Buttons on the Remote

1 ▲▼ : Selects a track (song).

2 ► : Playback the selected track (song).

3 ENTER (↵) button:
Playbacks the selected track (song) or displays the files in the selected folder.

4 RETURN (↺) button:
Moves to the parent of the folder to which the current song belongs.

5 (⏭) button: Playbacks the next track.

6 (⏮) button: Returns to the beginning of the current track when it is pressed during playback. If it is pressed again, your DVD Recorder-VCR plays back the previous track.

When using a combination MP3/JPEG disc

1 If you want to watch Photo files, but you're currently in MP3 mode, press STOP button twice and then press MENU button to bring up the Menu screen.

2 Select Photo using the ▲▼ buttons then press the ► or ENTER button. Photo screen will be shown.

Using PIP

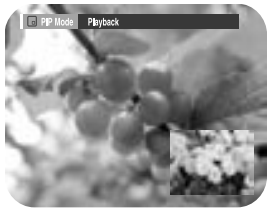
The PIP function allows you to view a sub screen together with the main screen in DVD mode.
You can watch both DVD and TV together.

Note

■ PIP does not work in VCR mode.

1 Press the PIP button.

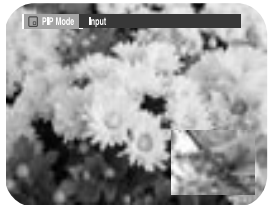
• The current disc is played back on the PIP screen located at the bottom of the screen.



Switching between the PIP and main screens

1 Press the PIP button again.

• The main and PIP screen will be switched.



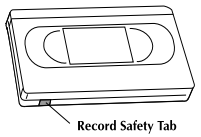
Deactivating PIP

1 Press the PIP button again.

• PIP will be deactivated.

Playing the VCR

To play a standard VHS videotape, just insert it into the VCR deck and press the PLAY button. You can turn on the Auto Play to enable the VCR deck to play automatically when you insert a videotape that is missing the Record Safety Tab. See pages 36~37.



1 Insert VHS Tape

Insert a standard VHS videotape into the VCR deck.

• When a videotape is inserted, power will turn on automatically.

2 Play Tape

Press the ▶II(PLAY/PAUSE) button on the remote control or on the front panel of the unit. The videotape will begin to play automatically if it is missing the Record Safety Tab and Auto Play is turned on. See pages 36~37.

3 Stop Playback

Press the ■(STOP) button on the remote control or on the front panel of the unit.

Tracking

The Tracking adjustment removes almost the white lines that sometimes appear during playback because of slight differences in recording decks. The TRK button will automatically align the recorded tracks with the playback heads to solve this problem. You may also set tracking manually.

1 Adjust Tracking Manually

During playback, press the CH/TRK ∧/∨ buttons to remove white lines from the picture.

Special VCR Playback Features

While a videotape is playing, you can enjoy a variety of special playback features, including Still, Frame Advance, Skip, Slow motion, and more. Press the Play button again to resume normal playback.

1 Pause

In Play mode, press ►II(PLAY/PAUSE) to still a single frame.

2 Frame Advance

In the pause mode, press F.ADV/SKIP to advance to the next frame.

3 Fps/Review

In Play mode, press Forward (▶▶) or Rewind (◀◀) to Cue/review at two speeds:

- Picture Search — Press and release to advance the tape forward or backward at 5 times normal speed.
- Jet Search — Press and hold to advance the tape forward or backward at 7 times normal speed.

4 Skip

In Play mode, press F.ADV/SKIP to cue ahead exactly 30 seconds. Press F.ADV/SKIP repeatedly up to 4 times to cue ahead 2 minutes.

5 Slow motion

In pause mode, press ▶▶ button for slow motion. Press the press ▶▶ button repeatedly to vary slow motion speed from 1/5 to 1/30 of normal playback. Press the PLAY button twice to resume normal viewing.

S-VHS Playback

The DVD Recorder-VCR allows you to playback high quality S-VHS tapes.

1 Insert a S-VHS Tape

Insert an S-VHS tape into the VCR deck.

2 Start Playback

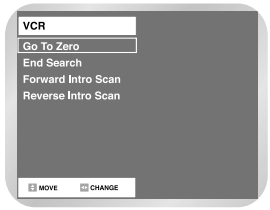
Press ►II(PLAY/PAUSE) on the remote control to begin playback of the S-VHS tape.

Variable Search System

Press the QUICK button to display the search screen in the stop mode. When a program is recorded, the starting point is given an Index mark for easy location. However, the VHS Index Search System (VISS) cannot recognize index marks made by old VCRs. If the VCR has trouble finding a mark, it is probably because the cassette was recorded on a VCR without VISS. If you want to index two programs in a row, set your VCR to stop, then start recording each program.

1 Go to [0:00:00] stop

Use this feature when you want to search for the [0:00:00] counter position on a cassette. Press the CLEAR button at the point on the tape where you want to set the counter to [0:00:00].
While a cassette is stopped, press the QUICK button. The VCR will rewind or fast forward, searching for the [0:00:00] counter position, and then automatically stop at that position.



2 End search

Use this feature when you want to search for a blank position to record a program on a cassette. While a cassette is stopped, press the QUICK button. The VCR will fast forward, searching for a blank position, and then automatically stop at that position. If the VCR reaches the end of the tape during end search, the tape will be ejected.

3 Scan and play

Use scan and play when you don't know exactly where a program is located on a cassette tape.

- **Forward Intro Scan**
  Highlight "Forward Intro Scan", then press the ENTER button.
- **Reverse Intro Scan**
  Highlight "Reverse Intro Scan", then press the ENTER button.

Recording

This section shows various DVD recording methods.

Before Recording

Preliminary

This unit can record on various types of discs. Before recording, read the following instructions and select the disc type according to your preference.

Recordable discs

This recorder can record on the following discs.

DVD-RAM	DVD-RW	DVD-R
DVD RAM	DVD RW	DVD R

• DVD-RWs and DVD-RAMs are rewritable.
• DVD-Rs are non-rewritable.

This can be due, among other reasons, to problems and errors that can occur during the creation or recording of DVD and other software and the manufacture of software discs (including blank discs).
Moreover, because of variations in the quality of discs, this recorder may not be able to record on all discs that bear a DVD-RAM, DVD-R or DVD-RW logo, but you should not encounter difficulty if you use only high quality recordable DVD discs.
If you happen to encounter difficulties playing or recording a DVD disc of playing a CD disc, please feel free to call our Customer Service Hotline at 1-800-319-6684.

Compatibility between the DVD Recorder-VCR and Other Company's Recorder.

Disc Types	Recording format	Recording Device	Finalizing	Additional Recording in the DVD Recorder-VCR
DVD-RAM	VR Mode	Toshiba	X	Recordable
		Other Company	X	Recordable
DVD-RW	VR Mode	Toshiba	finalized	Not recordable
			not finalized	Recordable
		Other Company	finalized	Not recordable
			not finalized	Recordable
	V Mode	Toshiba	finalized	Not recordable
			not finalized	Recordable
		Other Company	finalized	Not recordable
			not finalized	Not recordable
DVD-R	V Mode	Toshiba	finalized	Not recordable
			not finalized	Recordable
		Other Company	finalized	Not recordable
			not finalized	Not recordable

Note

■ Finalize
- This closes the DVD-R/RW so no additional recording can be done.

■ Unfinalize
- This allows additional recording on a finalized DVD-RW disc.
- A DVD-RW disc that has been recorded by DAO in a PC cannot be unfinalized.
- A DVD-RW disc that has been recorded in Video Mode of a different maker's recorder cannot be unfinalized.
- A DVD-R disc cannot be unfinalized.

Recording Formats

When you insert an unused disc, the following message appears. Since available functions differ depending on the disc type, select a disc that best fits your preferences.
DVD-RAM: Use after formatting the disc.

DVD-RW: When unused DVD-RW disc is first inserted, the message "Do you want to intialize this disc" will be displayed. If you select Yes, the disc will be formatted in VR mode. If you want to change the mode, refer to Formatting a Disc on page 91.

DVD-R: Formatting DVD is unnecessary and only Video Mode Recording is supported.

DVD-RW(Video mode)/-R

- This mode automatically creates chapters at specified intervals during finalization.
- Simple editing (erasing titles/changing title name).

DVD-RW(VR mode)/-RAM

- This mode involves multiple editing functions (such as deletion of a whole title, partial deletion of a title, etc.).
- Various editing options using a created Playlist.

Unrecordable pictures

Pictures with copy protection cannot be recorded on this DVD Recorder-VCR.
When the DVD Recorder-VCR receives a copy guard signal while recording, recording stops and the following message appears on the screen.

Concerning copy control signals.

Broadcasts that contain copy control signals may have one of the following three signal types, Copy-Free, Copy-Once and Copy-Never. If you want to record a copy-once type program, use DVD-RW with CPRM in VR Mode and DVD-RAM.

	Copy-Free	Copy-Once	Copy-Never
DVD-RW(Ver.1.1)	Yes	No	
DVD-RW(Ver.1.1) with CPRM			
VR mode	Yes	Yes*	
Video mode	Yes	No	
DVD-R(Ver.2.0)	Yes	No	
DVD-RAM	Yes	Yes	

Once "Copy Once" has been recorded, additional recording cannot be performed.

Recording the current channel you are watching

DVD-RAM DVD-RW DVD-R

Preliminary

1. Check the antenna cable is connected.
2. Check the remaining time of disc.

DVD-RAM/DVD-RW/DVD-R discs should be formatted in advance before beginning recording. Most new discs are sold unformatted. Make sure to format your unformatted discs before recording.

1 Press the OPEN/CLOSE button and place a recordable disc on the disc tray.

2 Press the CHANNEL ▲▼ button to select the channel you want to record.

3 Press the REC Speed button on remote control, to select the recording speed (quality).

- XP(High, approx. 1 hour) →SP(Standard, approx. 2 hours) →LP(Low, approx. 4 hours) EP(Extended Play, approx 6 hours)

4 Press the REC button.

- ●/■ is displayed on the screen and recording begins.

5 Press the STOP button to stop or finish a recording in progress.

- The message "Updating the information of disc. Please wait for a moment".

Pausing / Resuming

- Press the REC PAUSE button to pause a recording in progress.
- Press the REC PAUSE button again during pause to resume recording.
- You can switch channels by pressing the CH ∨/∧ buttons while recording pauses.

Note

- You can't change the recording mode and channel during recording.
- Recording will stop automatically if there is not enough space for recording.
- Up to 99 titles can be recorded onto a disc.
- If the power interrupted due to power failure or other reasons, the title being recorded will not be saved onto the disc.
- Recording will stop automatically if a copy protected image is input.
- Do not use DVD-R authoring discs with this unit.

Making One Touch Recording (OTR)

DVD-R(VR) DVD-RW DVD-R

One-Touch Recording (OTR) allows you to add recording time in 30-minute increments up to 4 hours at the touch of a button.

1 Insert the disc.

Use the channel ▲▼ button or number buttons to select the channel to record.

- CATV channel: 1 to 125
- TV channel: 2 to 69

2 Start Recording.

Follow the instructions on page 62 to begin recording.

3 Activate OTR.

While in Record mode, press the REC button again to activate One-Touch Recording (OTR).

- Record length 0:30 appears on the On-Screen Display and the DVD Recorder-VCR will record for exactly 30 minutes.

4 Add Recording Time.

Continue pressing REC to add recording time in 30 minute increments up to 4 hours.

- The DVD Recorder-VCR stops recording automatically when the time has elapsed.

VCR Plus+ Record

DVD-RAM DVD-RW DVD-R

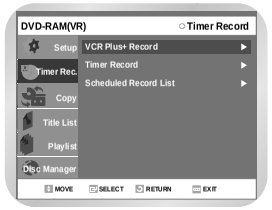
Preliminary

1. Check the antenna cable is connected.
2. Check the remaining time of the disc.
3. Check the date and time are correct.

Make sure the Clock has been set (Setup - System Setting) before you proceed with a timer recording.

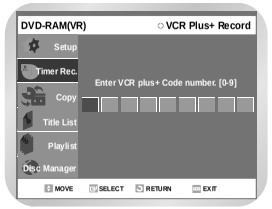
1 Press the MENU button.

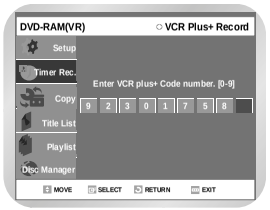
- Press the ▲▼ buttons to select Timer Rec and then press the ENTER or ▶ button.
- Select VCR Plus+ Record



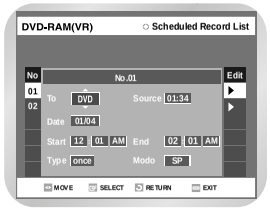
- If the current time is not set. Set the current time first.

2 Enter VCR Plus+ Code number.

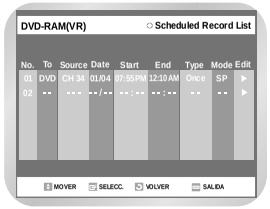




3 • The Timer Recording screen is displayed.
If you enter VCR Plus+ Code number correctly., all recording informations will be set automatically.



4 After check if all record information is right, press ENTER button.



Making a Timer Recording

Preliminary

1. Check the antenna cable is connected.
2. Check the remaining time of the disc.
3. Check the date and time are correct.

Make sure the Clock has been set (Setup - System Setting) before you proceed with a timer recording.

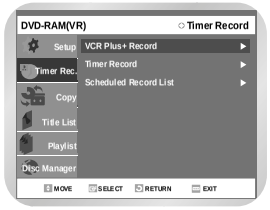
1 Press the TIMER REC button.

• Scheduled Record List screen is displayed.

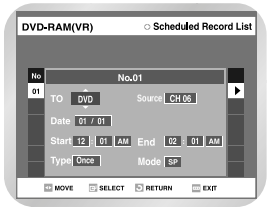
Using the MENU button:

① Press the MENU button.
② Press the ▲▼ buttons to select Timer Rec., and then press the ENTER or ▶ button.
③ Select Timer record.

• If the current time is not set. Set the current time first.



Using the TIMER REC button



2 Set timer recording option.

• The Timer Recording screen is displayed. Fill the input items using the arrow buttons.

◀▶: Moves to the previous/next item,
▲▼: Sets a value.

• **TO** : Select the media to record DVD or VCR.
• **SOURCE** : The video input source (L1 or L2), or the broadcasting channel you want to make a timer recording from.
• **Date** : Set the recording day.
• **Start/End Time** : Start and end time of the timer recording.
• **Type** (Recording cycle).
Once : Records once.
Weekly : Records at a set time every week.
Daily : Records at a set time every day.
• **Mode** (Recording mode).

DVD

AUTO : Select when you want to set video quality automatically. It depends on the remaining time on the DVD.

XP (high quality) : Select when audio and video qualities are important. (Approx. 1 hour)

SP (standard quality) : Select to record in standard quality. (Approx. 2 hours)

LP (low quality) : Select when a long recording time is required.(Approx. 4 hours)

EP (extended mode) : Select when a longer recording time is required. (Approx.6 hours about 1.2 Mbps)

VCR

AUTO : Select when you want to set video quality automatically. It depends on remaining time of VCR tape.

SP : Standard Play, for best picture quality and for long preservation.

SLP : Super Long Play, for maximum recording time (3 times SP).

3 Press the ENTER button.

• ◷ will appear on the front panel. It means that a timer recording is registered.

If you make a mistake
Press the ◀▶ button to select the item you want to change.

If the timer settings overlap
The programs are recorded in order of priority. If timer recording is set for the first program and then again for the second program and both programs overlap, the following message will appear on the screen: "This setting is identical with 1"
The message shows that the first program has priority. After recording of the first program is complete, the second program starts being recorded.

To exit without saving the current setting
Press the MENU or TIMER REC button.

To return to the previous menu
Press the RETURN button if you don't want to set a timer recording.

4 Turn the power off to finish the timer recording.

• ◷ will blink if disc or tape is not inserted.

Note

■ The timer recording time may differ from the set time depending on disc status and overall timer recording status (for example, recording times overlapping, or when the previous recording ends within 2 minutes before the start time of the next recording.)

Editing Timer Record List

DVD-RAM DVD-RW DVD-R

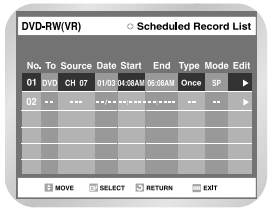
Follow these directions to edit the timer record list.

Editing the settings for a timer recording

1 Press the MENU button.

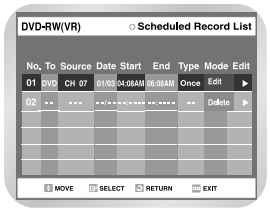
2 Press the ▲▼ button to select Timer Rec., and then press the ENTER or ► button.

3 Press the ▲▼ button to select scheduled Record List, and then press the ENTER or ► button.



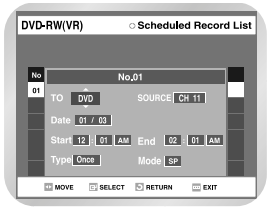
4 Press the ▲▼ button to select the number of the timer recording you want to edit, and then press the ENTER or ► button.

• The Edit and Delete items are displayed.



5 Press the ▲▼ button to select Edit, and then press the ENTER button.

• The Timer Recording screen is displayed. Edit the items you want to modify. See the Timer Recording section for more information on Timer Recording Input items.



6 Press the ENTER button to confirm the edited setting.

Deleting a Timer Recording Entry

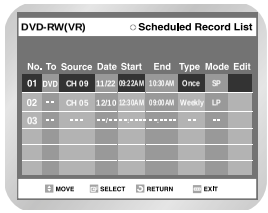
DVD-RAM DVD-RW DVD-R

Follow these directions to delete an entry from the timer record list.

1 Press the MENU button.

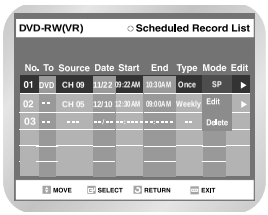
2 Press the ▲▼ button to select Timer Rec., and then press the ENTER or ► button.

3 Press the ▲▼ button to select scheduled Record List, and then press the ENTER or ► button.



4 Press the ▲▼ button to select the number of the timer recording you want to delete, and then press the ENTER button.

• The Edit and Delete items are displayed.



5 Press the ▲▼ button to select Delete, and then press the ENTER button.

• You will be prompted with the delete confirm message such as 'Do you want to delete No.02?'.

6 Press the ◄► buttons to select Yes, and then press the ENTER button.

• The selected entry will be deleted from the list.

7 Press the MENU button after finishing the operation. The menu screen will disappear.

Watching the Images Being Recorded (Time Slip)

DVD-RAM

This function allows you to watch the recently recorded 10-second images on the PIP screen while a recording is in progress.

1 Press the TIME SLIP button on the remote control.
- The recently recorded 10-second images are played back on the PIP screen.
- This function starts to operate 10 seconds from the time you press the REC button.
- On the TIME SLIP screen, you can playback, scan, or perform other operations for the recorded program using the playback related buttons.
  Press the ◀◀ button to scan the recording in the reverse order, from the end to the start.
  Press the ▶▶ button to scan to the recently recorded 10- second images.

2 Press the STOP button once to clear the TIME SLIP function.
- To stop a recording while a TIME SLIP function is in progress, press the STOP button twice.

Note
■ The Time Slip feature only works with DVD-RAM discs.

Recording From External Devices

Follow these directions to record onto a disc or a tape from External Devices.

1 Connect the Line out jack of your External Devices to the Line IN jack on the front or rear of your DVD Recorder-VCR using Audio/Video Cable.

2 Power on your DVD Recorder-VCR and switch to Line In mode by pressing the INPUT SEL on the remote .
The front panel display changes on the following sequence
↱ Channel Number → L1 → L2→ DV↰

3 When your DVD Recorder-VCR is in the stop state, set the operation mode of your External Devices to play mode.

4 Press the REC button on your DVD Recorder-VCR when the image from which you want to start recording is displayed.

5 Press the STOP button on your DVD Recorder-VCR when the recording is finished.

Note
■ Also refer to the user manual for your External Devices when recording through Line In mode using Audio/Video cable.

Recording through a DV jack

Follow these directions to record onto a disc or tape the outputs of a camcorder that has a DV output jack.

1 Connect the DV output jack of your camcorder to the DV input jack on the front of your DVD Recorder-VCR using a DV cable.

2 Power on your DVD Recorder-VCR and switch to DV mode by pressing the INPUT SEL. on the remote. Insert the disc.

3 With your DVD Recorder-VCR stopped, set the operation mode of your camcorder to play mode.

4 Press the REC button on your DVD Recorder-VCR when the image from which you want to start recording is displayed.

5 Press the STOP button on your DVD Recorder-VCR when the recording is finished.

Note
■ Some camcorders may not work with your DVD Recorder-VCR even if they have a DV output jack.
■ Also refer to the user manual for your camcorder when recording through a DV jack.

Basic VCR Recording

Preliminary

Before starting
1. Check TV channel and Antenna connections.
2. Check the remaining time on the tape.

You can record a TV show in progress by inserting a blank tape and pressing the ●(REC) button. You can even add time in 30-minute increments up to 4 hours by pressing the ●(REC)button repeatedly; see page 63.

Note
■ Be sure your videotape has a Record Safety Tab. If the tab is missing, you can cover the opening with a small piece of tape. Do not cover this opening unless you are sure you want to record over the tape.

1 Insert Tape
Insert a blank VHS tape into the VCR deck.
- Make sure the tape is long enough to record the entire program.
  To change the Recording Speed, see page 70.

2 Select a Channel to Record
Use the 0–9 buttons or the Channel UP/DOWN arrow buttons to select the desired channel, or press the INPUT SEL. button to select Line 1, Line 2 or DV if recording from an external device connected to the front or rear Line inputs, respectively.

3 Start Recording
Press the REC button on the remote control or front panel.
For options while recording is in progress, see “Special Recording Features”.

4 Pause/Resume Recording
Press the ⏸(REC/PAUSE) button.
Press ●(REC) again to resume.

5 Stop Recording
Press the ■(STOP) button.

Special Recording Features

While a recording is in progress, you can watch a different channel, watch a different media, or add recording time in 30-minute increments.

1 Watch a Different Channel

Press the TV/VCR button on the remote to switch to your TV tuner, then select a different channel on your television.

2 Watch a different media during recording

You can watch DVD during VCR recording or watch Video tape during DVD recording.

- During VCR recording, insert a DVD in the DVD deck. The output will automatically change to the DVD and start playback.
- During DVD recording, insert a Video tape in the VCR deck. The output will automatically change to the VCR and start playback. (Only if tape is missing the safety tab)

3 Add Recording Time

Refer to the One-Touch Recording (OTR).

4 Recording DVD and VCR at the same time

You can record DVD and VCR at the same time, but both modes must be set up to record separately.

- Press the DVD/VCR button to set the unit to DVD or VCR mode.
- Choose Line input mode (Ch, Line1, Line2 or DV). for DVD or VCR.
- Choose REC mode for DVD or VCR.
- Press REC button for DVD or VCR.

Note

- When DVD Recorder-VCR is connected to TV using S-Video or component video cable, the playback screen on the video tape will not display during DVD recording.
- You cannot record different channel at the same time.
- The DVD and VCR cannot start recording at the exact same time. You must set one mode to start recording, then the other.

Record Speed

You can slow down the recording speed from SP to SLP in order to fit six hours of programming on a T-120 tape.

1 Start Recording

Follow the Basic Recording instructions on page 69.

2 Set Record Speed

Press the REC SPEED button on the remote control to set the Record Speed to one of the following options:

- SP – Standard Play, for best picture quality.
- SLP – Super Long Play, for maximum recording time (3 times SP).

Note

- The selected Record Speed will appear on the front panel display and on-screen display.

Maximum Recording Time - SP vs. SLP

Tape Length	SP (Standard Play)	SLP (Super Long Play)
T-120	2 hrs	6 hrs
T-160	2hrs 40 mins	8 hrs
T-180	3 hrs	9 hrs

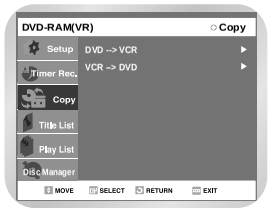
Note

- When you watch or record on the VCR during DVD Recording, some function buttons may not operate.
  The message "This function is not available." will be displayed.
- SP(Standard Play) is for best picture quality.
- SLP(Super Long Play) is for maximum recording time.

Copy to DVD or VCR

DVD-RAM DVD-RW DVD-R

You can copy DVD to VCR or VCR to DVD.
Press MENU button and select Copy.



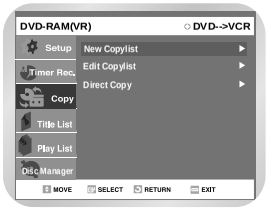
DVD to VCR

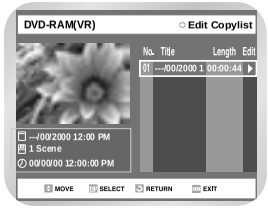
1 Select DVD –> VCR to copy DVD to VCR.

- Check the remaining time on the tape.

2 If you want to copy from the Copylist, choose "Edit Copylist".

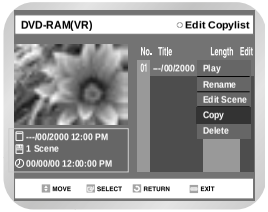
- To copy from "Edit Copylist", you need to make a Copylist. To make and select a "New Copylist" (See pages 81~82).
- If you want to copy directly, choose "Direct Copy".





3 Select the Copylist, you want to copy

using the ▲ ▼ buttons and then press ► button.
To copy play list, select "Copy".



Direct copy DVD to VCR

1 Insert DVD disc you want to copy.

2 Insert VHS tape.

3 Press VCR copy button on front panel or remote control.

4 To stop recording press the stop button.

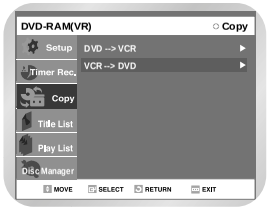
- You can only use the Direct Copy feature on DVD-R and DVD-RW(V) discs.

VCR to DVD

1 Select VCR –> DVD to copy VCR to DVD.

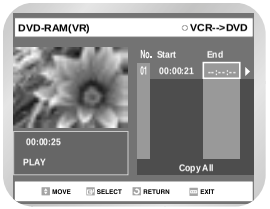
VCR --> DVD scene will be displayed.

- Check the remaining time on the disc.



2 Press ENTER button to select the start position.

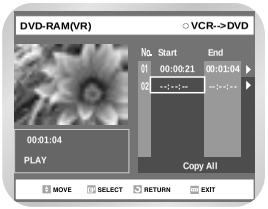
You can use ▶II, I◀◀ or ▶▶I, ◀◀ or ▶▶ buttons to search for the Start position.



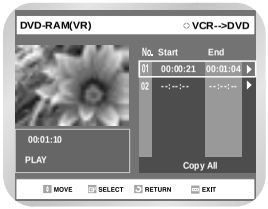
3 Select the End position in the same way.

A copylist will be generated.

- In VCR mode, the copylist cannot be saved.



4 Press Enter button to choose the list you want to copy.



5 To copy Copylist, select “Copy”.

- The VCR will fast forward, searching for a start position and then automatically start a copy.
- It may not be match up with Start and END point exactly.
- If you want to copy all content, select “Copy All”.

Direct copy VCR to DVD

1 Insert the VHS tape you want to copy.

2 Insert Recordable DVD disc.

3 Press DVD copy button on front panel or remote control.

4 To stop recording press the stop button.

Note

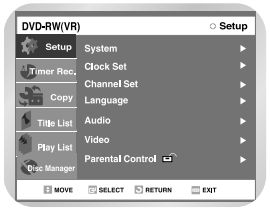
- Press the MENU button again to hide the menu screen. You can configure the settings on the Setup screen using the arrow and ENTER buttons.
- If recording or editing could have been finished properly because of any kinds of error, such as sudden power failure, The recording or editing might have not been done. Please be aware that a material that has been damaged is unable retrieved to its original content.

Viewing Title List

DVD-RAM DVD-RW DVD-R

You can playback the recorded titles, edit a title name, edit record list entries and lock or unlock the record list.

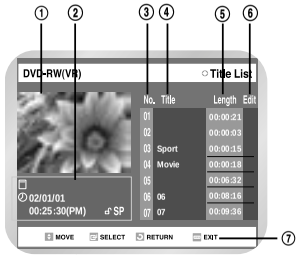
1 Insert the recorded disc.
Press the MENU button.



Note

- Title List : Title refers to a recorded video stream. Title List shows a list to help you select a title. Since the title list consists of the information on data that is actually recorded, if one title is deleted, that title cannot be played again.

2 Press the ▲▼ button to select Title List, and then press the ENTER or ► button,
or press the TITLE button on the remote control.
• The Title List screen is displayed.



① Playback screen for recorded entry.
② Information window for the selected entry: Title name, recording date, recording time, lock status, recording mode.
③ Recorded entry No.
④ Recorded entry title.
⑤ Recording duration (i.e., playtime).
⑥ Record list edit items.
⑦ Button display.

Record List edit items

1 Press the ▲▼ button to select an entry to edit, and then press the ENTER or ► button.

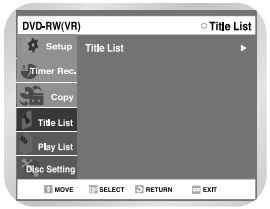
- Play : Playbacks the selected entry.
- Rename : Renames the title of the selected entry.
- Delete : Deletes the selected entry from the list.
- Edit : Deletes a desired section. (DVD-RAM/DVD-RW(VR mode)
- Protect : Locks or unlocks the selected entry.

2 Press the MENU button after the operation is finished. The menu screen will disappear.

Playing a Title List Entry

Follow these directions to playback an entry from the Title List.

1 Insert the disc.
Press the MENU button.



2 Press the ▲▼ button to select Title List, and then press the ENTER or ► button,
or press the TITLE LIST button on the remote control.

• The View Title List screen is displayed.

3 Press the ▲▼ button to select an entry you want to playback from Title List, and then press the ENTER or ► button.

• The Edit Movie List menu is displayed.

4 Press the ▲▼ button to select Play, and then press the ENTER button.

• The selected entry (title) will be played back.

Note

■ You can also playback a recorded program by pressing the QUICK button and using the title, chapter or time items.

Editing

Renaming a Title List Entry

Follow these directions to rename a title list entry, i.e., to edit the title of a recorded program.

1 Insert the recorded disc.
Press the MENU button.

2 Press the ▲▼ button to select Title List, and then press the ENTER or ► button,

or press the TITLE LIST button on the remote control.

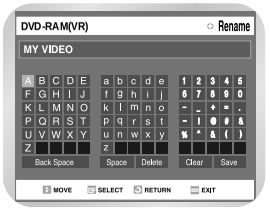
• The View Title List screen is displayed.

3 Press the ▲▼ button to select an entry you want to rename from Title List, and then press the ENTER or ► button.

• The Edit Title List menu is displayed.

4 Press the ▲▼ button to select Rename, and then press the ENTER button.

• The Rename screen is displayed.



5 Enter the desired characters using the arrow (▲▼◄►) buttons.

• Back Space: Moves the cursor to the previous character. (Functions the same as CLEAR)

• Space: Enters a blank and moves the cursor to the right.

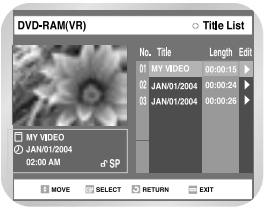
• Delete: Deletes the character at the cursor position.

• Clear: Deletes all the character inputs.

• Save: Registers the character inputs.

6 Press the arrow buttons to select Save, and then press the ENTER button.

• The changed title is displayed on the title item of the selected entry.



Editing

Deleting a Title List Entry

DVD-RAM DVD-RW DVD-R

Follow these directions to delete an entry from the Title List.

1 Insert the recorded disc.
Press the MENU button.

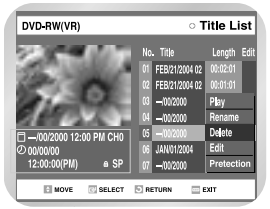
2 Press the ▲▼ button to select Title List, and then press the ENTER or ► button,

or press the TITLE LIST button on the remote control.

• The View Title List screen is displayed.

3 Press the ▲▼ button to select an entry you want to delete from Title List, and then press the ENTER or ► button.

• The Edit Title List menu is displayed.



4 Press the ▲▼ button to select Delete, and then press the ENTER button.

• DVD-RAM(VR), DVD-RW(VR mode): Since Playlist is present, the message "Do you want to delete? (Related Playlist may be deleted.)" is displayed.
DVD-RW(Video mode), DVD-R: Since Playlist is not present, the message "Do you want to delete?" is displayed.

• You cannot delete a protected entry.
If you want to delete a protected entry, select "OFF" in the protection menu.

Note

■ Be careful, since you cannot recover an entry once it is deleted from Title List.

5 Press the ◄► button to select yes and than press the ENTER button.

Locking a Title List Entry

DVD-RAM DVD-RW DVD-R

Follow these directions to lock an entry if you want to protect it from unexpected deletions.

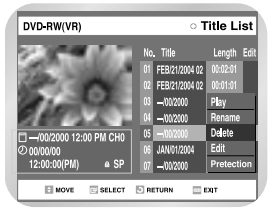
1 Insert the recorded disc.
Press the MENU button.

2 Press the ▲▼ button to select Title List, and then press the ENTER or ► button.

• The View Title List screen is displayed.

3 Press the ▲▼ button to select an entry you want to protect from Title List, and then press the ENTER or ► button.

• The Edit Title List menu is displayed.



4 Press the ▲▼ button to select Protection, and then press the ENTER button.

• You will be prompted with the confirmation message 'Title Protection:'.

5 Press the ◄► buttons to select On, and then press the ENTER button.

• The Lock icon on the information window for the selected entry changes to the locked status.

Press the ◄► buttons to select off, and then press the ENTER button to unlock Title Protection.

Deleting a Section from a Title List Entry

Follow these directions to delete a section from a Title List entry.

1 Insert the recorded disc.
Press the MENU button.

- You cannot recover a section once it is deleted from Title List.

2 Press the ▲▼ button to select Title List, and then press the ENTER or ► button,

or press the TITLE LIST button on the remote control.

- The View Title List screen is displayed.

3 Press the ▲▼ button to select an entry you want to edit from Title List, and then press the ENTER or ► button.

- The Edit Title List menu is displayed.

4 Press the ▲▼ button to select Edit, and then press the ENTER button. The Edit Program is displayed.

① Playback bar
② Playtime
③ Section deletion start point window and time
④ Section deletion end point window and time

5 Search the start points of the section you want to delete using the playback related buttons.

- Playback related buttons: ►II, ⏮, ⏭, ◄◄, ►►.

Note

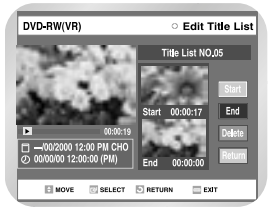
■ Be careful, since you cannot recover a section once it is deleted from Title List.

6 Press the ▲▼ button to select Start, and then press the ENTER button.

- The image and time at the start point are displayed on the start window.

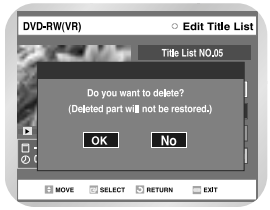
7 Press the ENTER button at the end point.

8 The image and time at the end point are displayed the end point window.



9 Press the ▲▼ buttons to select Delete, and then press the ENTER button.

- Message "Do you want to delete?" will be displayed.
- If you want to cancel, press RETURN button to return to the Title List screen.



10 Press the MENU button to exit the menu after the operation is finished.
The Title List screen will disappear.

Note

■ The length of the selection to delete should be at least 5 seconds long.
■ If the length of the section to delete is less than 5 seconds, you will be prompted with the message "The range is too short".
■ If the end time precedes the start time, you will be prompted with the message "End point cannot be marked earlier than start point".

Creating a Playlist Entry

VR mode

Follow these directions to create a new playlist entry from a recorded title.

1 Insert the recorded disc.
Press the MENU button when the disc is stopped.

2 Press the ▲▼ button to select Playlist, and then press the ENTER or ► button.

3 Press the ▲▼ button to select New Playlist, and then press the ENTER or ► button.

- The Make Scene screen is displayed.

Note

■ Play List : The Playlist is a unit of playback, that is created by selecting a desired scene in the Title List. Since only the information necessary for playing a desired scene is included in a playlist, even if that playlist is deleted, the original data will not be deleted.

4 Select the start point of the section from which you want to create a new scene using the playback related buttons, and then press the PAUSE button.

- Playback related buttons: ▶II, ⏭, ⏮, ▶▶, ◀◀

5 Press the ▲▼ button to select Start, and then press the ENTER button.

- The image and time at the start point are displayed on the Start window.
- The yellow-colored selection bar moves to the End item.

6 Search the end point of the section from which you want to create a new scene using the playback related buttons, and then press the ▶II button.

7 Press the ENTER button to select END point.

- The image and time at the end point are displayed on the End window.
- The yellow-colored selection bar moves to the Make item.

8 Press the ENTER button to confirm.

- A new make scene screen is displayed.
- Scenes to be made will be added to the current playlist.
- Repeat the above steps to make more than one scene.

9 If you want to cancel. press the ▲▼ buttons to select RETURN, and then select the ENTER button.

- The Edit Playlist screen is displayed.

10 Press the MENU or RETURN button to exit the menu.

- The Playlist screen will disappear.

Note

■ You can create up to 30 playlist entries.

Editing

Editing a Playlist Entry

VR mode

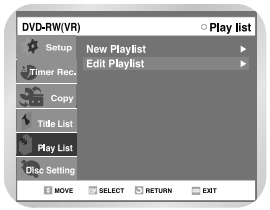
Follow these directions to playback or edit (rename, edit scene, copy and delete) the newly created playlist entries.

1 Insert the recorded disc.
Press the MENU button when the disc is stopped.

2 Press the ▲▼ button to select Playlist, and then press the ENTER or ▶ button.

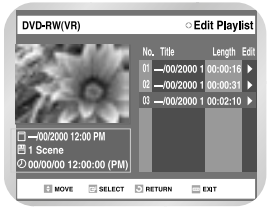
3 Press the ▲▼ button to select Edit Playlist, and then press the ENTER or ▶ button,
or press the PLAY LIST button on the remote control.

- The Edit Playlist screen is displayed.



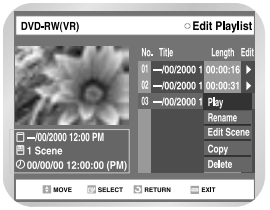
4 Press the ▲▼ button to select an entry (title) you want to edit from the Playlist,and then press the ENTER or ▶ button.

- The Edit Playlist menu is displayed.
  :Play, Rename, Edit Scene, Copy, Delete



5 Press the ▲▼ button to select a function to use, and then press the ENTER button.

- **Play**: Playbacks the selected entry.
- **Rename**: Renames the title of the selected entry. Functionality is the same as the Rename item in the Edit Record List.
- The screen returns to the Edit Playlist screen. 2
- **Edit Scene**: Edits scenes of the selected entry.
- **Copy**: Copies the selected entry.
- **Delete**: Deletes the selected entry from the list.



6 Press the MENU or PLAYLIST button after the operation is finished. The Playlist screen will disappear.

Playing Playlist Entries

Follow these directions to playback the playlist entries.

1 Press the ▲▼ button to select Play, and then select the ENTER button.

- The playlist entries will be played back.
- The screen returns to the Edit Playlist screen when the playback is finished.

2 Press the STOP button to stop the playback in progress.

- The screen returns to the Edit Playlist screen.

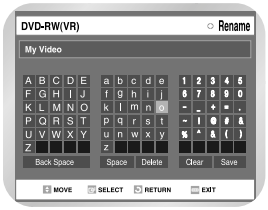
Editing

Renaming Playlist Entries

Follow these directions to rename a playlist entry, i.e., edit the title of a playlist entry.

1 Press the ▲▼ button to select Rename, and then press the ENTER button.
- The Rename screen is displayed.

2 Select the desired characters using the arrow ▲▼◄► buttons.
- Functionality is the same as the Rename item in the Edit Record List screen.



3 Press the arrow buttons to select save, and then press the ENTER button.
- The Name you changed is displayed on the title item of the selected playlist entry.

Editing Scene for a Playlist Entry

VR mode

Follow these directions to edit scenes for a playlist entry.

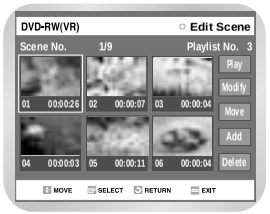
1 Insert the recorded disc.
Press the MENU button when the disc is stopped.

2 Press the ▲▼ button to select Playlist, and then press the ENTER or ► button.

3 Press the ▲▼ button to select Edit Playlist, and then press the ENTER or ► button,
or press PLAY LIST button on the remote control.
- The Edit Playlist screen is displayed.

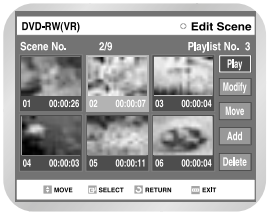
4 Press the ▲▼ button to select an entry (title) you want to edit from the Playlist,and then press the ENTER or ► button.
- The Edit Playlist menu is displayed.

5 Press the ▲▼ button to select Edit Scene, and then press the ENTER button
- The Edit Scene screen is displayed.



A. Playing a Desired Scene

1 Press the arrow buttons to select the scene you want to playback, and then press the ENTER button.
- The playlist entry to playback is selected.



2 Press the ENTER button.
- The selected scene is played back.

B. Modifying a Scene (Replacing a Scene)

1 Press the arrow buttons to select the scene you want to modify, and then press the ENTER button.

2 Press the arrow buttons to select Modify, and then press the ENTER button.
- The Modify Scene screen is displayed.

3 Select the start point of the section with which you want to modify the selected scene using the playback related buttons.
- Playback related buttons: ▶II, ▶▶I, I◀◀, ◀◀, ▶▶.

4 Press the ▲▼ button to select Start, and then press the ENTER button.
- The image and time at the start point are displayed on the Start window.

5 Press the ENTER button at the end point of the scene.

6 Press the ▲▼ buttons to select Change, and then press the ENTER button.

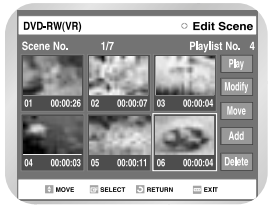
- The scene you wanted to modify is changed with the selected section.
- If you want to cancel a modification, select cancel and then press the ENTER button.

C. Moving a Scene (Changing the Position of a Scene)

1 Press the arrow buttons to select the scene you want to move (change the position), and then press the ENTER button.

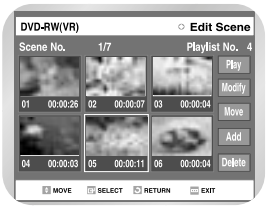
2 Press the ▲▼ buttons to select Move, and then press the ENTER button.

- A yellow selection window is displayed on the scene to move.



3 Press the arrow buttons to select the position where you want to move the selected scene, and then press the ENTER button.

- The selected scene is moved to the new position.



Note

■ You cannot move the selected scene to the position of the next scene, because the selected scene should be inserted before that position.

D. Adding a Scene

1 Press the arrow buttons to select the scene before which you want to add a new scene, and then press the ENTER button.

- A yellow selection window is displayed on the scene to add as a new scene.

2 Press the ▲▼ buttons to select Add and then press the ENTER button.

- The Add Scene screen is displayed.

3 Select the start point of the section to which you want to add the scene in step 1 using the playback related buttons.

- Playback related buttons: ▶II, ⏭, ⏮, ◀◀, ▶▶

4 Press the ▲▼ button to select Start, and then press the ENTER button.

- The image and time at the start point are displayed on the Start window.

5 Select the end point of the section you want to add as a new scene using the playback related buttons.

6 Press the ▲▼ button to select End, and then press the ENTER button.

- The image and time at the end point are displayed on the End window.

7 Press the ▲▼ buttons to select Add, and then press the ENTER button.

- The section you wanted to add is added before the scene selected in step 1.

- If you want to cancel select cancel and then press the ENTER button.

E. Deleting a Scene from the Playlist

1 Press the arrow buttons to select the scene you want to delete, and then press the ENTER button.

2 Press the ▲▼ buttons to select delete, and then press the ENTER button.

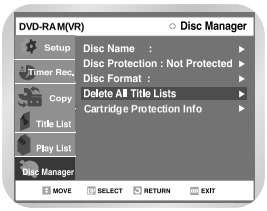
Delete All Title Lists

DVD-RAM DVD-RW DVD-R

Follow these instructions to delete all title lists.

1 Insert the recorded disc.
Press the MENU button with the disc stopped.

2 Press the ▲▼ button to select Disc Manager, and then press the ENTER or the ► button.



3 Press the ▲▼ button to select Delete All Title Lists, and then press the ENTER or the ► button.

- You will be prompted with the confirmation message 'Do you want to delete all title lists?'.

- You cannot delete a protected entry.
  If you want to delete a protected entry, disable Protection for it on the Lock item.
- Disc Protection: When Protected or Cartridge Protection has been set, or when a DVD-RAM is used, data cannot be deleted from a disc.

4 Press the ◄► buttons to select Yes, and then press the ENTER button.

- The disc is deleted.

Cartridge Protect Info (DVD-RAM)

Disc Protect allows you to protect discs from disc formatting and program deletion due to unintended operations. The cartridge write protect tab should be set to the unprotect position to be able to make a recording to a DVD-RAM disc.

1 Insert the disc.
Press the MENU button with the disc stopped.

2 Press the ▲▼ buttons to select Disc Manager, and then press the ENTER or the ► button.

3 Press the ▲▼ buttons to select Cartridge Protection Info, and then press the ENTER or the ► button.

- The cartridge protection info for the disc is displayed.

If the disc cartridge is protected, open the disc tray and check the disc.

If the disc cartridge is not protected, proceed with recording to the disc.

Note

■ Disc Protection will operate only if cartridge protect is set to Not Protected.

Finalizing a disc

DVD-RW DVD-R

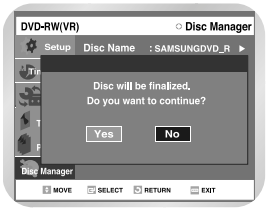
After you record titles onto a DVD-RW/DVD-R disc with your DVD Recorder-VCR, it needs to be finalized before it can be played back on compatible external devices.

1 Insert the recorded disc.
Press the MENU button with the disc stopped.

2 Press the ▲▼buttons to select Disc Manager, and then press the ENTER or the ► button.

3 Press the ▲▼ button to select Disc Finalize, and then press the ENTER or the ► button.

- You will be prompted with the message 'Do you want to finalize disc?'. If you select Yes, you will be prompted again with the message ' Disc will be finalized. Do you want to continue?'



Press the ◄► buttons to select Yes, and then press the ENTER button.

- The disc is finalized.

Note

- Once a disc is finalized, you cannot delete entries from the record list.
- After being finalized, the DVD-R operates in the same manner as a DVD-Video.
- Depending on the kind of disc, the displayed screen may be slightly different.
- Finalizing will be taken few minutes. If you turn the unit on/off or open the tray during finalizing, you will not be able to use the disc anymore.

Unfinalizing a disc (V/VR mode)

1 Insert the finalized disc.
Press the MENU button with the disc stopped.

2 Press the ▲▼ button to select Disc Manager, and then press the ENTER or ► button.

3 Press the ▲▼ button to select Disc Unfinalize, and then press the ENTER or ► button.

- You will be prompted with the message 'Do you want to unfinalize disc?'. If you select Yes, you will be prompted again with the message ' Disc will be unfinalized. Do you want to continue?'

Press the ◄► buttons to select Yes, and then press the ENTER button.

- The disc is unfinalized.

- A DVD-RW can be finalized or unfinalized in Video mode.

	Finalize	Unfinalize
Mark	DVD-VIDEO(RW)	DVD-RW(V)
Operation	Same as DVD-Video	Additional recording, protection and deletion are possible.

5-4-1 Holder FL Cassette Ass'y Removal

1) Pull the Holder FL Cassette Ass'y ❶ to the eject position.
2) Pull the Holder FL Cassette Ass'y ❶ as grasping the Holder FL Cassette Ass'y ❶ and Lever FL Cassette-R ❷ in the same time to release hooking from Main Base until the Boss [A] of Holder FL Cassette Ass'y ❶ is taken out from the Rail [B].
3) Lift the Holder FL Cassette Ass'y ❶, in this time, you have to grasp the Lever FL Cassette-R ❷ Continuously until the Holder FL Cassette Ass'y ❶ is taken out completely.

Note : Be sure to insert Lever FL Cassette-R ❷ in the direction of "A" to prevent separation and breakage of the Lever FL Cassette-R ❷ at disassembling and reassembling.

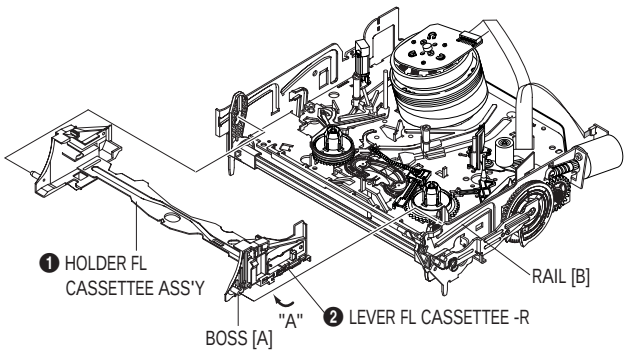

Fig. 5-11 Holder FL Cassette Ass'y Removal

5-4-2 Lever FL Arm Ass'y Removal

1) Push the hole "A" in the direction of arrow "B" use the pin.(about Dia. 2.5)
2) Pull out the Lever FL Arm Ass'y ❶ from the Boss of Main Base.
3) Remove the Lever FL Arm Ass'y ❶ in the direction of arrow "C".

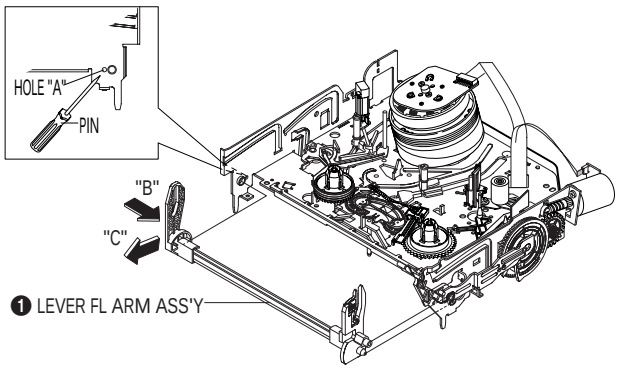

Fig. 5-12 Lever FL Arm Ass'y Removal

5-4-3 Lever FL Door Removal

1) Release the Hook ❷ and Remove the Lever FL Door ❶ in the direction of arrow "A".

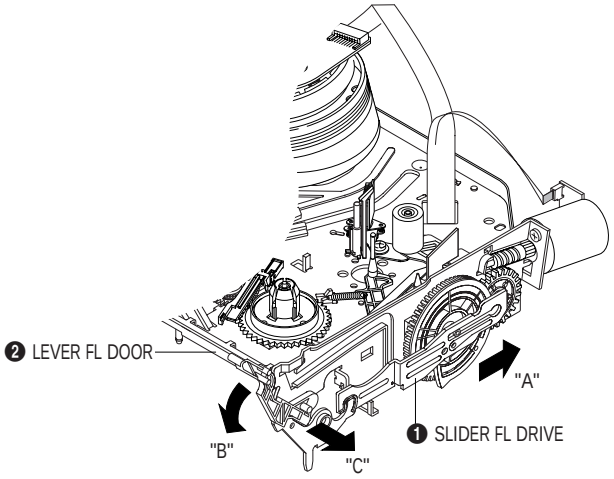

Fig. 5-13 Lever FL Door Removal

5-4-4 Slider FL Drive, Gear FL Cam Removal

1) Pull the Slider FL Drive ❶ to the front direction.
2) Remove the Slider FL Drive ❶ in the direction of arrow. (Refer to Fig. 5-13)
3) Remove the Gear FL cam ❷.

Note : When reinstalling be sure to reassemble Slider FL drive ❶ after you insert the Boss of Lever FL ARM-R in Groove of Slider Fl drive ❶.

Assembly : Align the Gear FL Cam ❶ with the Gear worm wheel Post as shown drawing.
(Refer to Timing point)

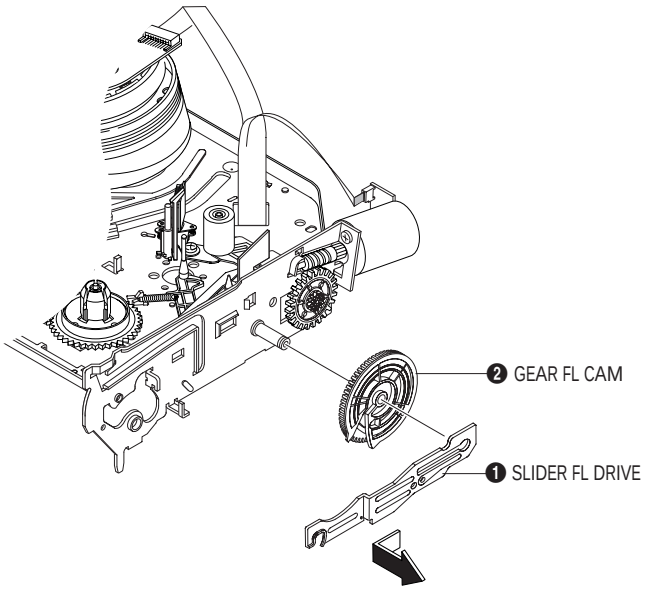

Fig. 5-14 Slider FL Drive Removal

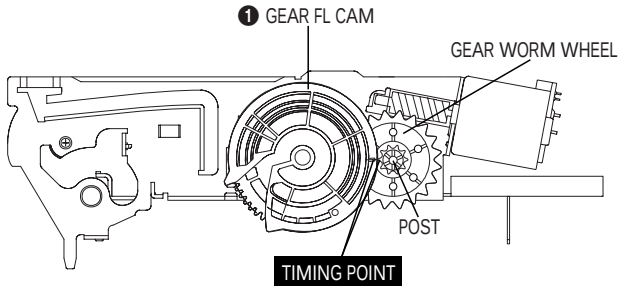

Fig. 5-15 Gear FL Cam, Gear Worm

5-4-5 Gear Worm Wheel Removal

1) Remove the Gear Worm wheel ❶.

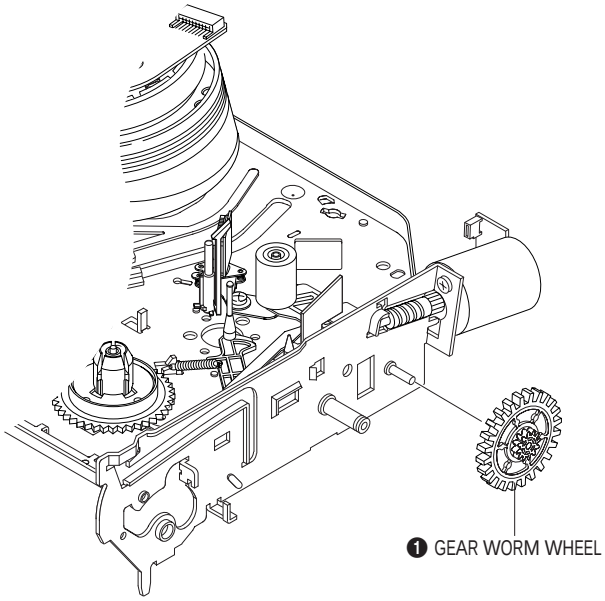

Fig. 5-16 Gear Worm Wheel Removal

5-4-6 Cable Flat Removal

1) Remove the Drum connecting part of Cable Flat ❶ from Connector Waffer ❷.
2) Remove the Loading Motor connecting part of Cable Flat ❶ from Connector Waffer ❸.

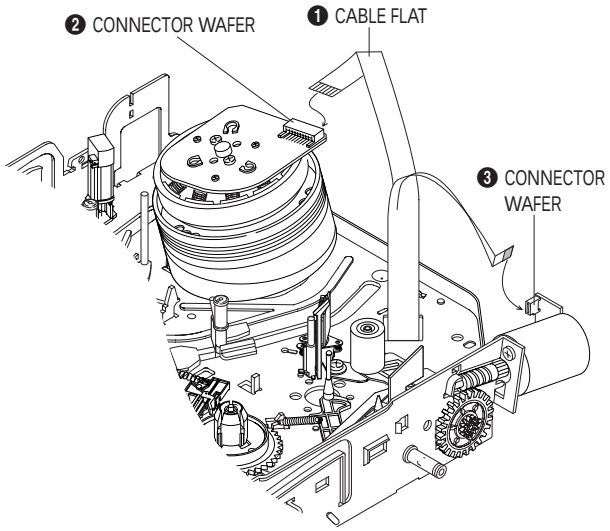

Fig. 5-17 Cable Flat Removal

5-4-7 Motor Loading Ass'y Removal

1) Remove the screw ❶.
2) Remove the Motor Loading Ass'y ❷.

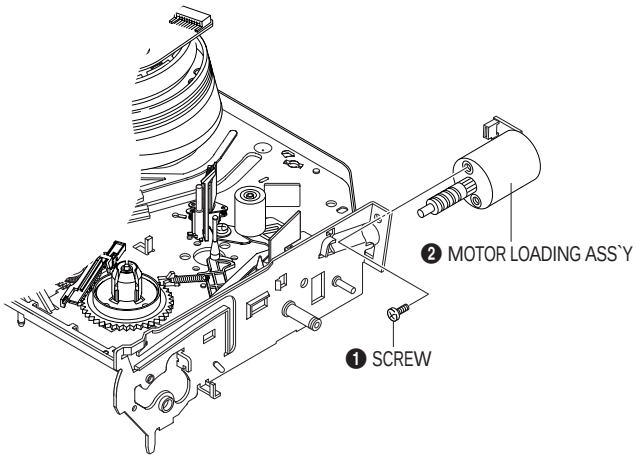

Fig.5-18 Motor Loading Ass'y Removal

5-4-8 Bracket Gear, Gear Joint 2, 1 Removal

1) Remove the SCREW ❶.
2) Remove the Bracket Gear ❷.
3) Remove the Gear Joint 2 ❸.
4) Remove the Gear Joint 1 ❹.

Assembly :
1) Be sure to align dot mark of Gear Joint 1 ❶ with dot mark of Gear Joint 2 ❷ as shown Fig 5-20. (Refer to Timing point1)
2) Confirm the Timing Point 2 of the Gear Joint 2 ❷ and Slider Cam ❸.

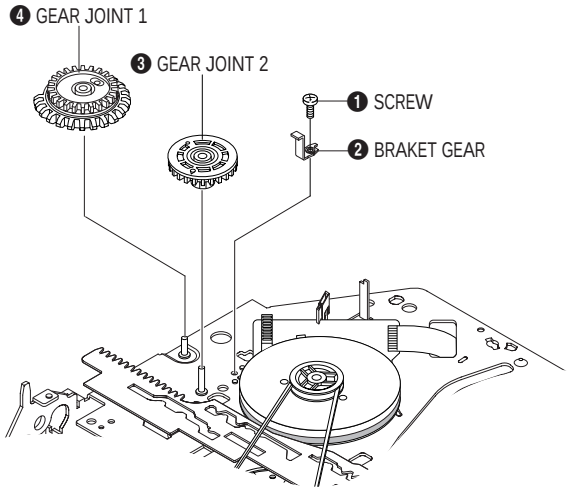

Fig. 5-19 Bracket Gear, Gear Joint 1,2 Removal

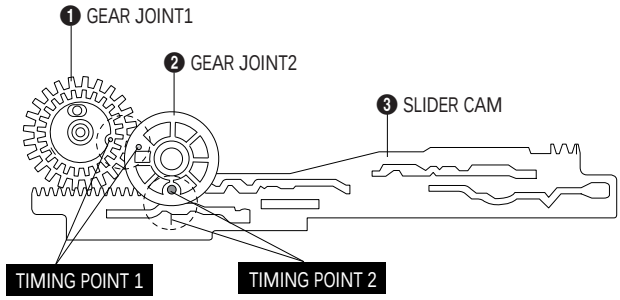

Fig. 5-20 Gear Joint 1,2 Assembly

5-4-9 Gear Loading Drive, Slider Cam, Lever Load S, T Ass'y Removal

1) Remove the Belt Pulley. (Refer to Fig. 5-38)
2) Remove the Gear Loading Drive ❶ after releasing Hook [A] in the direction arrow as shown in detail drawing.
3) Remove the Slider Cam ❷.
4) Remove the Lever Load S Ass'y ❸ & Lever Load T Ass'y ❹.

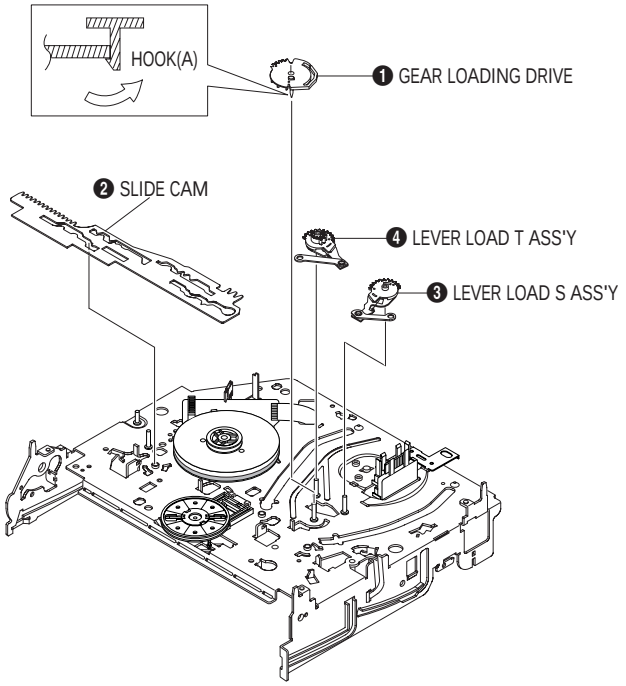

Fig. 5-21 Gear Loading Drive, Slider Cam, Lever T, S Load Ass'y Removal

5-4-10 Gear Loading Drive, Slider Cam, Lever Load S, T Ass'y Assembly

1) When reinstalling, be sure to align dot of Lever Load T Ass'y ❶ with dot of Lever Load S Ass'y ❷ as shown in drawing, (Refer to Timing Point 1).
2) Insert the Pin A,B,C,D into the Slider Cam ❸ hole,
3) Be sure to align dot of Lever Load T ❶ and dot of Gear Loading Drive ❹, (Refer to Timing Point 2).
4) Aline dot of Gear Loading drive ❹ with mark of Slider Cam ❸ as shown in drawing(Refer to Timing Point 3).

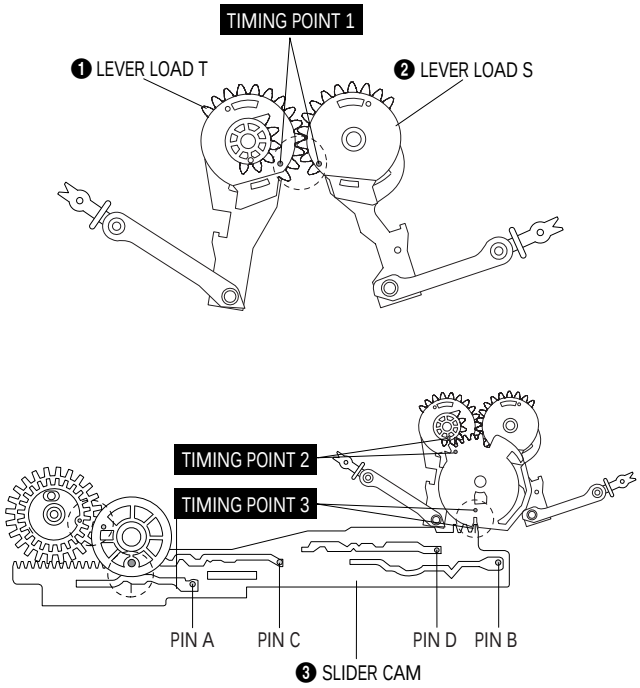

Fig. 5-22 Gear Loading Drive, Slider Cam, Lever Load S, T Ass'y Assembly

5-4-11 Lever Pinch Drive, Lever Tension Drive Removal

1) Remove the Lever Pinch Drive ❶, Lever Tension Drive ❷.

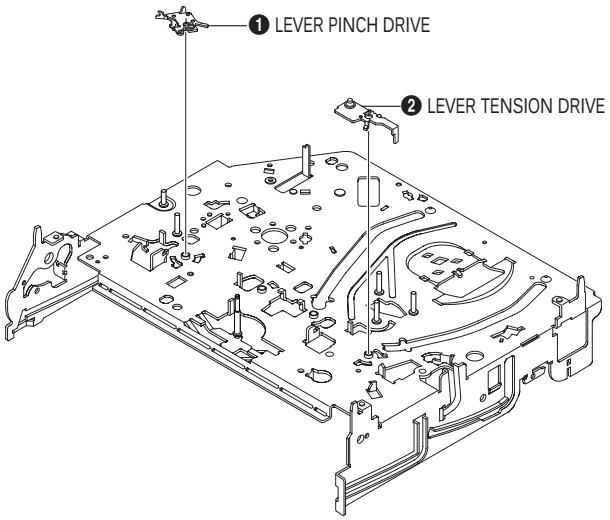

Fig. 5-23 Lever Pinch Drive, Lever Tension Drive Removal

5-4-12 Lever Tension Ass'y, Band Brake Ass'y Removal

1) Remove the Lever Brake S Ass'y (Refer to Fig 5-25).
2) Remove the Spring Tension Lever ❶.
3) Rotate stopper of Main Base in the direction of arrow "A".
4) Lift the Lever Tension Ass'y ❷ & Band brake Ass'y ❸.

Note :

1) When replacing the Lever Tension Ass'y ❷, be sure to apply Grease on the post,
2) Take care not to touch stain on the felt side, and not to be folder and broken Band brake Ass'y
3) After Lever Tension Ass'y seated, Rotate stopper of Main Base to the Mark[B].

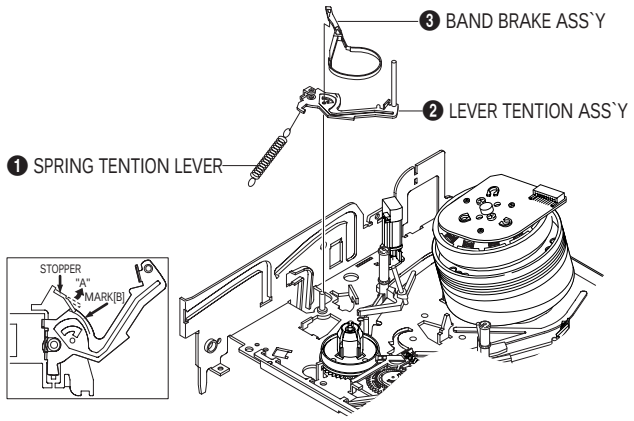

Fig. 5-24 Lever Tension Ass'y, Band Brake Ass'y Removal

5-4-13 Lever Brake S, T Ass'y Removal

1) Release the Hook [A] and the Hook [B], [C] in the direction of arrow as shown in Fig 5-25.
2) Lift the Lever S, T Brake Ass'y ❶, ❷ with spring brake ❸.

Assembly :
1)Assembly the Lever S Brake Ass'y ❶ on the Main Base.
2)Assembly the Lever T Brake Ass'y ❷ with spring brake ❸.

Note : Take extreme care not to be folded and transformed Spring Brake at removing or reinstalling.

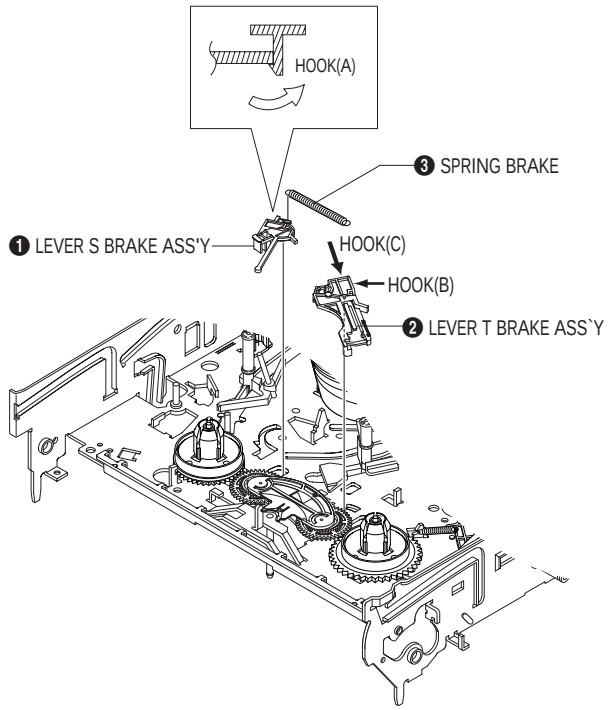

Fig. 5-25 Lever Brake S, T Ass'y Removal

5-4-14 Gear Idle Ass'y Removal

1) Push the Lever Idle ❶ in the direction of arrow "A", "B".
2) Lift the Lever Idle ❶.

Assembly :
1) Apply oil in two Bosses of Lever Idle ❶.
2) Assemble the Gear Idle ❷ with the Lever Idle ❶.

Note : When replacing the Gear Idle ❷, be sure to add oil in the boss of Lever Idle ❶.

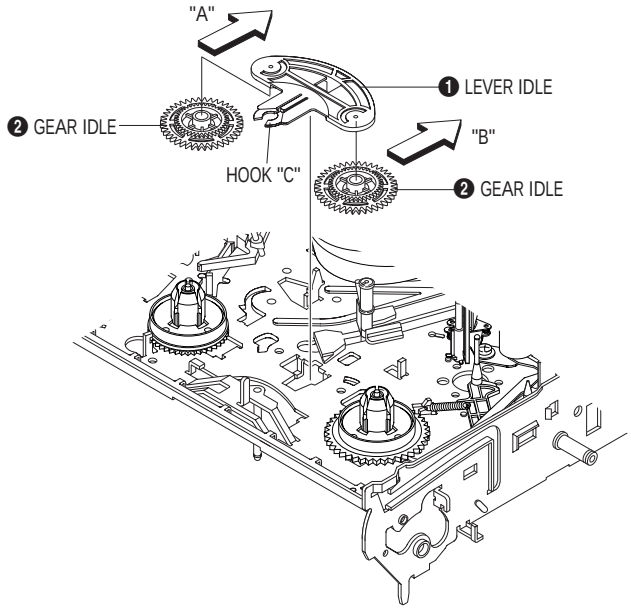

Fig. 5-26 Gear Idle Ass'y Removal

5-4-15 Disk S, T Reel Removal

1) Lift the Disk S, T Reel ❶, ❷.

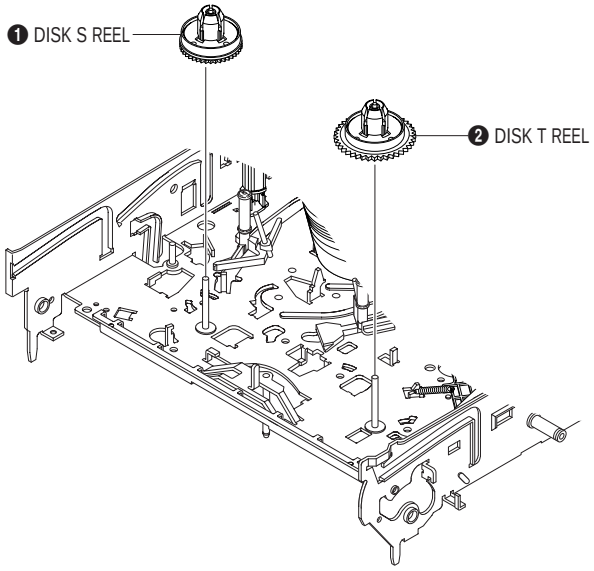

Fig. 5-27 Disk S, T Reel Removal

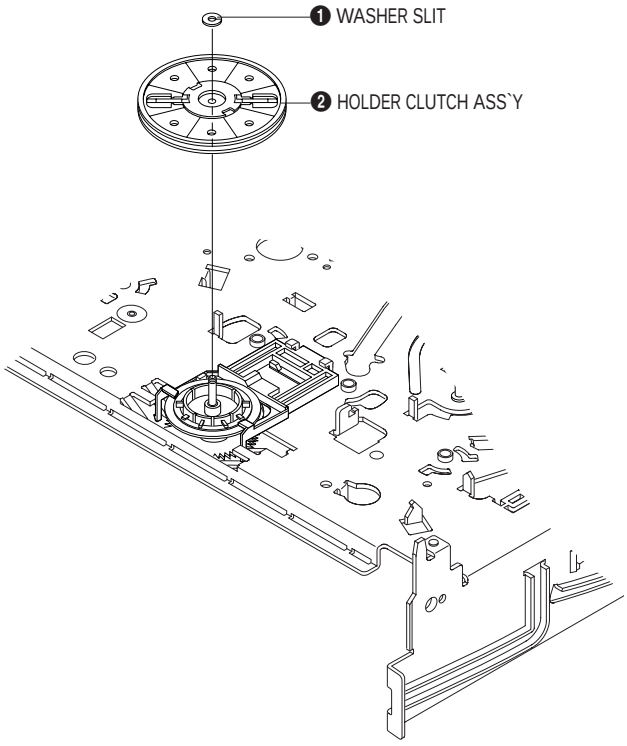
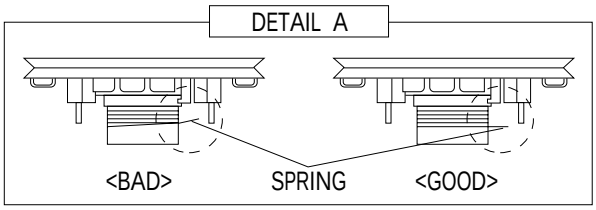
5-4-16 Holder Clutch Ass'y Removal

1) Remove the Washer Slit ❶.
2) Lift the Holder Clutch Ass'y ❷.

Note : When you reinstall Holder Clutch Ass'y
1) Check the condition of spring as shown in detail A.
2) Don't push Holder Clutch Ass'y down with excessive force Just insert Holder Clutch Ass'y into post center with dead force and Rotate it smoothly.
Be sure to confirm that spring is in the slit of Gear Center Ass'y as shown in detail B.





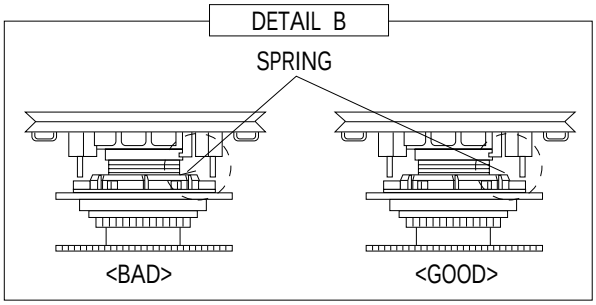


Fig. 5-28 Holder Clutch Ass'y Removal

5-4-17 Lever Up Down Ass'y, Gear Center Ass'y Removal

1) Remove the 2 hooks in the direction of arrow as shown Fig. 5-28 and lift the Lever Up Down Ass'y ❶.
2) Lift the Gear Center Ass'y ❷.

Assembly :
1) Insert the Lever Up Down Ass'y ❶ in the rectangular holes on Main Base as shown in Fig 5-30.
2) Lift the Lever Up Down Ass'y ❶ about 35°. (Refer to Fig 5-30)
3) Insert Ring of the Gear Center Ass'y ❷ in the Guide of the Lever Up Down Ass'y ❶.
4) Insert the Gear Center Ass'y ❷ in the post on Main Base.
5) Push down the Lever Up Down Ass'y ❶ for locking of the Hook.

Note :
1) Take care not to separate and sentence does not mark sense.
2) Be sure to confirm that Ring of the Gear Center Ass'y ❷ is in the Guide of the Lever Up Down Ass'y ❶ after finishing assembly of Lever Up Down Ass'y ❶ and Gear Center Ass'y ❷.

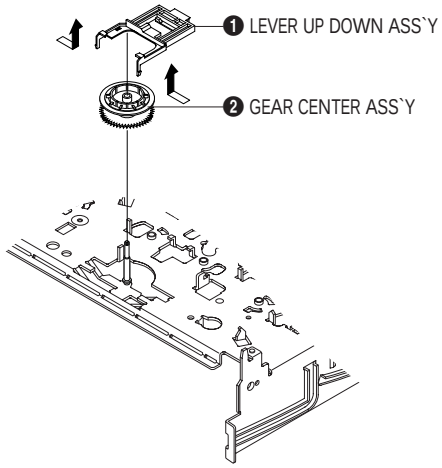

Fig. 5-29 Lever Up Down Ass'y Removal

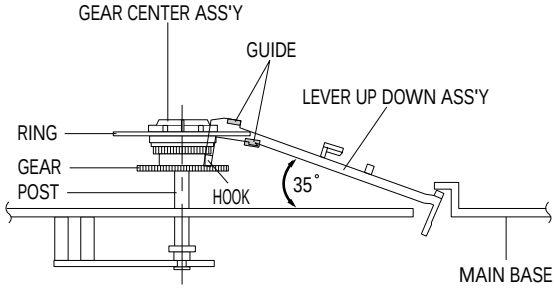

Fig. 5-30 Lever Up Down Ass'y Removal

5-4-18 Guide Cassette Door Removal

1) Lift the Hook [A].
2) Rotate the Guide Cassette Door ❶ in the direction of arrow.

Note : After reinstalling the Guide Cassette Door ❶ sure the Hook [A].

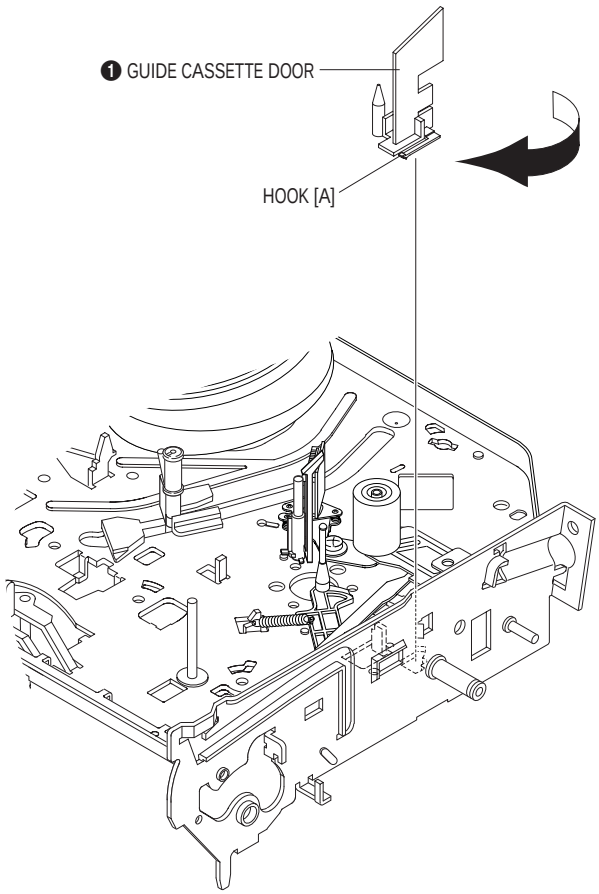

Fig. 5-31 Guide Cassette Door Removal

5-4-19 Lever Unit Pinch Ass'y, Plate Joint, Spring Pinch Drive Removal

1) Lift the Unit Pinch Ass'y ❶.
2) Remove the Plate Joint ❷ from Lever Pinch Drive.
3) Remove the Spring Pinch Drive ❸.

Note :
1) Take extreme care not to touch the grease on the Roller Pinch.
2) When reinstalling, be sure to apply grease on the post pinch roller.

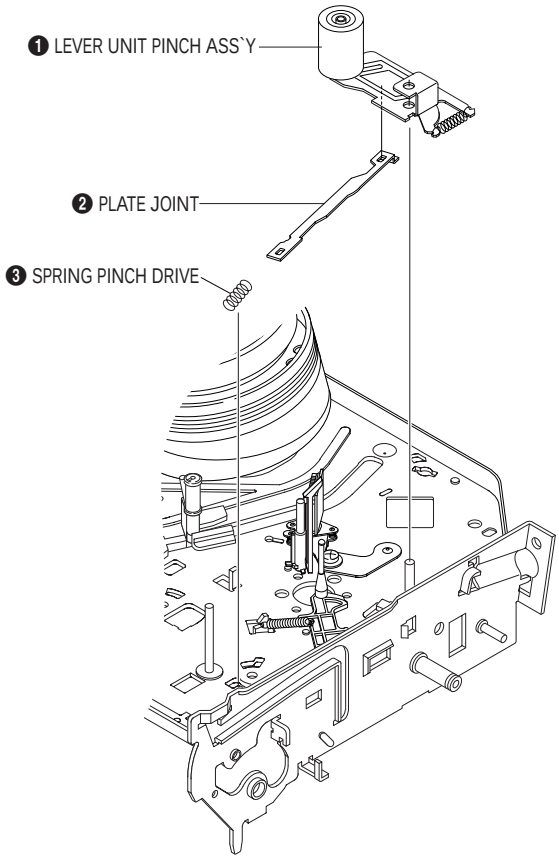

Fig. 5-32 Lever Unit Pinch Ass'y, Plate Joint, Spring Pinch Drive Removal

5-4-20 Lever #9 Guide Ass'y Removal

1) Remove the Spring #9 Guide ❶.
2) Lift the Spring #9 Guide Ass'y ❷ in the direction of arrow "A".

Note :
1) Take extreme care not to get grease on the tape Guide Post.
2) After reinstalling, check the bottom side of the Post #9 Guide to the top side of Main Base.

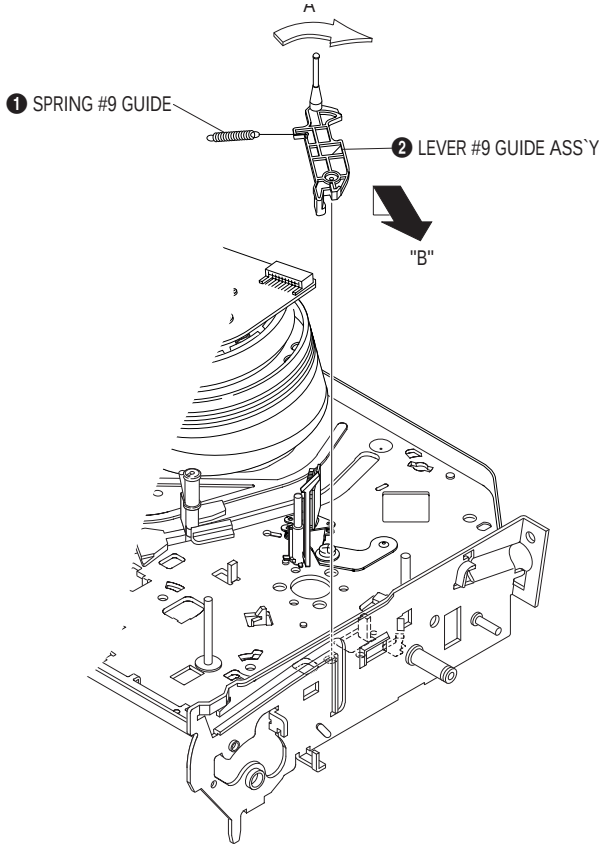

Fig. 5-33 Lever #9 Guide Ass'y Removal

5-4-21 FE Head Removal

1) Remove the screw ❶.
2) Lift the FE Head ❷.

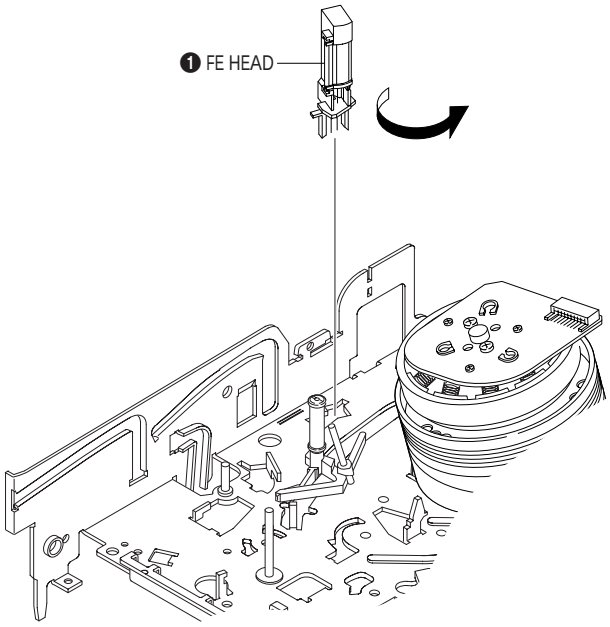

Fig. 5-34 FE Head Removal

5-4-22 ACE Head Removal

1) Pull out the FPC from connector of ACE Head Ass'y ❷.
2) Remove the screw ❶.
3) Lift the ACE Head Ass'y ❷.

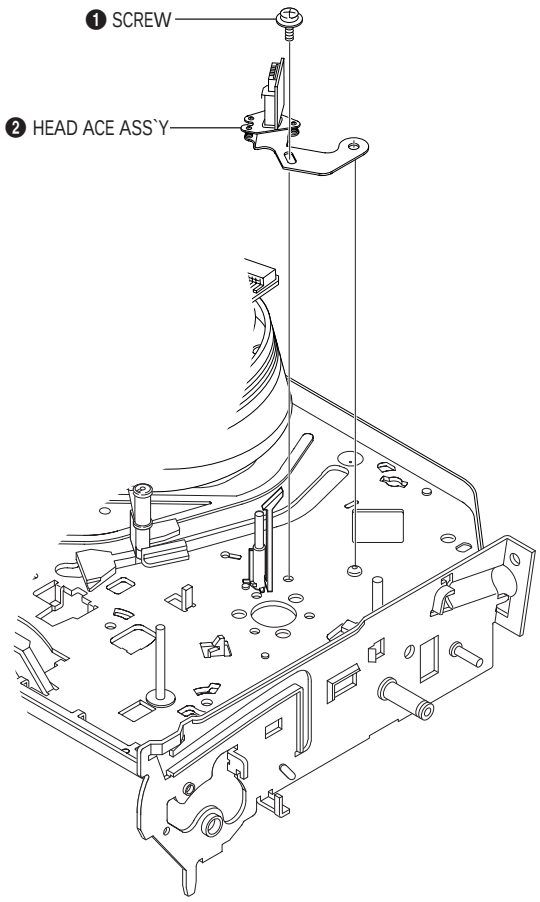

Fig. 5-35 ACE Head Removal

5-4-23 Slider S, T Ass'y Removal

1) Move the Slider S, T Ass'y ❶, ❷ to slot, and then lift it to remove. (Refer to arrow)

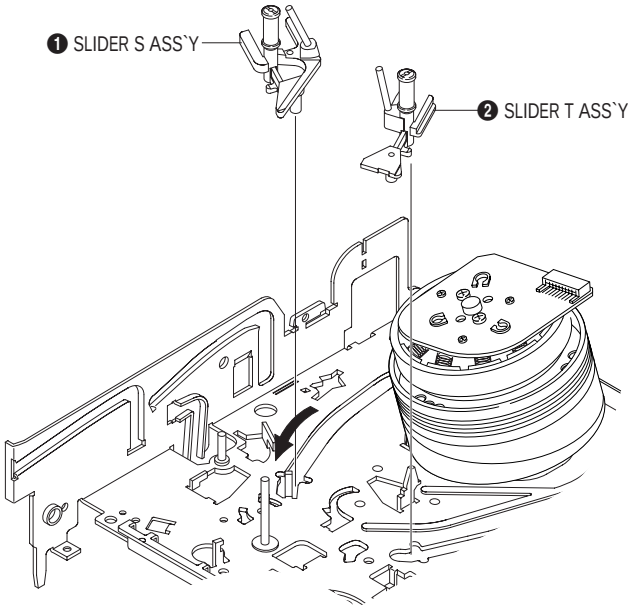

Fig. 5-36 Slider S, T Ass'y Removal

5-4-24 Plate Ground Deck, Cylinder Ass'y Removal

1) Remove the 3 Screws ❶.
2) Lift the Plate Ground Deck ❷.
3) Lift the Cylinder Ass'y ❸.

Assembly :
1) Match the 3 holes in the bottom of Cylinder ass'y ❸ to the 3 holes of Main Base as attending not to drop or knock the Cylinder ass'y ❸.
2) Tighten the 1 Screw ❶.
3) Match the Plate Ground Deck ❷ to the Hole of Base Main.
4) Tighten the other 2 Screws ❶.

Note :
1) Take care not to touch the Cylinder Ass'y ❸ and the tape guide post at reinstalling.
2) When reinstalling, Don't push down too much on Screw Driver.

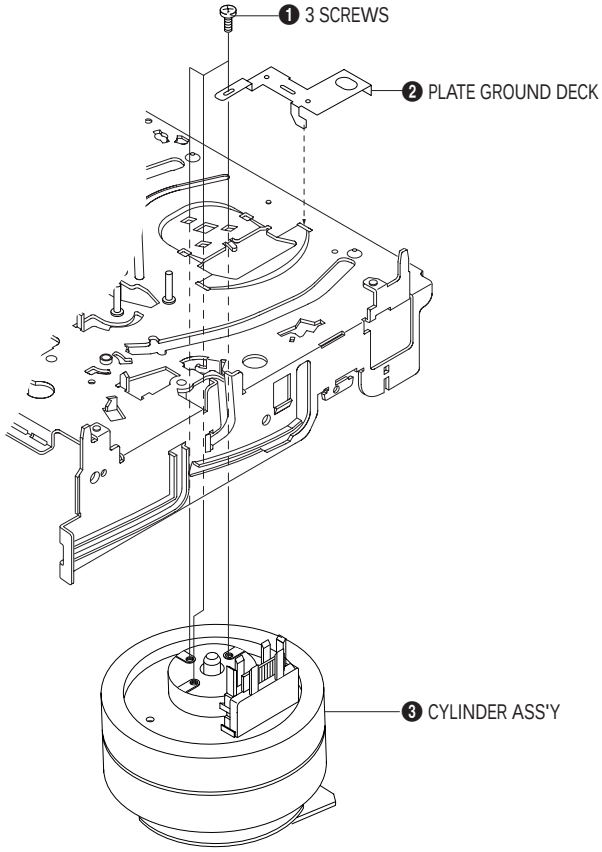

Fig. 5-37 Plate Ground Deck, Cylinder Ass'y Removal

5-4-25 Hook Capstan, Belt Pulley Removal

1) Remove the Hook Capstan ❶ after realeasing Hook in the direction arrow as shown in detail drawing.
2) Remove the Belt Pulley ❷.

Note : Take extreme care not to get grease on Belt Pulley ❷ at assembling or reassembling.

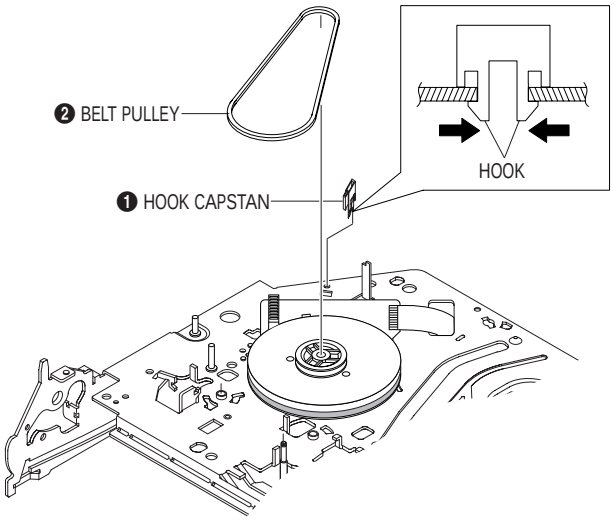

Fig. 5-38 Hook Capstan, Belt Pulley Removal

5-4-26 Motor Capstan Ass'y Removal

1) Remove the Damper Capstan ❶ in the direction of arrow.
2) Remove the 3 Screws ❷.
3) Remove the Motor Capstan Ass'y ❸.

Assembly :
1) Match the 3 holes of Motor Capstan Ass'y ❸ to the 3 holes of Main Base. Be careful not to drop or knock the Motor Capstan Ass'y ❸.
2) Tighten the 3 Screws ❷ in the direction of arrow as shown detail drawing.
3) Assemble the Damper Capstan ❶.

Note : After tightening screws, check if there is gap between the head of screws and the top side of Main Base. There should have no gap between the head of screws and the top side of Main Base.
After reinstalling, adjusting the tape transport system again.

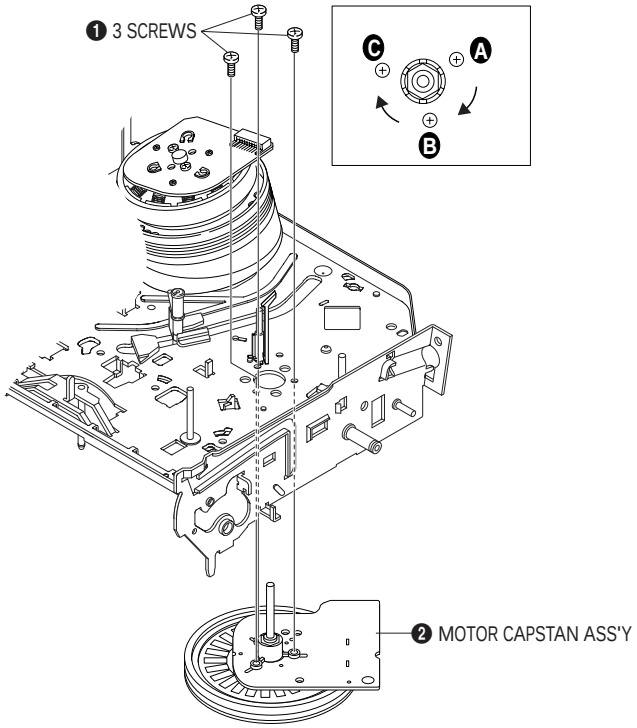

Fig. 5-39 Motor Capstan Ass'y Removal

5-4-27 Post #8 Guide Ass'y Removal

1) Rotate the Post #8 Guide Ass'y ❶ in the direction of arrow to lift up.

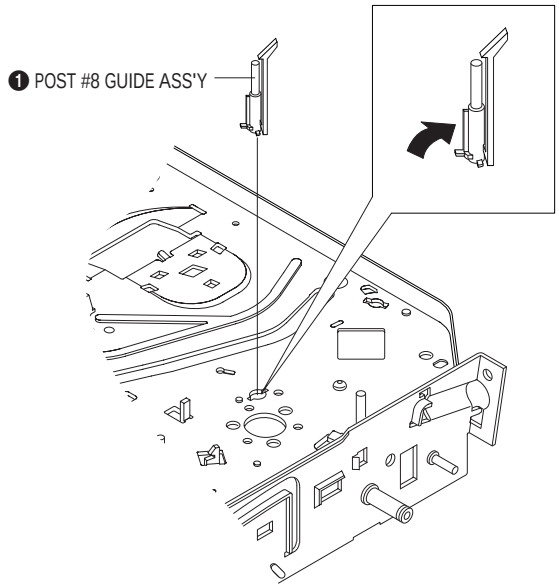

Fig. 5-40 Post #8 Guide Ass'y Removal

5-4-28 Level Head Cleaner Ass'y Removal (Optional)

1) Release the Hook ❶.
2) Lift the Lever Head Cleaner Ass'y ❷.

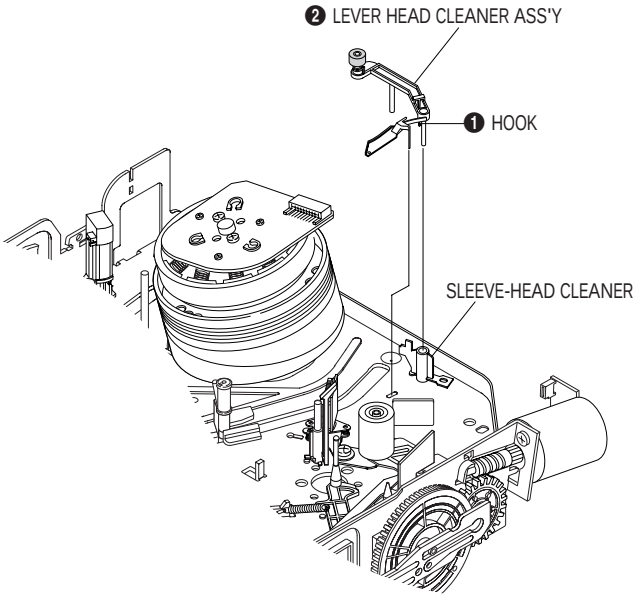

Fig. 5-41 Lever Head Cleaner Ass'y Removal

5-4-29 How to Eject the Cassette Tape (If the unit does not operate on condition that is inserted into housing ass'y)

1) Turn the Gear worm ❶ clockwise with screw driver.(Refer to arrow)
(Other method : Remove the Screw of Motor Load Ass'y, Separate the Motor Load Ass'y)

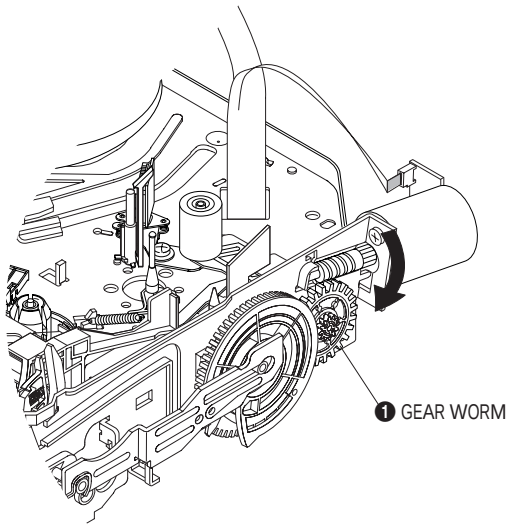

Fig. 5-42

2) When Slider S,T are approched in the position of unloading, rotate holder Clutch counterclockwise after inserting screw driver in the hole of frame's bottom in order to wind the unwinded tape. (Refer to Fig.5-43)
(If you rotate Gear Worm ❶ continuously when tape is in state of unwinding, you may cause a tape contamination by grease and tape damage. Be sure to wind the unwinded tape in the state of set horizontly.)
3) Rotate Gear Worm ❶ clockwise using screw driver again up to the state of eject mode and then pick out the tape.(Refer to Fig.5-42)

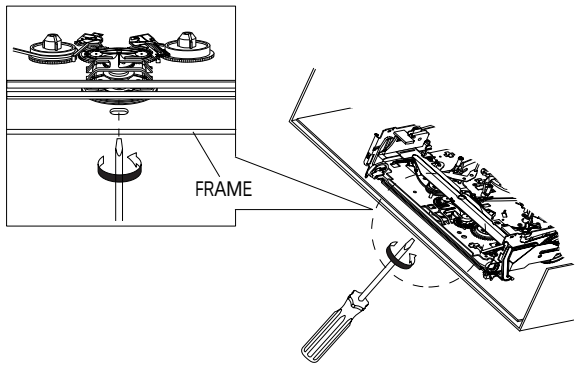

Fig. 5-43

5-5 The table of cleaning, Lubrication and replacement time about principal parts

1) The replacement time of parts is not life of parts.
2) The table 5-1 is that the VCR Set is in normal condition (normal temperature, normal humidity).
   The checking period may be changed owing to the condition of use, runtime and environmental conditions.
3) Life of the Cylinder Ass'y is depend on the condition of use.
4) See exploded view for location of each parts.

<Table 5-1>

*	Parts Name	Checking Period										Remark
		500	1000	1500	2000	2500	3000	3500	4000	4500	5000	
TAPE PATH SYSTEM	POST TENSION	Δ	Δ	Δ	Δ	Δ	Δ	Δ	Δ	Δ	Δ	- To clean the parts, use patch and alcohol (solvent). - After cleaning, use the video tape after alcohol is gone away completely. - We recommend to use oil [EP-50] or solvent. - One or two drops of oil should be applied after cleaning with alcohol.

6. Alignment and Adjustments

6-1 VCR Adjustment

6-1-1 Reference

1) X-Point (Tracking center) adjustment, “Head switching adjustment” and “NVRAM option setting” can be adjusted with remote control.
2) When replacing the Main PCB Micom (IC601) and NVRAM (IC603 ; EEPROM) be sure to adjust the “Head switching adjustment” and “NVRAM option setting”.
3) When replacing the cylinder ass’y, be sure to adjust the “X-Point” and “Head switching adjustment”.
4) How to adjust.
   - Intermittently short-circuit the Test Point on Main PCB with pincers to the adjustment mode.
   - If the corresponding adjustment button is pressed, the adjustment is performed automatically.
   - When the adjustment is completed, be sure to turn the power off.

6-1-1(a) Location of adjustment button of remote control

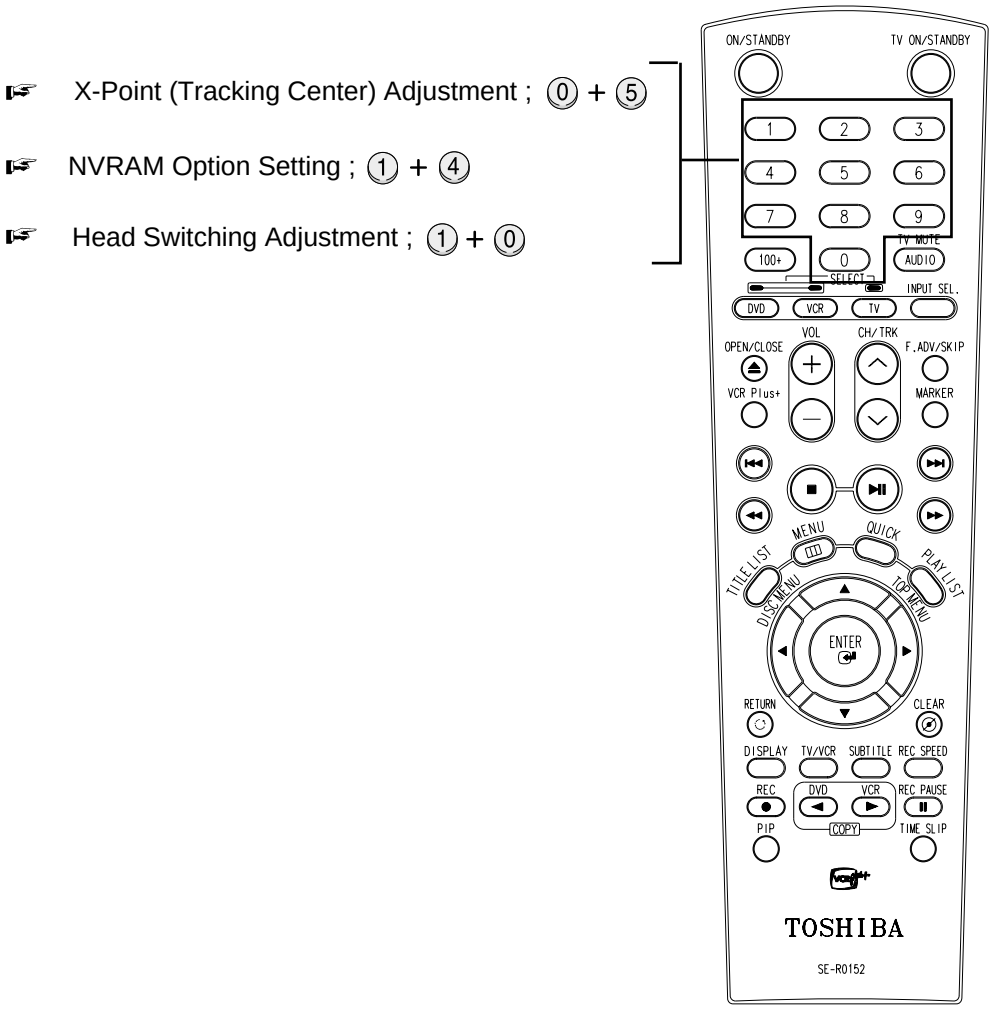

Fig. 6-1

6-1-1(b) TEST location for adjustment mode setting

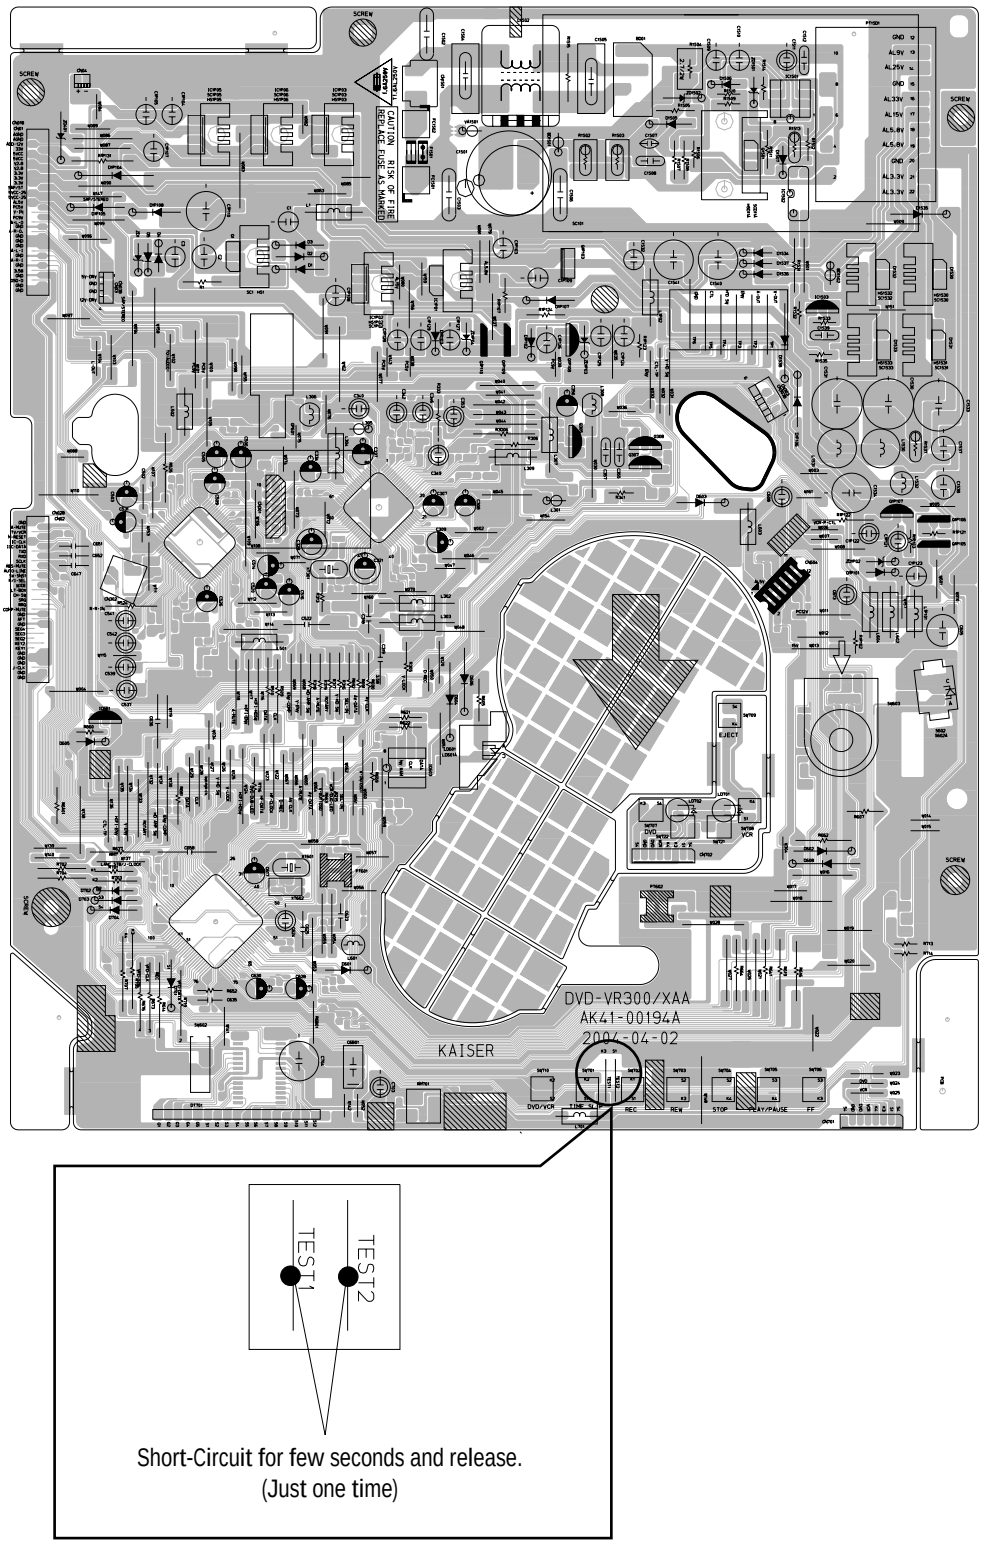

Fig. 6-2 VCR Main PCB (Top View)

6-1-2 Head Switching Point Adjustment

1) Playback the alignment tape.
2) Intermittently short-circuit the two Test Points on VCR Main PCB while setting the adjustment mode. (See Fig. 6-2)
3) Press the “1, 0” buttons; remote control adjustment operates automatically. (See Fig. 6-1)

6-1-3 NVRAM Option Setting

1) NVRAM Option is adjusted in the factory.
2) In case Main PCB Micom (IC601) and NVRAM (IC603 ; EEPROM) are replaced, be sure to set the corresponding option number of the required model. (If the option is not set, the unit will not operate.)

1) Intermittently short-circuit the two Test Points on VCR Main PCB. (See Fig. 6-2)
2) Press the “1, 4” button on the remote control. The option setting appears. (See Fig. 6-3)
3) Select the option number (See table 6-1) of corresponding model with “◀, ▶, ▲, ▼” buttons on the remote control.
4) After selecting the option number is completed, press the “▲” button of remote control. (If “▲” button is pressed, the selected number is changescolor. ; See Fig. 6-4)
5) Press the “ENTER” button of remote control again to store the option number.
6) Turn the Power off.

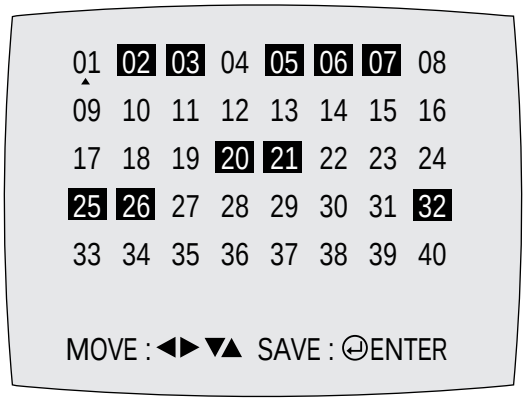

Fig. 6-3

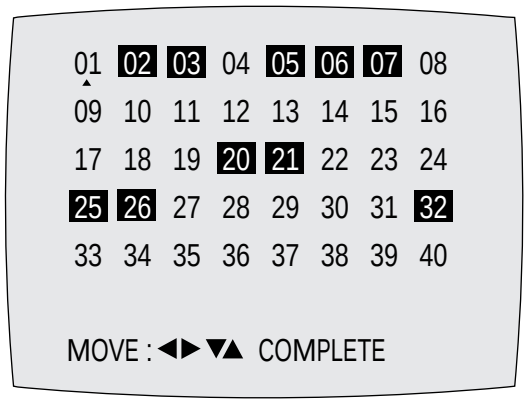

Fig. 6-4

<Table 6-1 NVRAM Option Table>

MODEL	OPTION NUMBERS
D-VR3SU, D-VKR3SU	2, 3, 5, 6, 7, 20, 21, 25, 26, 32
D-VR3SC	2, 3, 5, 6, 7, 16, 20, 21, 25, 26, 32

6-2 VCR Mechanical Adjustment

6-2-1 Tape Transport System and Adjustment Locations

The tape transport system has been adjusted precisely in the factory. Alignment is not necessary except for the following :
1) Noise observed on the screen.
2) Tape damage.
3) Parts replacement in the tape transport system.

Lower flange height of tape guide is used as the reference for the transport adjustment.
To maintain the height of the tape guide and prevent damage, do not apply excessive force onto the main base.

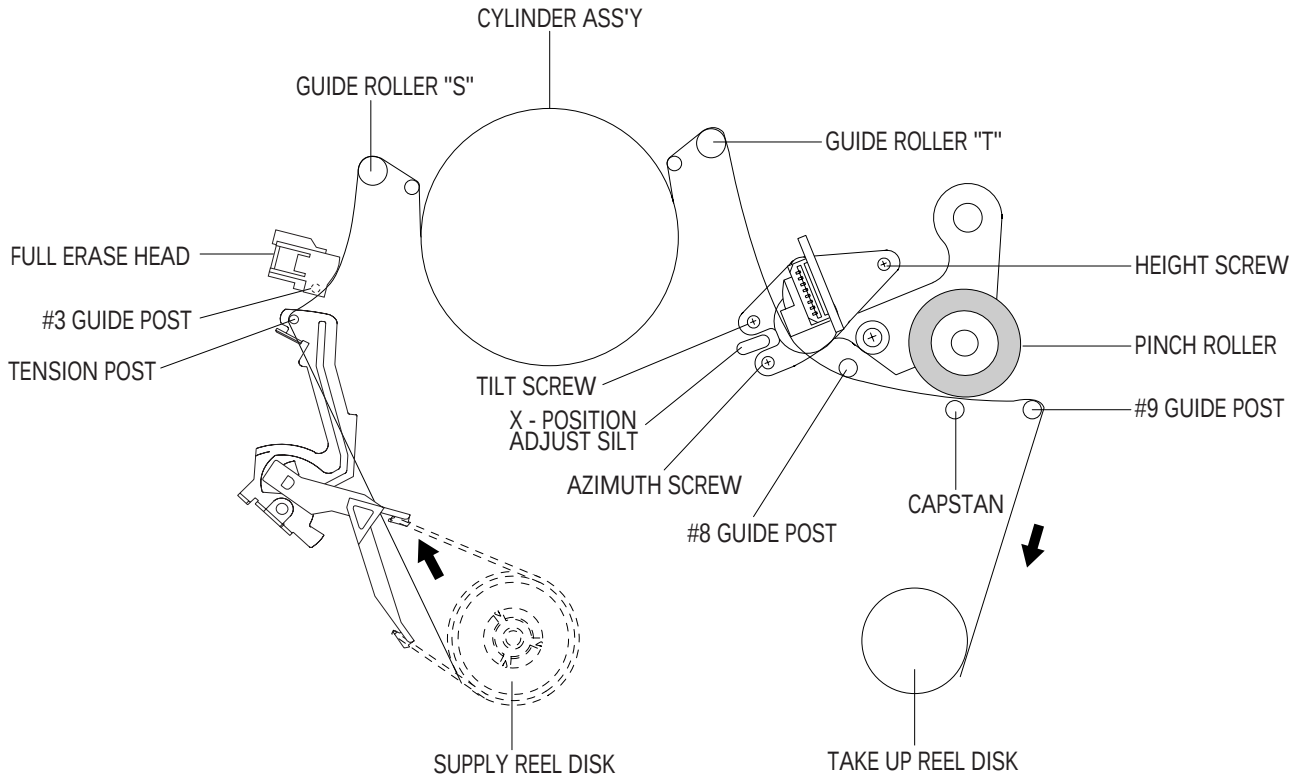

Fig. 6-5 Location of Tape Transport Adjustment

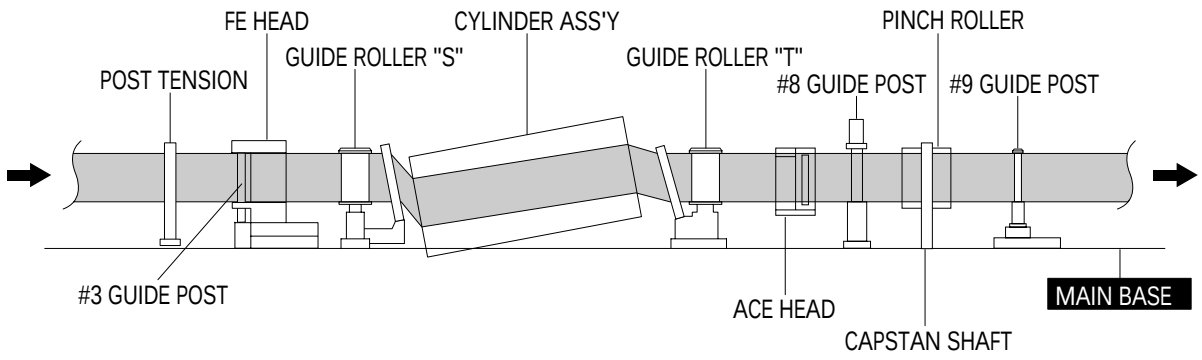

Fig. 6-6 Tape Travel Diagram

6-2-2 Tape Transport System Adjustment

When parts are replaced, perform the required adjustments by referring to procedures for the tape transport system. If there are any changes to the tape path, first run a T-120 tape and make sure excessive tape wrinkle does not occur at the tape guides.

◆ If tape wrinkle is observed at the guide roller S, T, turn the guide roller S, T until wrinkle disappears.
◆ If the tape wrinkle is still observed at the tape guide, perform the tilt adjustment of the ACE head.

(1) ACE Head Assembly Adjustment

a. ACE HEAD HEIGHT ADJUSTMENT

1) Run the alignment tape (Color bar) in the playback mode.
2) Observe surface of the audio head using a dental mirror.
3) Turn screw (C) clockwise or counterclockwise until the gap of lower tape edge and the lower edge of the control head is about 0.25mm. (Refer to Fig. 6-7 and 6-8)

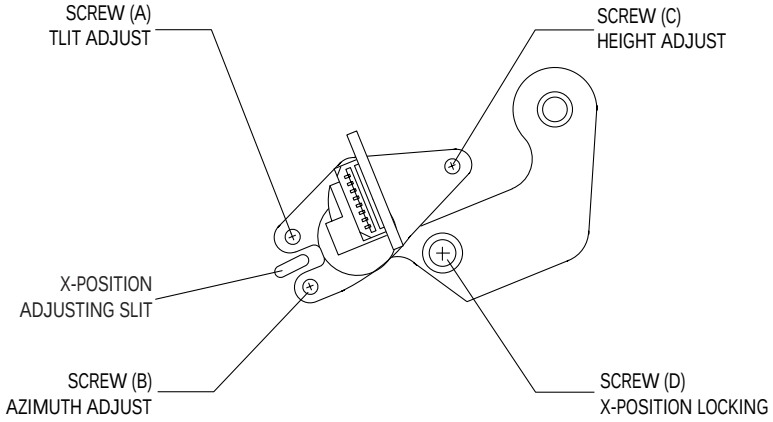

Fig. 6-7 Location of ACE Head Adjustment Screw

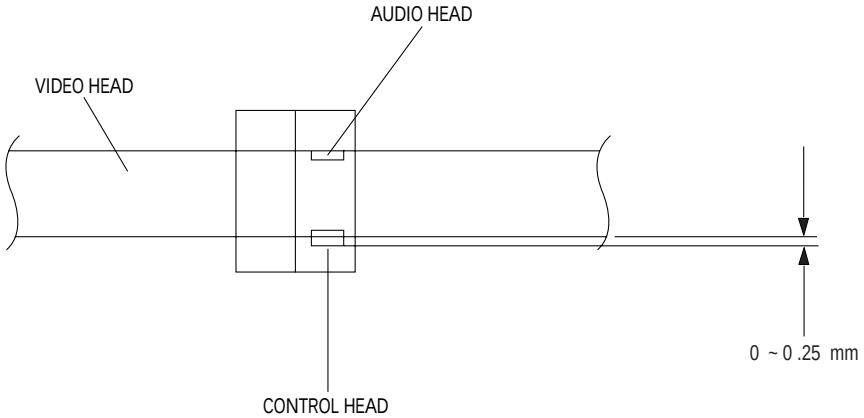

Fig. 6-8 ACE Head Height Adjustment

b. ACE HEAD TILT ADJUSTMENT

1) Playback a blank tape and observe the position of the tape at the lower flange of tape guide.
2) Confirm that there is no curl or wrinkle at the lower flange of tape guide as shown in Fig. 6-9 (B).
3) If a curl or wrinkle of the tape occurs, slightly turn the screw (A) tilt adjust on the ACE head ass'y.
4) Reconfirm the ACE head height.

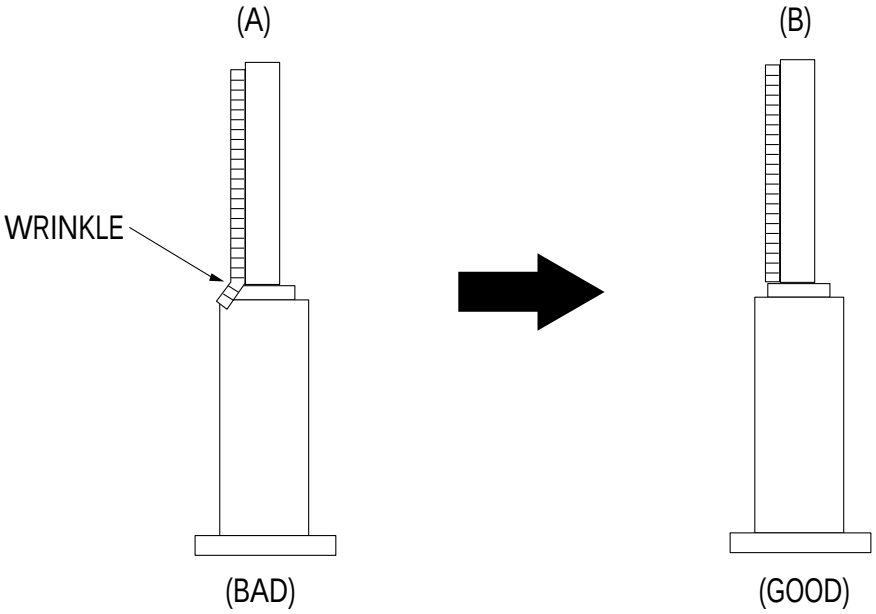

Fig. 6-9 Tape Guide Check

c. AUDIO AZIMUTH ADJUSTMENT

1) Load alignment tape (Mono scope) and playback the 7KHz signal.
2) Connect channel-1 scope probe to audio output.
3) Adjust screw (B) to achieve maximum audio level. (See Fig. 6-7)

d. ACE HEAD POSITION (X-POINT) ADJUSTMENT

1) Playback the alignment tape (Color bar)
2) Intermittently short-circuit the two Test Points on VCR Main PCB. (See Fig. 6-2)
3) Press the “0, 5” remote control buttons, then adjustment operates automatically. (See Fig. 6-1)
4) Connect the CH-1 probe to “Envelope” the CH-2 probe to “H’D switching pulse” and then trigger to CH-1.
5) Insert the (-) driver into the X-Point adjustment hole and adjust it so that envelope waveform is maximum.

Test point :	TP2 (Audio Output)
	TP3 (Envelope)
	TP4 (H’D S/W -Trigger)
	TP5 (Control Pulse)

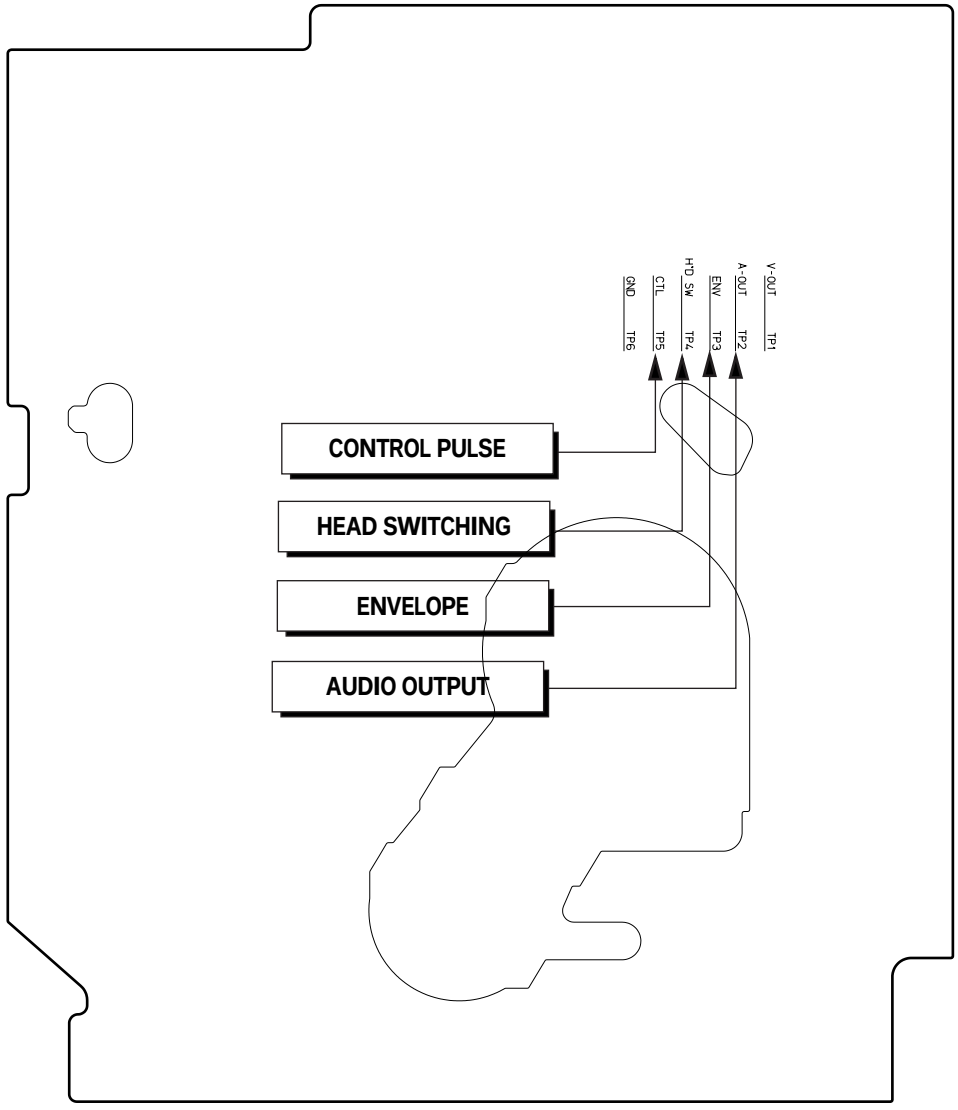

Fig. 6-10 Location of Test point (VCR Main PCB-Top View)

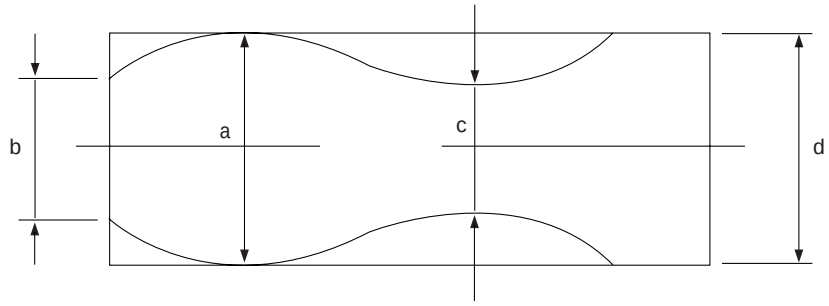
(2) Linearity adjustment (Guide roller S, T adjustment)

1) Playback the Mono Scope alignment tape (SP mode).
2) Observe the video envelope signal on an oscilloscope (triggered by the video switching pulse).
3) Make sure the video envelope waveform (at its minimum) meets the specification shown in Fig. 6-11.
   If it does not, adjust as follows :

Note :
a=Maximum output of the video RF envelope.
b=Minimum output of the video RF envelope at the entrance side.
c=Minimum output of the video RF envelope at the center point.
d=Maximum output of the video RF envelope at the exit side.

4) If the section A in Fig. 6-12 does not meet the specification, adjust the guide roller S up or down.
5) If the section B in Fig. 6-12 does not meet the specification, adjust the guide roller T up or down.



a b c d

c,b,d/a ≧ 63%

Fig. 6-11 Envelope Waveform Adjustment

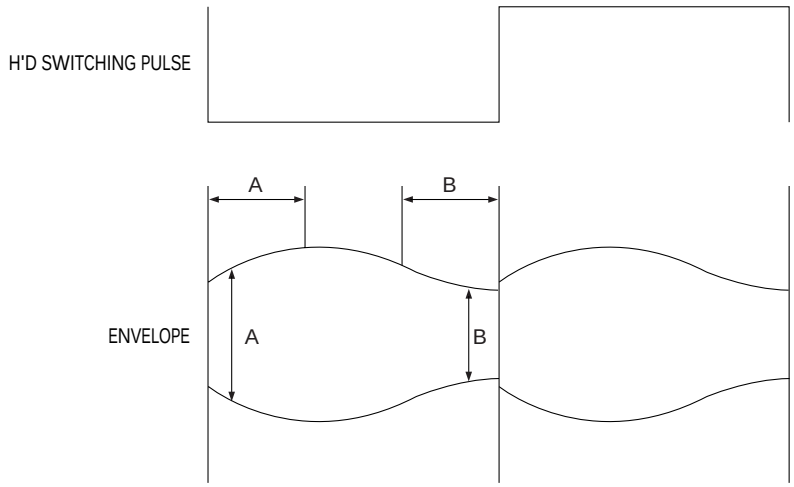


Fig. 6-12 Adjustment Points

6) Play back the Mono Scope alignment tape (SP mode).
7) Connect an oscilloscope CH-1 to the “Envelope” and CH-2 to the “H’D SW Pulse” for triggering.
8) Turn the guide roller heads with a flat head ( ) driver to obtain a flat video RF envelope as shown in Fig. 6-13.

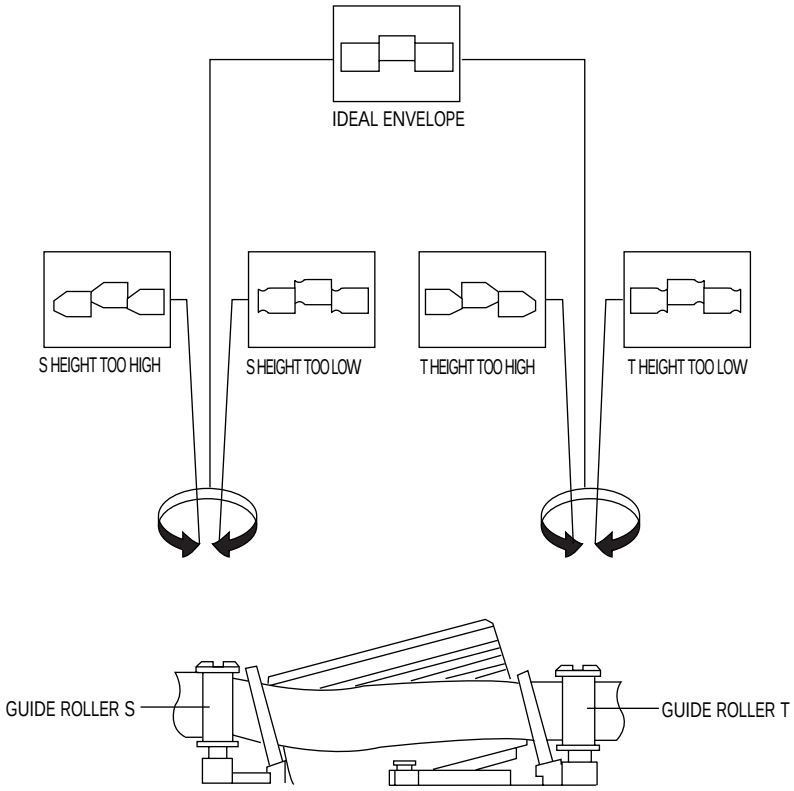

Fig. 6-13 Guide Roller S, T Height Adjustment

(3) Check Transitional Operation from RPS to Play

Check transition from RPS mode to play mode : Using a pre-recorded SP tape, make sure the entry side of envelope comes to an appropriate steady state within 3 seconds (as shown in Fig. 6-14).
If the envelope waveform does not reach specified peak-to peak amplitude within 3 seconds, adjust as follows :

1) Make sure there is no gap between the supply roller lower flange and the tape.
   If there is a gap, adjust the supply guide roller again.
2) Change operation mode from the RPS to the play mode (again) and make sure the entry side of envelope rises within 3 seconds.

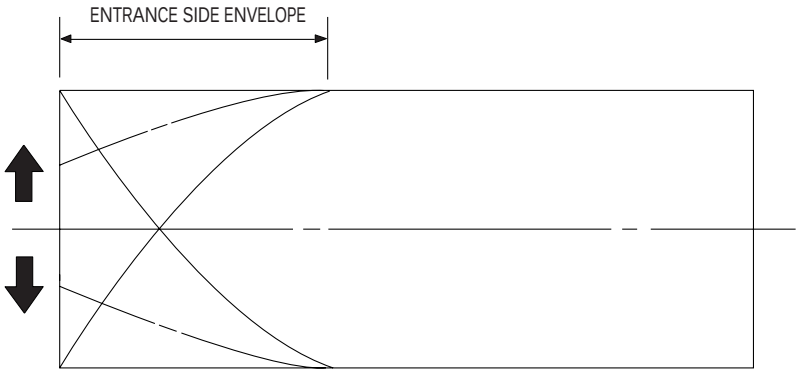

Fig. 6-14 Video Envelope Rising when Operation mode Changes from RPS to Play Mode

(4) Envelope Check

1) Make recordings on T-120 (E-120) and T-160 (E-180) tape.
   Make sure the playback output envelope meets the specification as shown in Fig. 6-15.
2) Play back a self recorded tape (recording made on the unit using with T-120 (E-120).
   The video envelope should meet the specification as shown in Fig. 6-15.
   In SP mode, (A) should equal (B).
   If the head gap is wide, upper cylinder should be checked.

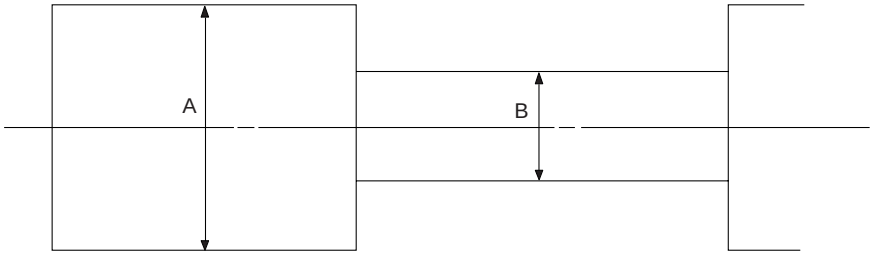

Fig. 6-15 Envelope Input and Output Level

(5) Tape Wrinkle Check

1) Run the T-160 (E-180) tape in the playback, FPS, RPS and Pause modes and observe tape wrinkle at each guide.
2) If excessive tape wrinkle is observed, perform the following adjustments in Playback mode :

- ◆ Tape wrinkle at the guide roller S, T section : Linearity adjustment.
- ◆ Tape wrinkle at tape guide flange : ACE head assembly coarse adjustment.

6-2-3 Reel Torque

1) The rotation of the capstan motor causes the holder clutch ass'y to rotate through the belt pulley.
2) The spring wrap PLAY/REV of holder clutch ass'y drives the disk reel S, T through gear idler by rotation of gear center ass'y.
3) Brake is operated by slider cam at FF/REW mode.
4) Transportation of accurate driving force is done by gears. (Gear Center Ass'y)

Note : If the spec. does not meet the followings specifications, replace the holder clutch ass'y and then recheck.

<Table 6-2>

MODE	TORQUE g/cm	GAUGE
PB	42 ± 11	Cassette Torquemeter
RPS	145 ± 30	Cassette Torquemeter

7. Circuit Operating Descriptions

7-1 Power

7-1-1 About S.M.P.S

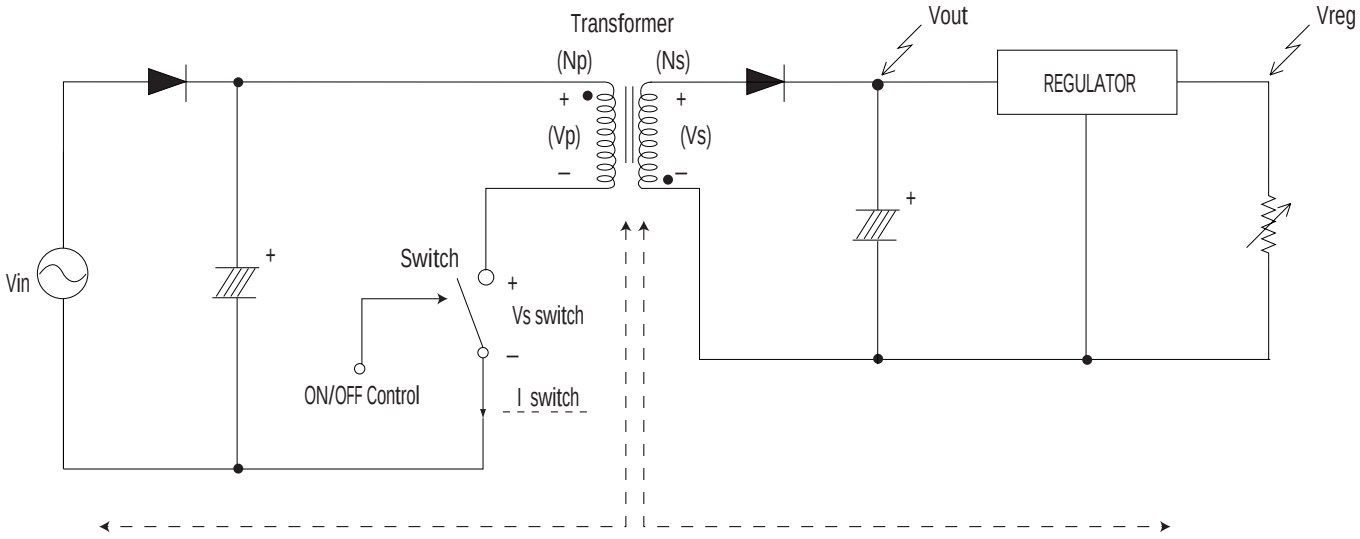

Fig. 7-1

◆Terms

1) 1st : Common power input to 1st winding.
2) 2nd : Circuit followings output winding of transformer.
3) f (Frequency) : Switching frequency (T : Switching cycle)
4) Duty : (Ton / T) x 100

7-1-2 Circuit description Control

(a) AC Power Rectification/Smoothing Terminal
1) BD01 : Convert AC power to DC (Wave rectification).
2) CIS01 : Smooth the voltage converted to DC.
3) L1S02, C1S04, C1S05 : Noise removal at power input / output.
4) R1S04 : Rush current limit resistance at the momemt of power cord insertion.
· Without R1S04, the bridge diode might be damaged as the rush current increases.
(b) SNUBBER Circuit : R1S02, R1S03, C1S08, C1S07, D1S05

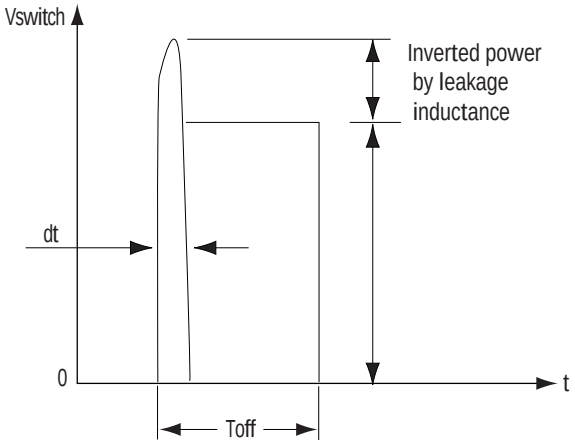

Fig. 7-2

1) Prevent residual high voltage at the terminals of switch during switch off/Suppress noise.
High inverted power occurs at switch off, because of the 1st winding of transformer :
(V=-L1 xdi/dt. L1 : Leakage Induction)
A very high residual voltage exist on both terminals of Q1S01 because dt is a very short.

2) SNUBBER circuit protects Q1S01 from damage through leakage voltage suppression by RC, (Charges the leakage voltage to D1S05 and C1S08 and discharges to R1S02, R1S03).

3) C1S38 : For noise removal

(c) IC1S01 Vcc circuit

1) R1S05, R1S07, R1S08 : IC1S01 driving resistance (IC1S011 works through driving resistance at power cord in)

2) IS1S01 Vcc : R1S06, D1S07, C1S09

① Use the output of transformer as Vcc,because the current starts to flow into transformer while IC1S01 is active

② Rectify to D1S07 and smooth to C1S09.

③ Use the output of transformer as IC1S01 Vcc : The loads are different before and after IC1S01 driving. (Vcc of IC1S01 decreases below OFF voltage , using only the resistance dut to lode increase after IC1S01 driving.)

(d) Feedback Control Circuit

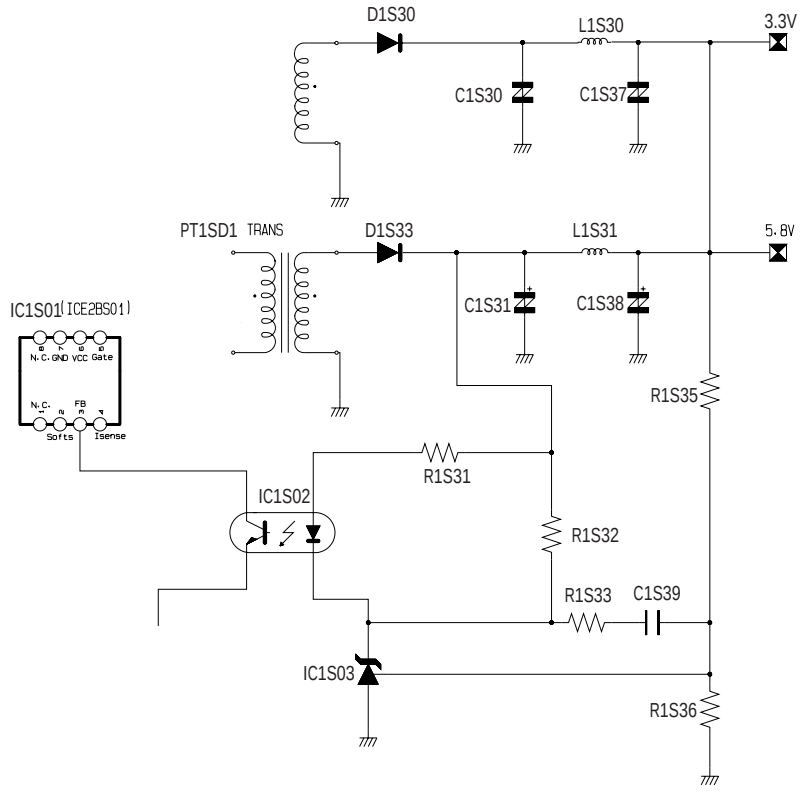

Fig. 7-3

1) F/B terminal of IC1S01 determines output duty cyle.
2) C-E (Collector-Emitter) of IC1S01 and F/B potential of IC1S01 are same.

7-2-1 DIC1 Processor Internal Architecture Diagram

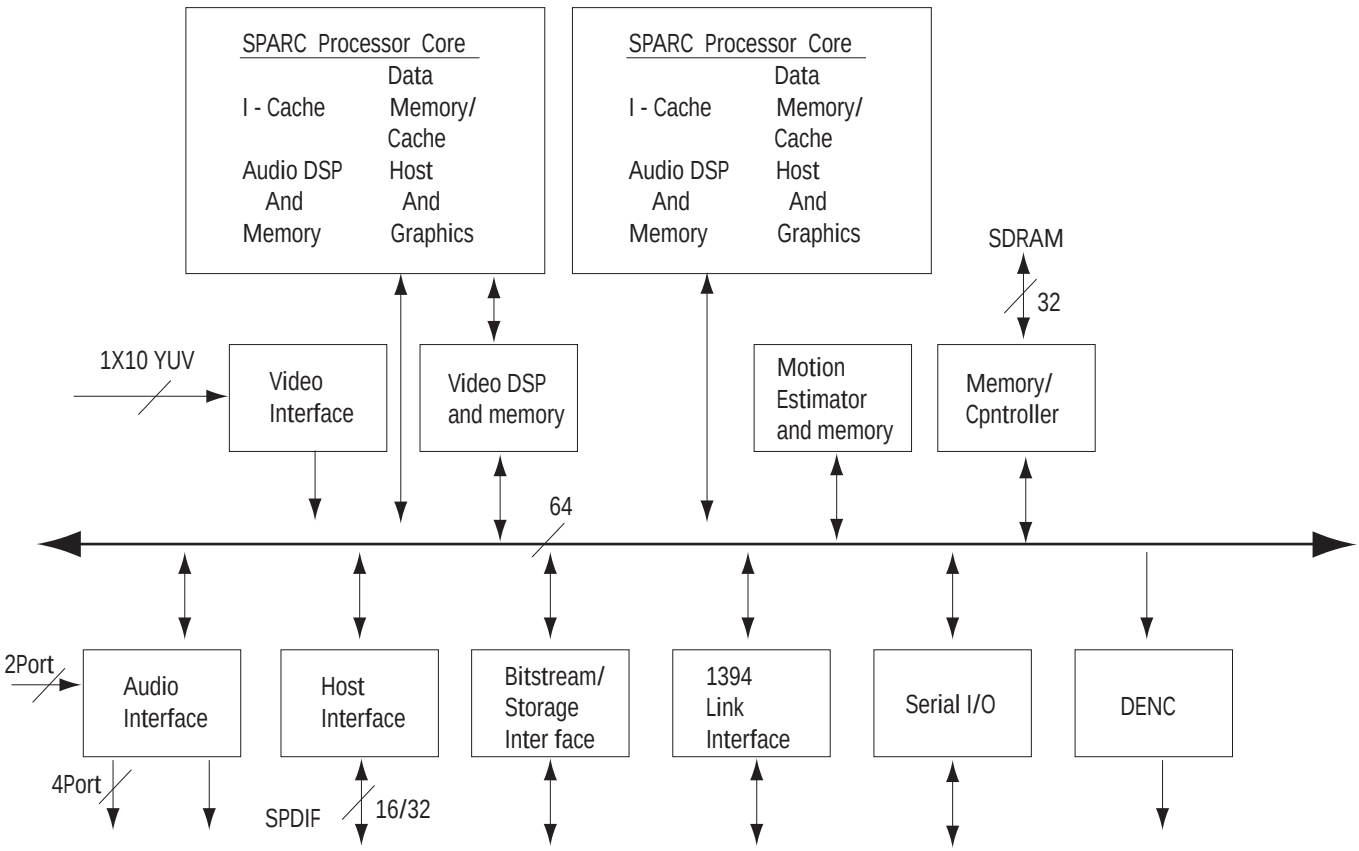

Fig. 7-6

7-2-2 A/V Processor (DIC1) Functional description

1) SPARC Processors

Two 32-bit SPARC processors, one dedicated to video processing and the other assigned general system tasks and audio processing, perform three classes of functions: system processing, audio processing, and high-level control flow and decision-making tasks for video processing. Optionally, they can also perform 2D graphics and host functions.

The DMN8602 also support multiple video inputs, windowed video ad graphics with arbitrarily relocatable and resizable windows, PIP (Picture-in-Picture), letterbox, and side-by-side display of SD sources.

2) Host Interface

The host communication functions include initializing the DMN-8602 device, downloading software to the local SDRAM, sending commands, monitoring status, and downloading graphics data such as OSD bitmap.

3) Bitstream / Storage interface

◆ ATAPI Controller

ATAPI is an asynchronous, 120ns, 16-bit word interface commonly used to connect devices such as hard disks, CD / DVD ROMs, and DVD RAMs. All operations are initiated by reading / writing a set of ATAPI device registers through programmed input / output(PIO) data transfer. ATAPI has DMA commands for transferring long data. The ATAPI register address is defined by the output pins CS0, CS1, DA[2:0].

◆ The IEEE1394 interface can receive MPEG-2 transport stream or DV stream data contained in isochronous packets (IPs). The DMN-8602 device filters the packets by matching channel IDs. In the case of MPEG-2 transport streams, the DMN-8602 device performs descrambling on the data that is scrambled with 5C encryption. Software is responsible for transport section processing and demultiplexing.

4) Video Interface

◆ Video Input channel

The video input channel captures ITU-R BT.656-compliant 10-bit digital YUV component video stream from Video decoder chip(TIC1)

◆ Video Digital Encoder (DENC)

The NTSC / PAL digital video encoder (DENC) module converts a digital video data stream into NTSC or PAL composite or component video output.

The DMN-8602 DENC output can be in one of the following formats:

- Baseband composite NTSC (M) or PAL (B,D,G,H,I) analog video.
- Separate analog luma(Y) and chroma(C) output to support S-Video.
- Separate analog component video RGB or SMPTE YPbPr output.

5) Audio Interface

The serial audio input port receives uncompressed 16- to 24-bit serial digital audio data from external audio ADC(AIC9). An internally generated clock provides bit serial clocking of the data coming from external ADC

The serial audio output port sends uncompressed 16- to 24-bit serial digital audio data to external audio DAC(AIC1). An internally generated clock provides bit serial clocking of the data coming from external ADC

6) Serial I / O interface

◆ SPI interface

The SPI(Serial Peripheral Interface) port provides a bus for a serial interface with front panel micom(FIC1)

◆ IDC interface

The IDC bus is a simple, two-wire, bidirectional communication bus. The two signals, clock and data, are com mon to every device connected to the bus.

In this system, IDC bus is connected to EEPROM(DIC8) and Video Decoder(TIC1)

7-3 SERVO (DVP Multi Drive)

1) Pick-Up
Data in the disc is processed from the optical pick-up unit (OPU). OPU includes the Elantec chip (EL6912c) which is a highly integrated laser diode driver designed to support multi-standard writable optical drives. This chip also has an IV amplifier with concurrent read and write sampling. The architecture allows reprogramming of the timers to support different media DVD or CD standards, and different speed.

2) A-Chip
A chip is RF processor. This module performs RF signal processing which includes RFIP, RFIN, AGC, RF equal izer. This processor is able to detect tracking error, focus error and various signals such as CE, PE, SBAD, DEFECT, BCA, MIRROR, Wobble, TZC, RC, and RECD.

3) C-Chip
C-Chip is composed of DP1, PRML and WS.
First, the Data processor1 (DP1) performs EFM/EFM+ Demodulation and data is stored in the buffer memory in data processor2 (DP2). DVD data in this buffer is transferred to CSS/ATAPI through error-correction code
(ECC), descramble process and error detection code (EDC).
Second, WS performs the following processes.
①Delay compensation using Shift register
②Sample/Hold pulse generation
③I/V Gain Control
④Providing clock for RF chip
⑤OPC Control signal generation
Lastly, PRML completes the adaptive EQ/VD and Digital PLL.

4) D-Chip
D-Chip consists of Servo DSP, DP2 and 1Mbit memory. Servo DSP is dealing with controlling the servo-mecha nism in DVD recorder. Servo-DSP has the following features.
①Bulit-in 10Bit ADC(8ch), DAC(3ch) and PWM(7ch)
②Step Motor Control Logic: Macro/Micro Step
③Track Counter: long distance velocity control direct seek
④Shock/Defect detection
⑤Header (DVD-RAM)/Land Pre-Pit (DVD-R/RW) Detection
⑥Several Servo Monitor Signal Detection
⑦RF IC Interface
⑧ Micom Interface
⑨Digital Servo Control of focus, tracking, sled and seek
⑩Disc Auto-Detection
⑪Automatic Adjustment of the offset, balance and gain of Focus and Tracking Signal
⑫Direct Seek with Velocity Control
⑬Step Motor Control: Macro Seek
⑭De-Track and Lens Shift Detection and Compensation
⑮Center Error Control
⑯DVD Layer Jump
⑰Tilt Detect and Compensation
DP2 performs High Speed ECC and CD DA Decoder.

5) ATAPI Controller

ATAPI (ATA Packet Interface) the standard interface protocol used to connect the CD / DVD Drive to IDE inter face. Data from the front-end is processed to back-end through this ATAPI protocol. Sanyo chip (LC98600CT-XB0) is utilized for ATAPI interface. LC98600CT-XB0 has the following features.

①ECC and EDC correction / addition for CD-ROM data
②Subcode decoding / encoding
③Spindle servo control
④CLV / CAV servo control using ATIP data
⑤ATIP decoding and CRC check functions
⑥ Providing random EFM output for PCA use
⑦High-accuracy write strategy signal output enabled (CD-R 52x)
⑧Buffer RAM can be accessed by the microcontroller through the LC98600CT-XB0
⑨Built-in ATA-PI(IDE) interface (supports Ultra DMA modes 0,1, and 2)
⑩52x decoding speed / 52x encoding speed supported with 33.8688Mhz
⑪Maximum transfer speed PIO mode: 16.6 MB / s (with IORDY), Ultra-DMA: 66MB / s (with DMARQ)
⑫User can freely set the CD main channel, C2 flag, and subcode areas in buffer RAM
⑬Built-in batch transfer function for transferring (CD main channel, C2 flag, etc., in a single operation)
⑭Built-in multi-transfer function (allows multiple blocks to be sent to the host automatically in a single operation)

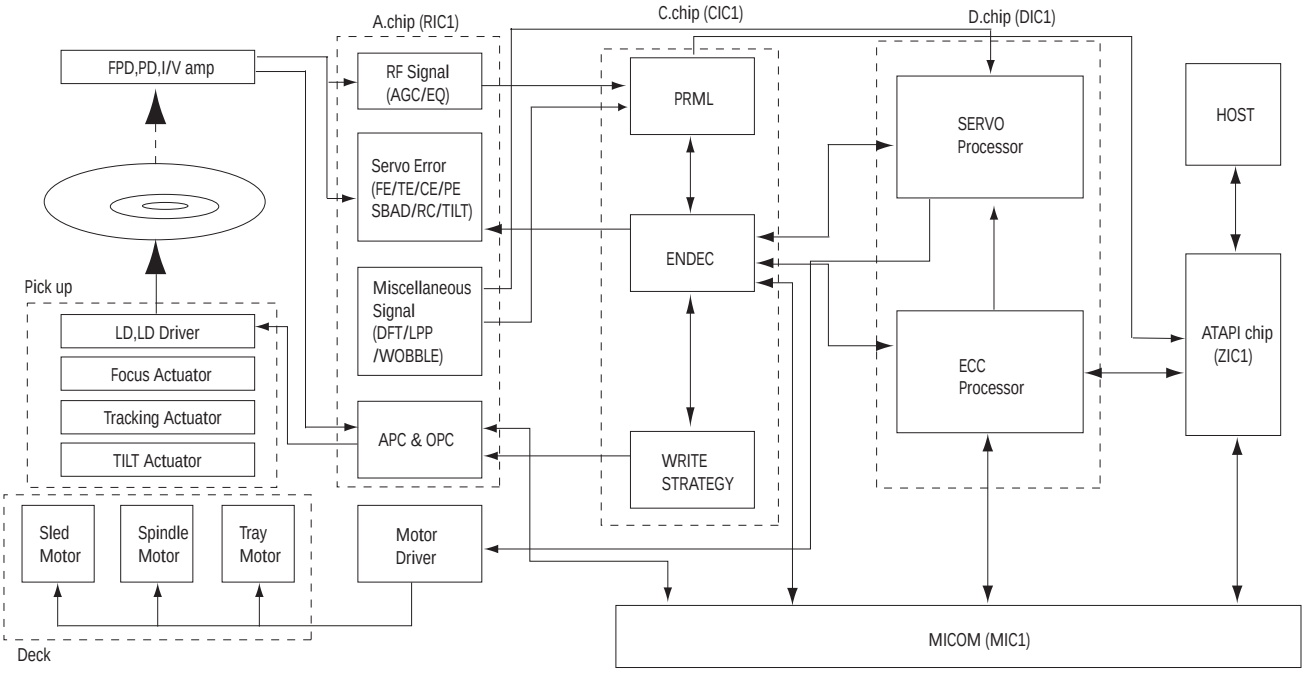

Fig. 7-7

7-4 Video Input

7-4-1 Video Input Outline

DVD-R100 is the two Line Video input. Line 1 Video input is CVBS1 at the Rear Panel. Line 2 Video input is CVBS2 & S-Video2 at the Front Panel.
The analog Video signal select Line 1 or Line 2 by the IC601 (VCR Micom).
TIC1 (Video Decoder) diverges from the 14.318185MHz crystal, then generates ITU-R656 (10bits) and 27MHz clock.
TIC1 (Video Decoder) does closed caption, copy guard detect processing and A/D conversion of 11bit analog Video signal converted into Digital Video signal (ITU-R656 Format) is outputted via DIC1 (MPEG2 Decoder & Encoder with video Encoder) of digital part.

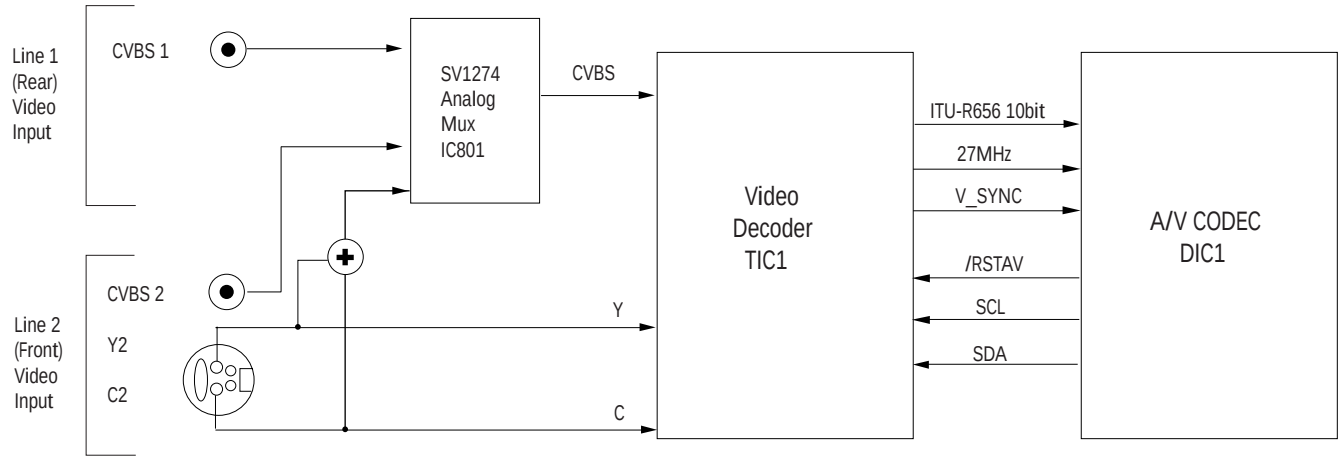

Fig. 7-8

7-4-2 Analog Mux (SV1274)

IC801 is Analog Mux.
As Pin 64, 63 of the IC801 is controlled by the VCR Micom, IC801 select Line1 of CVBS[Pin4] and Line2 of CVBS[Pin 6] andTIC1 select Line2 of S-Video[Pin9. Pin18].
◆The analog Video Signal of IC801 output is selected by the FIC1 via TIC1(Video Decoder : TVP5146) of analog Video input parts.

7-4-3 NTSC/PAL Video Decoder (TVP5146 : Video Decoder)

The TIC1 (Video Decoder : TVP5146) device is a high quality, single-chip digital video decoder that digitizes and decodes all popular baseband analog video formats into digital component video. The TIC1 (Video Decoder : TVP5146) supports the analog-to-digital (A / D) conversion of component RGB and YPbPr signals, as well as the A / D conversion and decoding of NTSC, PAL and SECAM composite and S-video into component YCbCr.
This TIC1 (Video Decoder : TVP5146) includes four 10-bit 30-MSPS A / D converters. and A / D conversion of 10bit analog Video signal converted into Digital Video signal (ITU-R656 Format) is outputted via
DIC1 (MPEG2 Decoder & Encoder with video Encoder) of digital part.
The following output formats supply 10-bit 4:2:2 YCbCr to the DIC1 (MPEG2 Decoder & Encoder with video Encoder) of digital part.
On CVBS and S-video inputs, the user can control video characteristics such as contrast, Brightness, saturation, and hue via an I2C DIC1 port [PIN V17, V18] interface.
The TVP5146 decoder includes methods for advanced vertical blanking interval (VBI) data retrieval. The VBI data processor (VDP) slices, parses, and performs error checking on teletext, closed caption (CC), Copy Guard Detect Processing and other VBI data.

7-5 Video Output

7-5-1 Outline

DIC1 (MPEG2 Decoder & Encoder with video Encoder) diverges from the 13.5MHz crystal, then generates VSYNC and HSYNC.
DIC1 (MPEG2 Decoder & Encoder with video Encoder) does RGB encoding, copy guard processing and D/A conversion of 10bit Video signal converted into analog signal is outputted via amplifer of analog part.

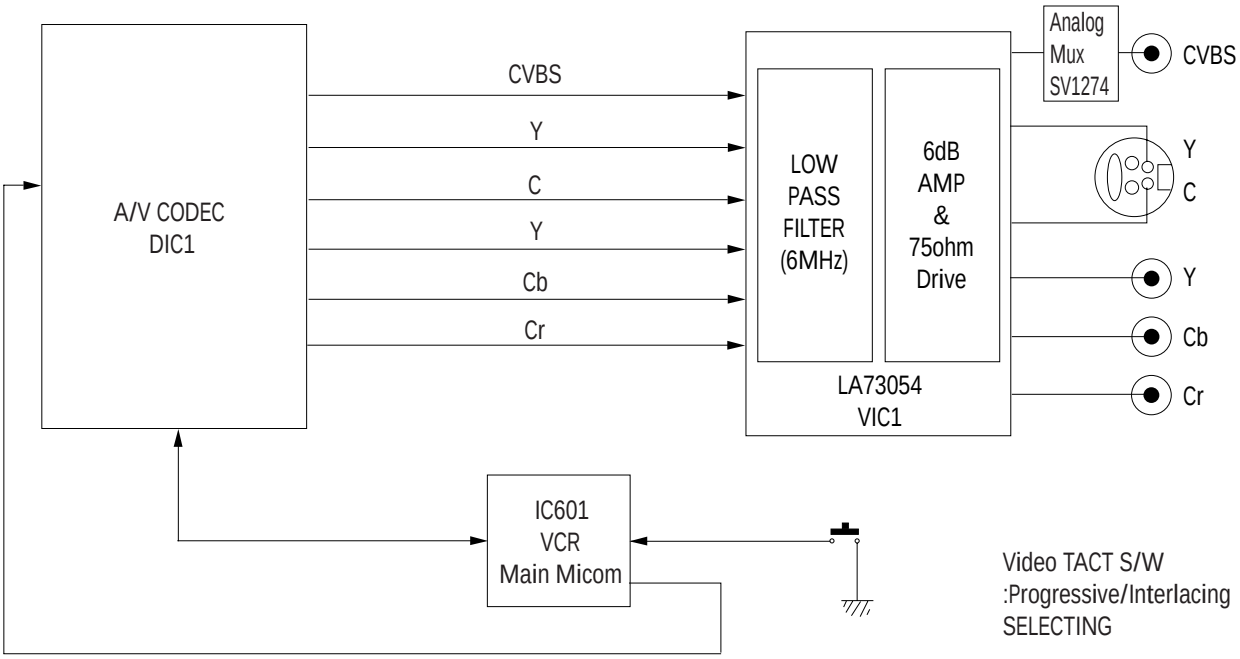

Fig. 7-9

7-5-2 NTSC/PAL Digital

DIC1 inputted from pin E1 with 13.5MHz generates HSYNC and VSYNC which are based on video signal. DIC1 is synchronous signals with decoded video signal.
The above signals, which are CVBS (Composite Video Burst Synchronized), Y(S_Video), C(S_Video), Y(Component)/G(Green), Cr(component)/R(Red), Cb(component)/B(Blue), are selectively outputted 480i (interlaced Video Output), 480P(progressive Video Output) by the Front switch.
DIC1 adopts 10bit D/A converter.
DIC1 perform video en-coding as well as copy protection.

7-5-3 Amplifier (VIC1: LA73054)

VIC1 is 6dB amplifier.
Based on CVBS signal, the final output level must be 2Vpp without 75ohm terminal resitance.
Because the level of video encoder output is only 1.1Vpp, the level is adjusted with the special amplifier.
When mute of pin 5 is high active, if the pin is floating and connecte to power, the output signal is never ouputted.
CVBS, Y, C, R, Pb(B), Pr(R) outputted from video encoder are inputted to VIC1 (Pin 2, 8, 6, 16, 14).
The signal to which gain is adjusted by amplifier is outputted from jack via 75ohm Resistance (VR11~VR16).

7-6 Audio

7-6-1 Input Block

DVD-VR300 has two stereo line input terminals. and internal TV-audio from RF Tuner Block. These three Analog audio signal source are converted to digital data by Input Block.
Input Block has a Multiplexer (IC801), Input Filter (AIC81, AIC82), and A / D converter (AIC9).
IC203 change it's output by selection control signal from FIC1 (Front Micom).
The output signal of IC801 are filtered by OP-Amp (AIC81, AIC82).
AIC81 (L-ch) have two op-amp in each.

7-6-2 Output Block

DVD-VR300 has two stereo analog line out terminal, and two digital output terminal.
Decoded signal by DIC1 is inputted to AIC1 (D / A Converter), then filtered and amplified by AIC4 (OP-Amp).
And the digital audio signal (IEC-958) is drived by AIC3 inverter and ouputted in Optical / Coaxial (S / PDIF) terminal.

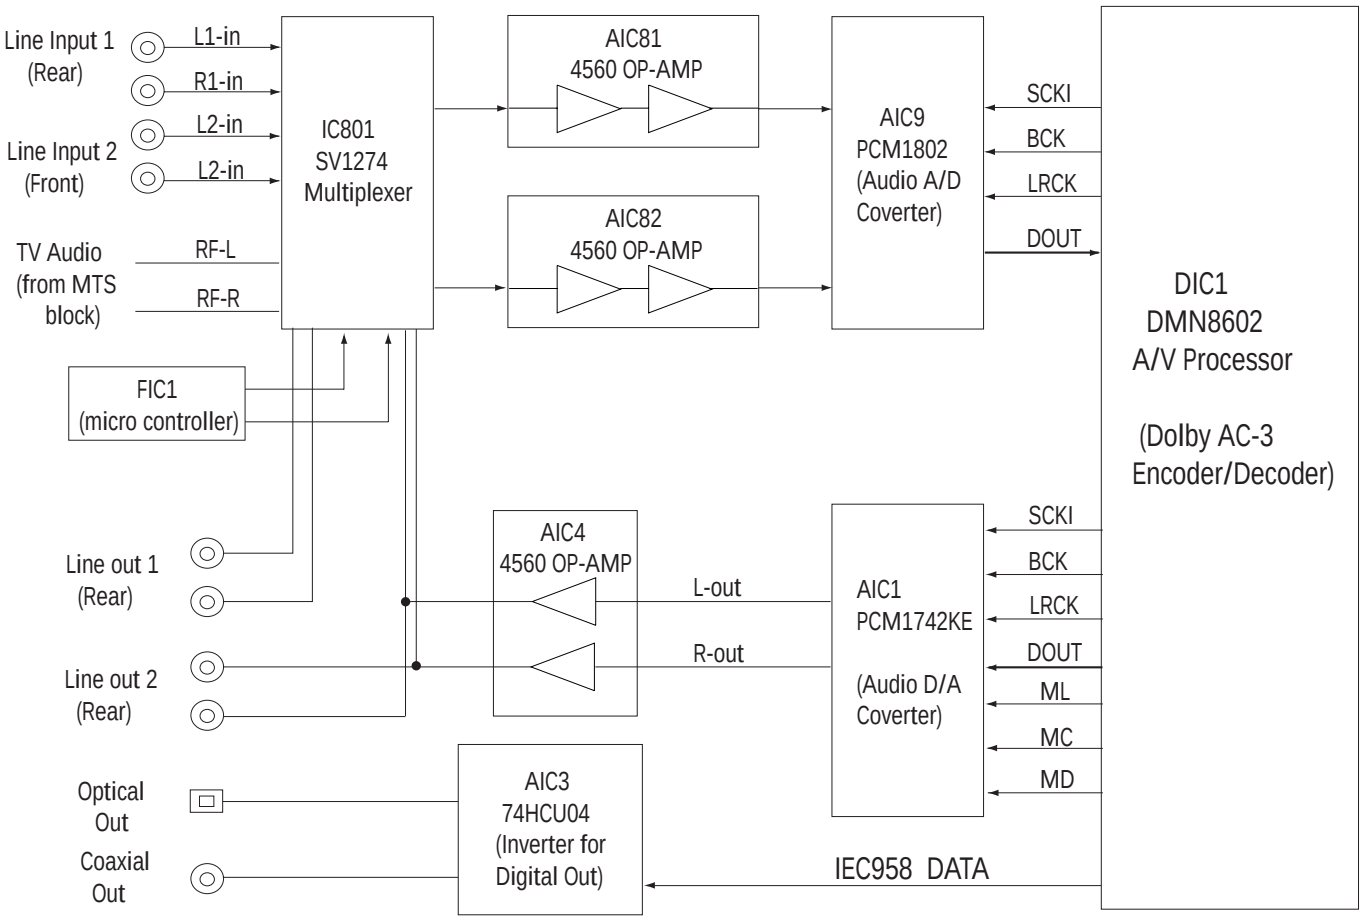

Fig. 7-10

7-7 VCR System Control

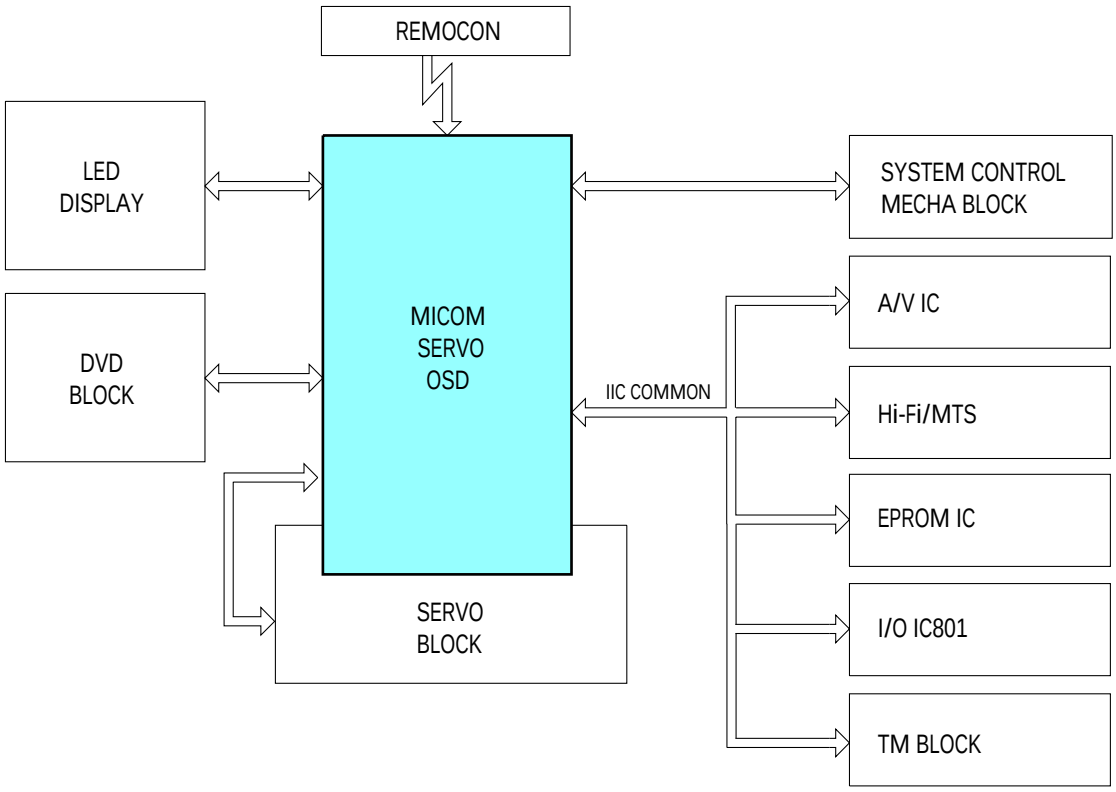

Fig. 7-11 Micom Block Diagram

(1) Outline

The system control circuit inputs the commands given by the operator to set the mechanism and circuit to the commanded mode. The circuit also inputs the detected output from the tape and mechanism protection sensor and protects the VCR and tape against abnormal operation.
Fig. 7-11 is a simplified system control block diagram.
The system control is performed by 4 control sections. (System and timer control, Servo control, F/S Tuner, On Screen Display).

Fig. 7-12 IC601 Block Diagram

(2) Mechanism/Circuit Control

When the u-COM inputs operator's commands via the key input or remote input, the mechanism and circuits are set to the command mode. This function controls mechanism / servo section and audio / video processing section.

1) Cassette Loading Control

Controls loading and ejection of a cassette and determines the mechanism operation mode; tape loading / unloading, action / release of various breaks, tension, take up mechanism etc.

2) Tape Protection Sensor Monitoring

Detects abnormal operation in tape using the supply and take up end sensor, reel sensor and SW 30Hz pulse for drum rotation.

3) Capstan Motor Control

Determines the tape speed and direction, fast forwards and rewinds the tape etc.

4) Tape Counter Control

Counts the control pulses on the control track, picked up by the control head and shows it on the digital multidisplay.

5) Servo Control

Determines the operation mode of the servo circuit. Control the speed of drum and capstan motor, and then Control the phase of drum and capstan motor.

6) Record Safety Tap Detection

Detects the safety tab on the rear of a cassette to prevent a prerecorded program from being erased.

7) Loading/Unloading control

Controls a series of loading / unloading operation after the u-COM judges the operation mode and sets the mechanism to suitable mode. Fig. 7-13 show correlation between u-COM and peripheral components during the loading / unloading operation.

The mechanism state switch (PROG. SW) detects the mechanism position. When the driving gear is turned by the loading motor, the switch driving slider traces the groove, and this switch stops at the correct position corresponding to each mode. In other words, the u-COM judges the present mechanism state from the PROG SW after receiving the mode data, then it outputs the loading motor and capstan motor control signals. This continues until the PROG SW reaches the correct state by the u-COM.

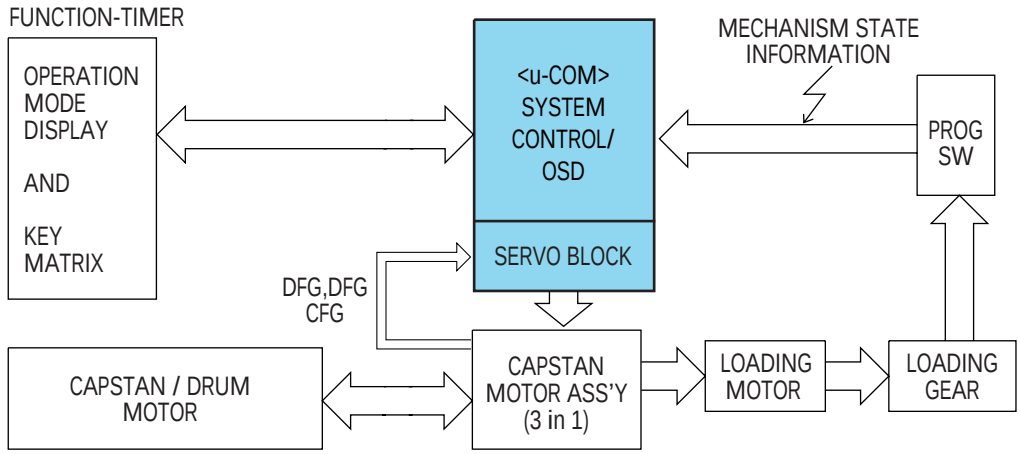

Fig. 7-13 The Relationship Between u-COM, Capstan, Cylinder and Loading Motor

(3) Program SW Input

The mechanism state for each mode is shown in table 1 below. The mechanism state is classified into position, and correlation between the switch position and mechanism state is shown in table 1, also.

Table 1 : Prog. SW State in Each Mode

POSION	CAM S/W			START SEN	ACTION MODE
	A	B	C		
STANBY	0	0	0	0	Eject
POWER OFF	0	0	0	1	Unload POWER OFF
LOADING START	0	0	0	1	(Tape loading start point)
LOADING END	1	0 1	1	1	(Tape loading end point)
REV	1	1	0	X	Reverse picture search, reverse SLOW
PLAY	0	1	0	X	Play, Rec, F-PS, Still, SLOW, F-ADV
STOP 1	0	0	1	1	Stop (Play position 5 Min. over)
STOP 2	0	0	1	X	(MAIN Break ON MODE)
FF/REW 1	1	0	0	X	High speed Rew, Low speed FF
FF/REW 2	0	1	1	X	High speed FF, Low speed Rew

(4) Motor Control

In case of Scorpio-2 Deck, Loading Motor Drive IC lies in Capstan Motor, not like Scorpio-1 Deck.
In detail, Capstan Motor Drive IC is designed to drive Loading Motor + Capstan Motor + Cylinder Motor in one IC. (See Fig. 7-14)

Table 2 : Motor Control Logic

CN604-PIN10	MOTOR
0 ~ 1V	**Reverse**
2 ~ 3V	**Stop**
4 ~ 5V	**Forward**

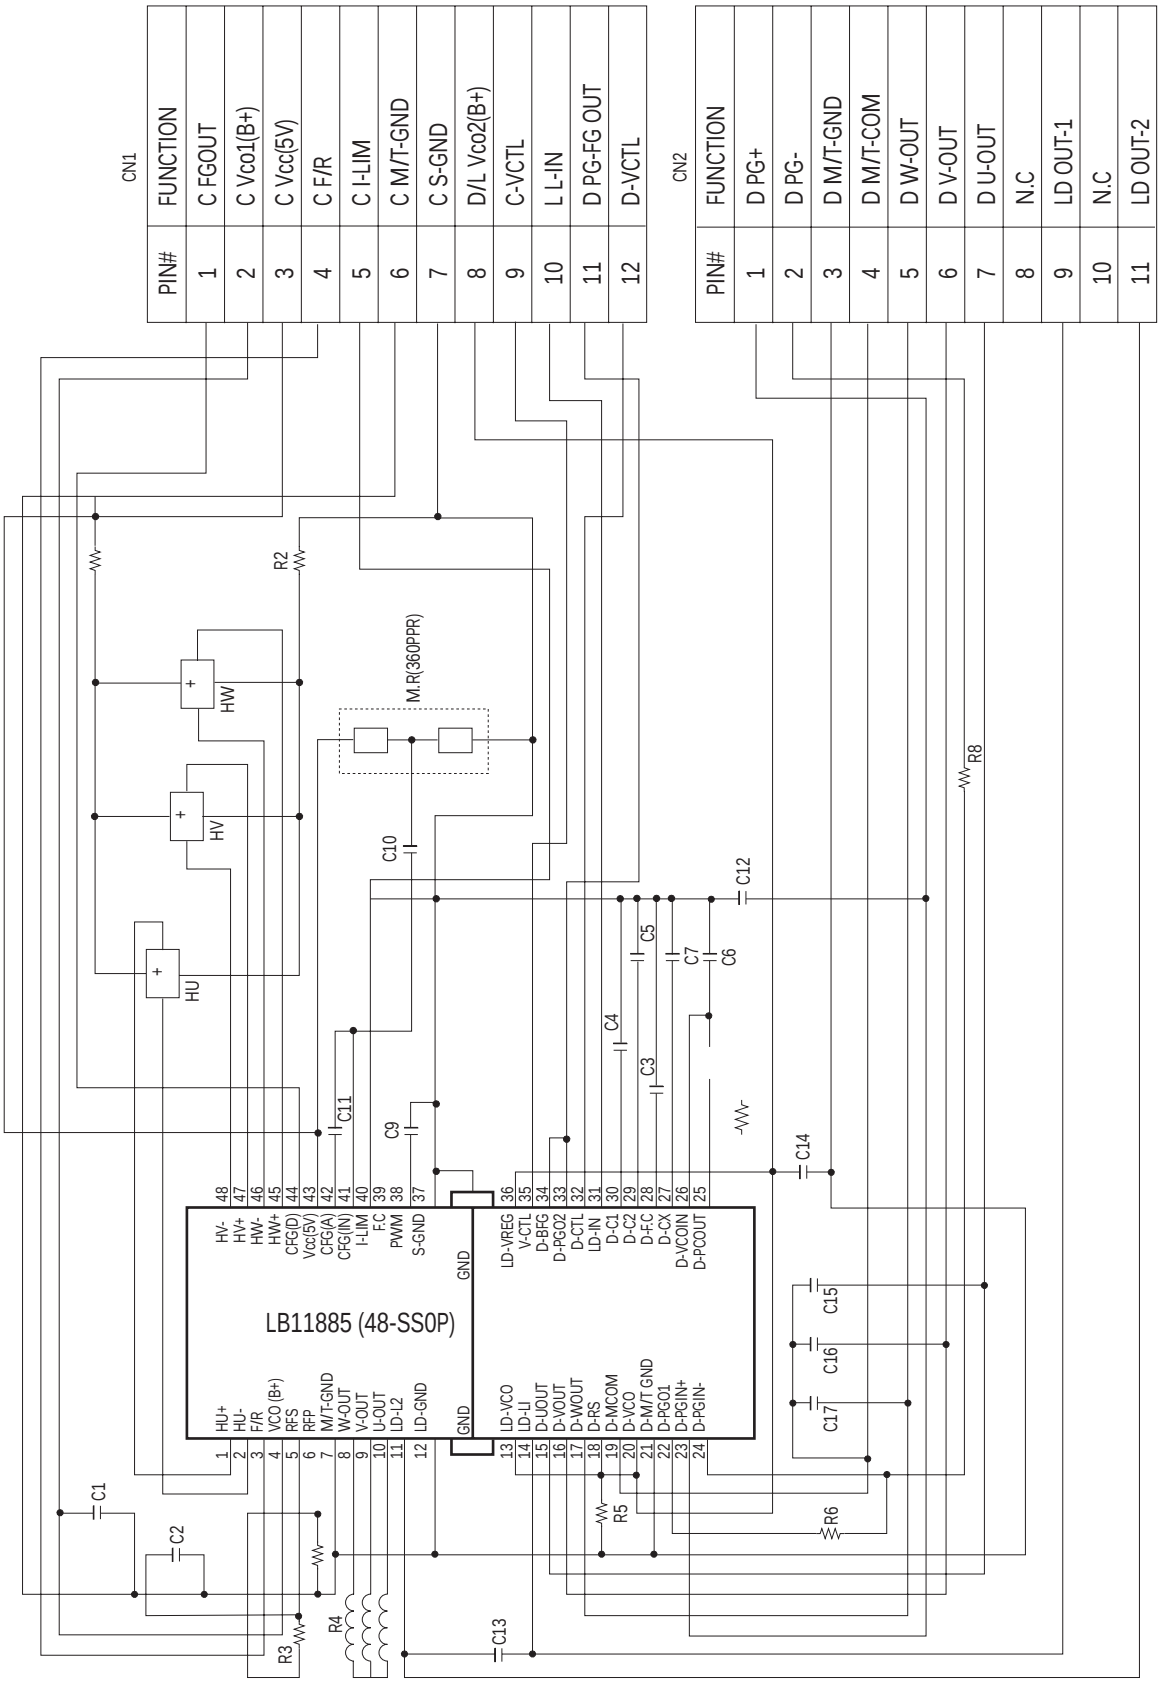

Fig. 7-14 Loading Motor + Capstan Motor + Cylinder Motor Block Diagram

(5) Stop Mode

The VCR enters the stop mode when the stop button is pressed during playback, record, rewind and fast forward mode. When trouble is detected, the VCR enters the stop mode to protect the tape and mechanism or when the tape reaches the end, etc.

- State Input ;
  Power switch on position.
  Stop button operation in all mode, except for timer recording and XPR.

(6) Play Mode

- State input ; Play button operated in stop, fast forward, rewind, forward search, reverse search, still mode, etc.,
- Indication output ;
  "PLAY" lights in LED Module.
- Output at ;
  IC601 Pin 46 (CAP F/R) : H

(7) Trick Play Mode

Trick play modes are classified into forward search, reverse search, still, slow and frame advance.
Audio signal is muted by pin 32 of IC601 (A.MUTE). V-lock is controlled by pin 24 of IC601.

(8) Forward Search Mode

7 Times play speed search in SP and SLP, 21 times play speed search in SLP.

- State input ; Press the fast forward button on the VCR front panel or the remote control in play or still mode.
- Indication output ; "FPS " display in LED Module during 3 seconds.
- Output at ;
  IC601 Pin 46 (CAP F/R) : H
  IC601 Pin 32 (A.MUTE) : H

(9) Reverse Search Mode

7 times play speed reverse search in SP, 21 times play speed reverse search in SLP.

- State input ;
  Press the rewind button on the VCR front panel or on the remote control in play or still mode.
- Indication output ;
  "RPS" display in LED Module during 3 seconds.
- Output ;
  IC601 Pin 46 (CAP F/R) : L
  IC601 Pin 32 (A.MUTE) : H

(10) Slow Mode

- State input ; Press "⏯" button and then press "⏩" button on the remote control.
  The slow speed can be changed when "⏩" or "⏪" button is pressed.
- Indication output ; "SLOW" lights in LED Module.
- Output at ;
  IC601 Pin 46 (CAP F/R) : H
  IC601 Pin 32 (A.MUTE) : H

(11) Play/StiII Mode

The same track is traced by the video heads.

- State input ; Press " ⏯ " button in play modes.
- Indication output ; "STILL" display in LED Module.
- Output at ;
  IC601 Pin 46 (CAP F/R) : H
  IC601 Pin 32 (A.MUTE) : H

(12) Record Mode

Must use a cassette with the safety tab.
Index signal is recorded on the control track of the tape at the start of recording.

- State input ;
  Press the record button during stop mode and record pause mode or at the preset time reached in the timer record mode. Press the REC button in stop mode.
- Indication output ;
  "REC" lights in LED Module in normal record mode, "0:30, 1:00, 1:30, 2:00, 3;00 or 4:00" display in timer XPR modes.
- Output at ;
  IC601 Pin 46 (CAP F/R) : H

(13) Record Pause Mode

The pinch roller is released from the capstan shaft in a moment.
The brake is applied to the take up reel to prevent tape slack during the record pause mode.

- State input ; Press " ⏸ " button in the record mode.

Note : Inoperative during recording and XPR mode.

- Indication output ; "PAUSE"display in LED Module.

(14) Fast Forward Mode

Tape fast forward operation using capstan motor.

- State input ; Press the rewind button in the stop or fast forward modes.
- Indication output ; "FF" lights in LED Module.
- Output at ;
  IC601 Pin 46 (CAP F/R) : H

(15) Rewind Mode

Tape rewind operation using the capstan motor.

- State input ; Press the rewind button in the stop or fast forward modes.
- Indication output ; "REW" lights in LED Module.
- Output at ;
  IC601 Pin 46 (CAP F/R) : L

(16) Rewind Shut-Off Mode

Tape rewind operation then power off mode.

- State input ; Press the power button in the rewind mode.

(17) Trouble Detection

The trouble detection circuits are provided to protect the from damage (Fig. 7-15). The reel lock sensor detects incorrect rotation of supply and take up reel. The reel lock sensor consists of the disk and photo sensor installed at the bottom of the reel disk. the disk has 6 or 8 shielder parts and the photo sensor consists of the LED and photo transistor assembly. When the light is shielded by the the shielder or enters the photo transistor, the output is obtained from the photo sensor. IC601 measures the period of the pulse. When it is 4 seconds or more during record / play, the VCR enters the reel emergency mode.
The VCR maintains the unload-power-on state in the reel emergency.

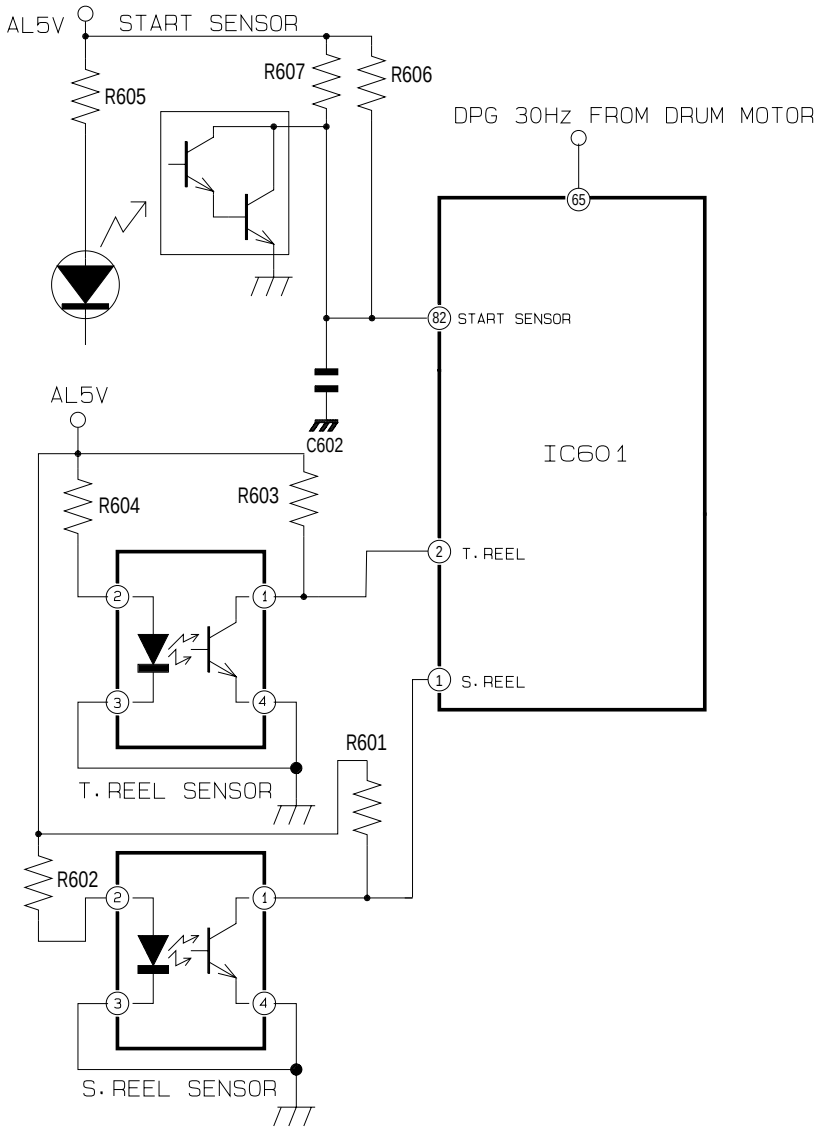

Fig. 7-15 Reel and Cylinder Lock T.END/S.END Sensor

(18) Cylinder Lock Sensor

If the frequency of D-FG is less than 230Hz or more than 430Hz during 500msec, and such stuation occurs 3 times contined, micom makes the VCR drum emergency.

(19) Tape End Sensor

When end sensor detects the transparent section at the end of tape, the VCR enters auto rewind mode, except during timer recording and OTR mode. The cassette LED emits light through the transparent section of tape to the photo transistors, which are installed at both ends of the cassette. When start sensor detects the start section of the tape during reverse search and rewind, the VCR automatically goes to stop mode.

(20) Tape Counter Control

Fig. 7-16 is a simplified diagram of the tape counter control circuit. The tape counter in the u-COM counts the control pulses derived from control head. The control signal on the control track of the tape is picked up by the control head and supplied to pins 74, 75 of IC601. The control pulse is amplified by the u-COM IC. The u-COM determines the tape direction so the counter counts up when the "CAP F/R"signal is Hi and the counter counts down when the "CAP F/R" signal is Low. By counting the control pulse, the counter data is supplied to the VF display. Counter displays the time and it is increased or decreased by one minute after counting 1800 control pulses. Counter mode is switched to clock mode when the display button is pushed or when the VCR goes to power off mode. When the Clear button is pressed, the counter is reset to "00 : 00".
The tape counter has a memory stop function.

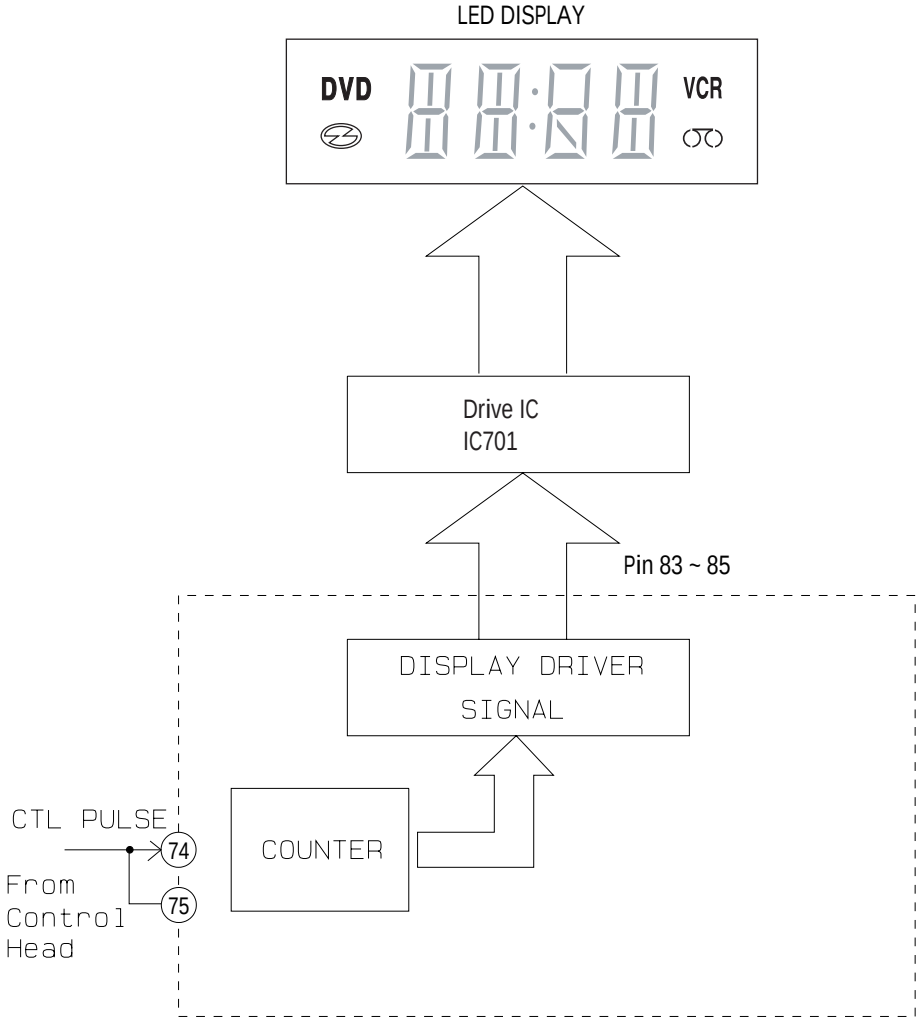

Fig. 7-16 Counter Display

(21) Timer/OTR Control

The timer can preset 12 programs in one month including daily and weekly programs.
Express recording lets the operator record up to 4 hours without programming the timer.

(22) Clock Display

The clock generator inside of the u-COM counts the oscillation signal of XT601 for the timer clock data.

(23) Power Failure Detection

u-COM goes to the power failure mode when the 88 port is lower than 4/5 of AD Vcc level.

(24) 4H'D Control

During trick play (still,slow,F-advance), it is necessary to control pre-amp,video circuit. the micom control pin 98 (C-ROTARY), pin 99 (HD-AMP) of the IC601 during PB period in Slow mode.
These port is applied to video IC to operate the trick play.

7-8 VCR Servo

(1) Outline

The servo system is divided into three loops. The cylinder servo controls the rotation of video heads, the capstan servo controls the tape speed, and the tension. In addition it's necessary to control cylinder motor, especially during trick play in 4H'D models. The tension servo maintains the tape tension constant: it keeps the compression strength of tape against the video heads at the optimum level so that a stable RF signal is produced during recording and playback. The tension servo operation is entirely mechanical. The cylinder servo loop controls the phase and speed of the cylinder motor. The speed is kept at a constant 1800 RPM and the phase determines the mechanical position relative to the vertical Sync signal. The capstan servo loop controls the phase and speed of the capstan motor so that the video head can trace the video track correctly. It keeps tape speed constant according to the mode (SP, SLP)during playback and recording.

Table 3 : Servo System Signal

MOTOR	SYSTEM	MODE	REFERENCE SIGNAL	COMPARISON SIGNAL
CYLINDER (VIDEO HEAD) (4H' D)	PHASE	REC	V-SYNC	SW 30Hz
		PB	REF30Hz	
	SPEED	COMMON	8MHz	CYLINDER FG(720Hz)
	SPEED& PHASE	TRICK PLAY (STILL. SLOW)	MICOM CONTROL CYLINDER SPEED TO MATCH H-SYNC SPEED	
CAPSTAN (4H' D)	PHASE	REC	DIVIDED CFG PULSE	REF 30Hz
		PB	CTL 30Hz	
	SPEED	COMMON	8MHz	CAPSTAN FG
	SPEED& PHASE	TRICK PLAY (STILL. SLOW)	MICOM CONTROL CAPSTAN DRIVE SIGNAL WITH CAP C.L	

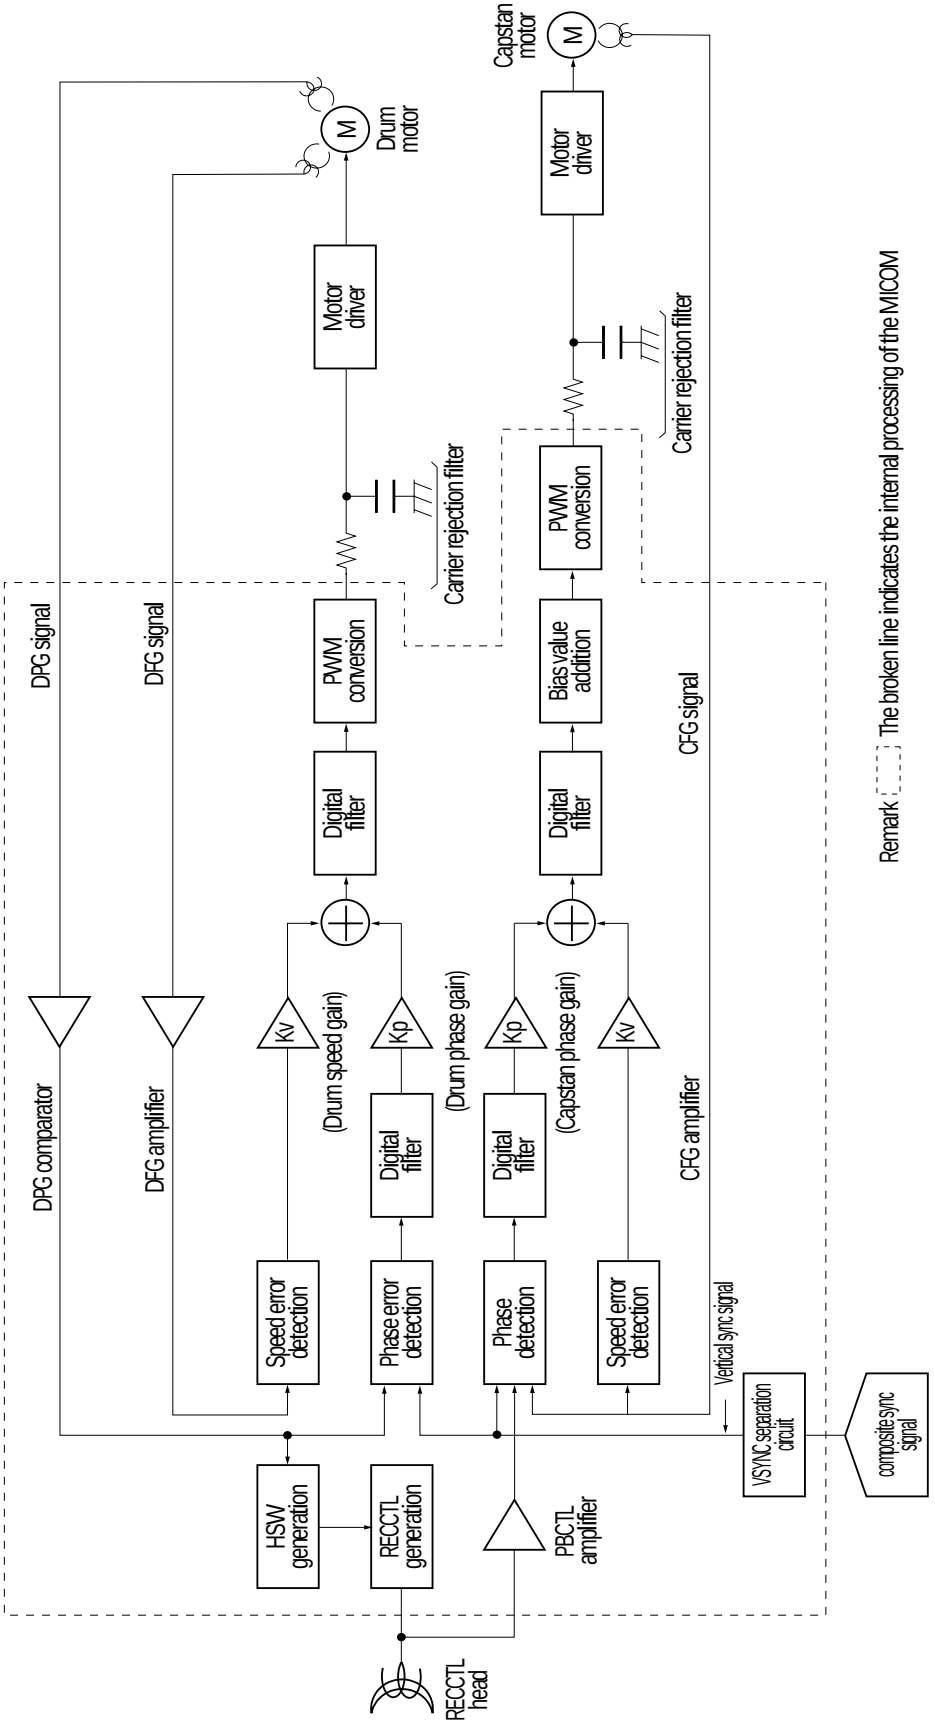

Fig. 7-17 Block Diagram

(2) Capstain Speed Error Detector

The capstan speed control operates so as to hold the capstan at a constant rotational speed, by measuring the period of the CFG signal. A digital counter detects the speed deviation from a preset value. The speed error data is added to phase error data in a digital filter. this filter controls a pulse-width modulate (PWM) output, which controls the rotational speed and phase the captain.
When the error is zero, the PWM circuit outputs a waveform with a 50% duty cycle.

The CFG input signal from the capstan motor is a square wave the CFG input signal is compared by a comparator and than sent to speed error detector as the CFG signal.

The speed error detector uses the system clock to measure the period of the CFG signal, and detects the deviation from a preset data value. The preset data is the value that would result from measuring the CFG signal period with the clock signal if the capstan motor were running at the correct speed.

The error detector operates by latching a counter value when it detects an edge of the CFG signal.
the latched counter provides 16 bits of speed error data for the digital filter to operate on.
The digital filter adds the speed error data to phase error data from the capstan phase control system,then sends the result to the pulse-width modulator as capstan error data.

(3) Capstain Phase Error Detector

The capstan phase error detector consists of a 16-bit counter, a capstan phase preset data register pair, a latch signal circuit driven by a feedback signal, and a captain phase error data register pair.

The capstan phase control in rec mode is executed by comparing HD S/W, which is synchronized with V-sync, with devided CFG signal. And than it does in playback mode by comparing HD S/W, which is synchronized with DFG and DPG, with PB CTL signal.

The latch signal for the phase error data in record mode is the devied CFG signal, which is devided from the CFG signal in the CFG frequency devider to a frequency of 30HZ.
In playback, the latch signal is the devied CFG signal obtained by frequency division from the rising edge of PB-CTL signal (playback control pulse signal).

The error data is a signed binary value centered on a phase error of zero (corresponding to the correct rotational phase). If the phase legs the correct phase ,the error is positive (+).
If the phase leads the correct phase, the error is negative (-).

(4) Drum Speed Error Detector

Drum speed control operates so as to hold the drum at a constant rotational speed, by measuring the period of the DFG signal. A digital counter detects the speed deviation from a preset value. The speed error data is added to phase error data in a digital filter. The filter controls a pulsewidth modulated (PWM) output,which controls the rotational speed and phase of the drum.

The DFG input signal from the drum motor is a square wave. The DFG input signal is compared by a comparator and than sent to the speed error detector as the DFG signal.

The speed error detector uses the system clock to measure the period of the DFG signal, and detects the deviation from a preset data value. The preset data is the value that would result from measuring the DFG signal period with the clock signal if the drum motor were running at the correct speed.

The error detector operates by latching a counter value when it detects an edge of the DFG signal. The latched count provides 16 bits of speed error data for the digital to operate on.
The digital filter adds the speed error data to phase error data from the drum phase control system, then sends the result to the pulse-width modulator as drum error data.

(5) Drum Phase Error Detector

Drum phase control must start operating after the drum motor is brought to the correct rotational speed by the speed control system . Drum speed control works as follows in record and playback.

- Record : Phase is controlled so that the vertical blanking intervals of the recorded video signal will line up along the edge of the tape.

- Playback : Phase is controlled so as to trace the recorded tracks accurately.

A digital counter detects the phase deviation from a preset value. The phase error data is added to speed error data in a digital filter. this filter controls a pulse-width modulated (PWM) output, which controls the rotation phase and speed of the drum.When the error is zero, the PWM circuit outputs a waveform with a 50% duty cycle.

The phase counter error detector compares the phase of the DPG pulse (tach pulse),which contains video head phase information, with a reference signal. In the actual circuit , the comparison is carried out by comparing the head-switching (HSW) signal,which is delayed by a counter that is reseted by DPG, with a reference signal. The reference signal is the REF 30Hz signal,which differs between record and playback as follows.

- Record : V sync signal extracted from the video signal to be recorded (frame rate signal, actually 1/2V sync).

- Playback : 30Hz signal divided from the system clock.

7-9 VCR Video

(1) Luminance Signal Recording System

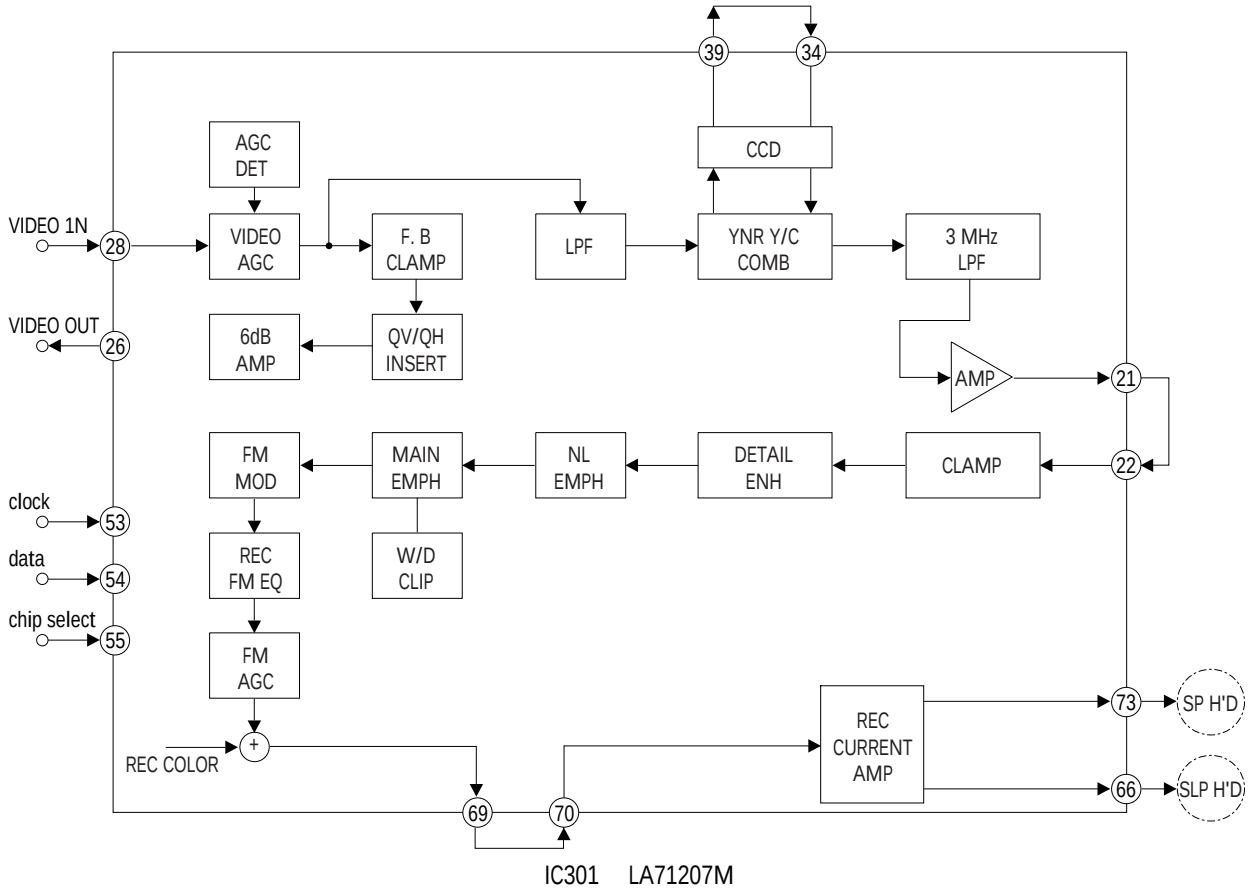

Fig. 7-18 Luminance Record Process

1) Outline

Fig. 7-18 shows the video signal recording system.

The selected video input signal goes to pin 28 of Luma/Chroma processor IC (IC301). And then it enters VIDEO AGC circuit. The gain of AGC circuit is controlled by AGC detector so that the output is constant (approx. 2Vp-p). The output signal of AGC is clamped by the FBC(Feed Back Clamp) circuit. This signal appears at pin 26, after being amplified at the internal video amp and driver.

The output signal from the clamp circuit enter the detail enhancer circuit. In the detail enhancer circuit, the low level high frequency video signal is emphasized to improve the original signals frequency characteristics.

onlinear emphasis circuit is employed to improve S/N and frequency response characteristics together with the following main emphasis. Noise effects the FM wave at a higher frequency, so the S/N can be improved by emphasizing the higher frequency before recording and by suppressing the play signal during demodulation.

The difference of non linear emphasis from main emphasis is that the emphasis characteristics change is depending on the input level. The gain of the emphasis circuit is inversely proportional to the level of the high frequency component of the signal. That is, if the high frequency portion of the signal is low the main emphasis circuit will amplify the signal.

2) Main Emphasis Circuit

The dynamically emphasized luminance signal is now supplied to the main emphasis circuit where all the high frequency components of the signal are boosted more than the low frequency components. The boosting action is required for the high frequency components because in the FM recording method, the noise of the playback signal increases in proportion to the modulated signal frequency or low level signal. By using the nonlinear emphasis and main emphasis system, the total S/N ratio is increased. The output of the main emphasis circuit is then supplied to the white and dark clip circuit.

3) White and Dark Clip Circuit

After emphasis is performed, large overshoots and undershoots in the luminance signal are limited to a specified level. This is done to avoid FM over modulation. The output of the main emphasis circuit is then supplied to the FM modulator circuit.

4) FM Modulator

A. The amplitude of the FM signal is limited, so the signal is recorded on tape near the maximum record level which increases the S/N ratio.

B. The FM carrier is se to 3.4MHz (at the Sync tips) and the deviation to 4.4MHz by inside IC circuit (for the white peak). The actual device which constitutes the FM modulator is a stable multivibrator.

This multivibrator generates a sine wave output of variable frequency.

The frequency of sine wave is governed by the level of the processed video signal at any given point. Therefore, the processed video signal varies the frequency of the sine wave which is frequency modulation (FM). During playback in SLP mode, the crosstalk of the adjacent track is more apparent than is standard mode. It appears as jitter and noise on the monitor. To reduce this noise from the screen, the FM carrier frequency has to be 1/2fh shifted up during recording. This is done by applying the head switching pulse to the FM modulator control pin57 during SLP recording. The FM modulated luminance signal goes to record equalizer circuit and it is mixed with chrominance signal at the record Amp circuit inside video IC.

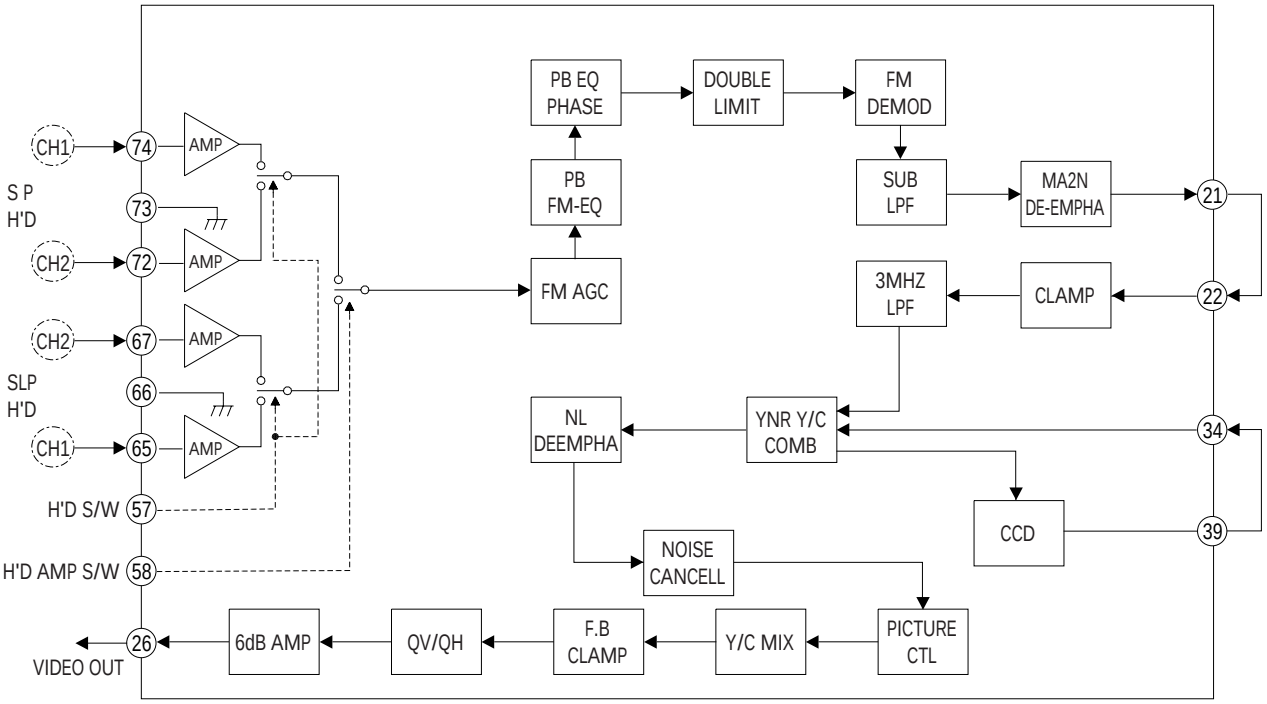
5) Record Amp

The frequency modulated luminance signal and chroma signal are mixed in the record amp of pre-amp block inside video IC. Then this mixed signal is amplified and supplied to the video heads via the rotary transformer and recorded on the magnetic tape.

Tape speed selection determines which video heads will be used. That is, signal output from pin 66 (SLP) and 73 (SP) of pre-amp block are supplied to video heads.

Control signal of speed mode is applied to pin 53(clock), 54(data), 55(chip select) of video IC from Micom IC.

(2) Luminance Signal Playback System



IC301 LA71207M

Fig. 7-19 Luminance Playback Process

1) Outline

The video signal recorded on the tape is picked up by CH1,CH2 head and is supplied to pre-amp block via rotary trans. During playback, as per the speed, SP and SLP head is determined by Pin60 of respectively.
CH1 signal inputs to Pins 65 and 74 while CH2 signal inputs to Pins 67 and 72 of video IC. The pick up operation is controlled by the head switching pulse inputted to pin 57. During the high portion of the switching pulse, CH2 is picked-up and just the opposite is true for CH1. In the pre amp IC, the FM signal is amplified 60dB and this signal is applied to FM AGC.

2) FM AGC AMP

At the FM AGC Amp (FM), signals are automatically balanced. One of the AGC circuit outputs is fed to AGC detector circuit which detects signal level fluctuations. The detector output signal is applied to the FM AGC Amp to keep the output constant.This output is applied to the PB FM EQ block. FM EQ is correct the phase distortion and level. The signal through PB EQ circuit is applied to the double limiter.

3) Double Limiter Circuit

A FM signal on the tape which contains AM components will be read during playback. If there is a severe AM component, a drastic drop in FM carrier can occur. This lack of FM carrier can be called a noise region. Double limiting is used for improving the S/N ratio and carrier loss. The playback FM signal is split into two paths, one goes to high pass filler and sub-limiter. The other goes to the main-limiter after passing through a LPF. ONE path of the FM signal goes to the high pass filter, so that the low frequency(AM) component can be removed, and the other carrier is supplied to the sub-limiter. The output signal of sub-limiter is mixed with the signal from the low-pass filter and sent to the FM demodulation circuit.

4) FM DEMODULATOR

The FM demodulator consists of a stable mono multivibrator balanced modulator (BM) and a LPF. The FM demodulator circuit first converts the FM signal to a pulse width modulator signal. Then the circuit smoothes the PWM signal to demodulate the video signal. This demodulated signal is fed to the LPF to remove its FM carrier component and any other harmonics. The demodulated luminance signal outputs from Pin 21 and is applied to the 3MHz LPF through main deemphasis circuit. To reduce demodulation noise, the output of the 3MHz LPF is applied to a non-linear deemphasis circuit through YNR circuit.

5) Main De-emphasis Circuit

Before modulation, main emphasis was performed. Because the high frequency components of video signal were boosted more than the low frequency components in the recording mode, main deemphasis must be performed to obtain a normal video signal. That is this circuit returns the emphasized high frequency component to the original value.

6) Non Linear De-Emphasis Circuit

This circuit is the counter part of the dynamic pre-emphasis circuit during recording. The characteristics are also the opposite of those in recording.

7) Drop Out Compensator/YNR Circuit

This circuit compensated for missing parts of the FM signal due to dust, dirt on the tape or irregular tape coating, etc. The clamped video signal is supplied to the CCD 1H circuit. The 1H delayed video signal from CCD block is also supplied to the 6MHz LPF to reject the sampling noise of CCD IC.
Then, the output of LPF is applied to Pin 34 of video IC. When the DOC detector detects the FM loss, a 1H delayed video signal is added in place of the missing signal.

8) Noise Canceller Circuit

The noise canceller circuit removes the high frequency noise contained in the video signal which has the reverse characteristics of the detail enhance in the recording mode. The output of the noise canceller circuit is supplied to the Luminance and Chrominance mixer circuit. The mixed chroma and luminance signal are then output at Pin 26.

(3) Chroma Signal Recording System

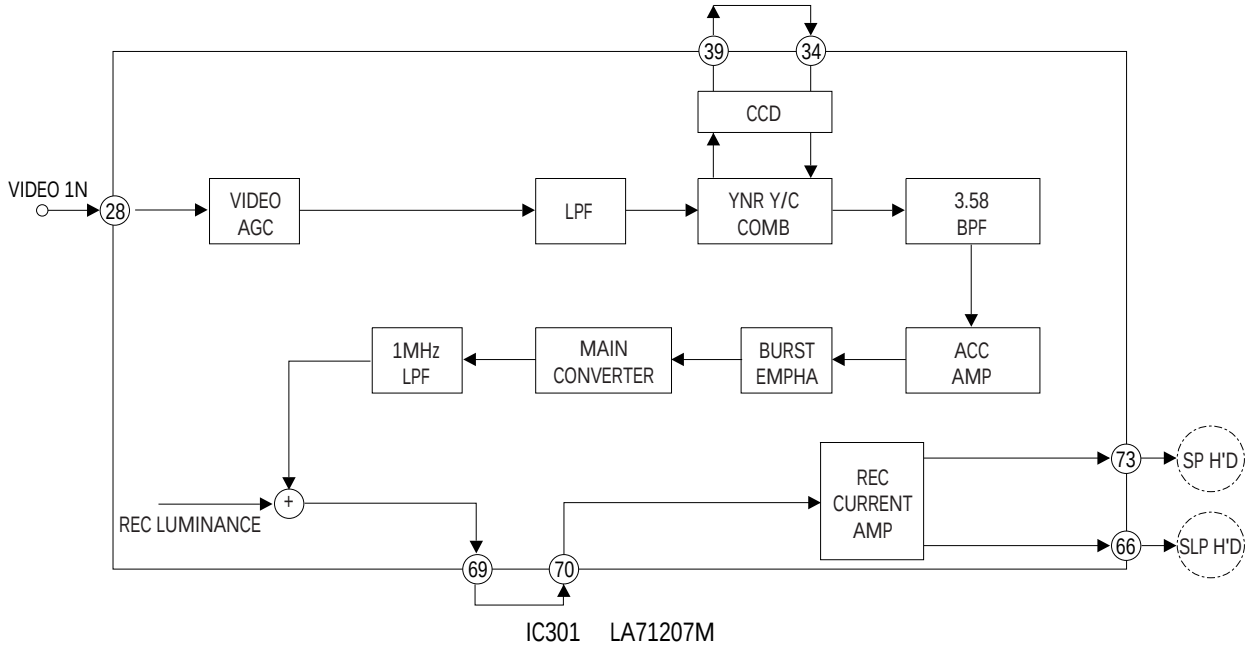


Fig. 7-20 Chrominance Record Process

1) Outline

Fig. 7-20 shows the chroma signal recording system. The chroma signal recording process is performed by video IC. The input video signal is fed to Pin 28 of IC and supplied to Y/C COMB circuit through AGC AMP.

The output signal of Y/C COMB circuit is applied to ACC amplifier. The ACC amplifier is used for both burst ACC which keeps the burst level at a constant value in recording and the color ACC which controls the reference level of the burst ACC with the color signal level. The color ACC works to maintain a relatively high output level by boosting low level input signals to improve color S/N ratio. The signal is then applied to the burst emphasis circuit. Burst emphasis emphasizes the burst signal by +6dB during recording and feeds it to the main converter. The 3.58MHz signal are mixed in the main converter to perform frequency conversion.

The main converter is a mixer having the two types of output components which are the added frequency of 4.21+3.58=7.8MHz and the difference frequency component 629KHz.

Added frequency is rejected by the 1MHz LPF and the 629KHz down converted chroma signal is supplied to the luma/chroma mixer of pre-amp block and then recorded on the tape via the record amp and heads.

AFC detection is performed with the head switching pulse and the fh signal generated from 321fh VOC output. The detector output controls the VCO frequency which will be locked precisely at 320fh (5.035MHz).

he 320fh signal is counted down to 1/8 and the resultant 40fh (=629KHz)carrier signal is phase shifted triggered by each horizontal sync signal which is wave shaped as a 50% duty pulse by the pulse generator.

The direction of the rotational phase shift depends on the levels of the rotary head switching signal from pin 57 and when the switching signal is "H" level, the phase is retarded by 90 degrees for every 1H, and when is is at a "L" level it will advance by 90° for every 1H this 40fh phase shifted sub-carrier (PSSC) signal enters the sub-converter and the 3.58MHz carrier signal is locked at the color burst frequency by the record APC.

The PSSC signal is frequency converted into 3.58MHz +/-629KHz. Then 4.21MHz component (=3.58MHz+/-629KHz)is extracted through a 4.2MHz BPF.

The 4.21MHz signal is used as a carrier signal for down conversion of the color signal as described previously.

2) ACC (Automatic Color Gain Control) Circuit

The ACC is used as burst ACC in the LP mode, however it is also used for peak ACC in the SP/SLP mode.
The purpose of using two different ACC operations is to improve the overall Chroma S/N ratio during playback. In SP and SLP, there is H-sync alignment. This indicates that there is bust alignment as well. Whenever two video tracks overlap or a video head picks up crosstalk from an adjacent track, beats are produced during playback. Perhaps the most noticeable beats are produced by H-sync and burst. But in SP and SLP, these beats occur right at H-sync and burst and are out of the picture. In LP, however, there is no H-sync alignment and these beats can be seen in the picture. To keep the beats at a minimum in LP, we keep the burst level constant so that the beat intensity is constant. We know that ACC acts to improve the color S/N,and in LP, the ACC detector locks at the burst level,and keeps it constant. Thus we have ACC operation with the least beats. In SP and SLP, the beats caused by burst overlap are out of picture, so we don't really mind if the burst level changes or not. To improve the color S/N ratio even more,we use peak ACC in SP and SLP.That is,if the chroma level is too low to record, the amplification degree is increased by 3dB. However, the chroma level is sufficient for recording, this peak ACC is changed to burst ACC to avoid over amplification. By changing the ACC according to picture color content, the burst level may vary. The color ratio improvement is based on the color content itself during SP and SLP provides a somewhat better S/N ratio.

3) Four (4) Phase Rotation

CH1 is advanced 90° every channel, while CH2 is delayed 90°. When the frequency is set to 629KHz, if phase is shifted by +/-90 it becomes 629KHz +/-90. The 40fh+/-90 (=629KHz +/-90)is balanced modulated via fsc (3.58MHz) depending on which side band is detected. That is, the fs +40fh+/-90 (4.2MHz +/-90) of total frequency is supplied to the main converter. In record mode, the signal operates same as in play back mode. During playback, the phase is returned to original state.

4) AFC (Automatic Frequency Control) Circuit

Luminance signal is input to H-sync separator. The H-sync is separated and supplied to phase comparator.
This signal can be described as fh (Horizontal Sync frequency of input video signal). However, VCO oscillates at 320fh (5.035MHz). This 321fh is counted down by 1/8 and 1/40 and resultant fh is supplied to phase comparator. fh and fh are supplied to the phase comparator for comparison of their phases.
After comparison, the phase
differences is output to VCO (320fh) in terms of error voltage. Therefore, the oscillation frequency of VCO is controlled by this error voltage. That is, if the fh phase is changed by H-sync signal fh, error voltage is changed accordingly and if the phases of fh and fh are met due to change of VCO oscillation frequency, error voltage does not feedback. 320fh VCO is oscillated in accordance with phase sync at fh. Therefore, 40fh input to sub converter by phase shift is always sync horized with phase.
The AFC loop performs the same operation during record and playback. In recording, phase of VCO is in accordance with H-sync signal of current video signal.
Which in playback, the phase sync of VCO is consistent with H-sync signal which is separated from the video signal.

(4) Chroma Signal Playback System

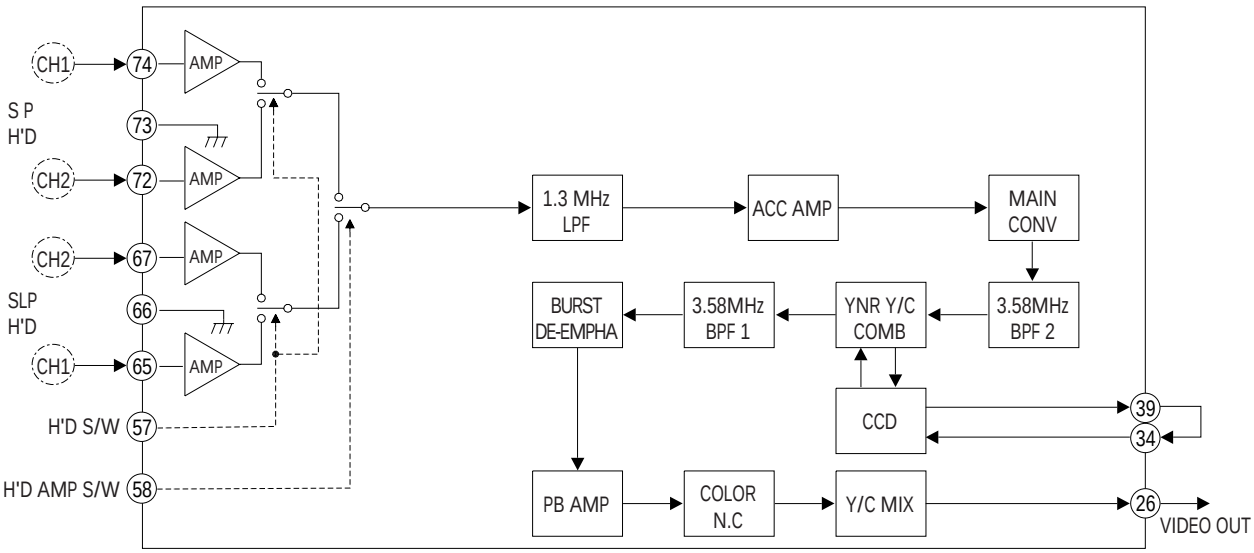

Fig. 7-21 Chrominance Playback Process

1) Outline

Fig. 7-21 shows the chroma signal playback system.
The FM signals picked up by the CH-1 and CH-2 video heads are supplied to the pre-amp block.
The FM signal from CH-1 and CH-2 are alternately selected by the switch and output signal as a continuous signal. Goes to the ACC amp through the 1.3MHz LPF. The 1.3MHz LPF is used for passing only down converted 629KHz chroma signal in the playback mode. The ACC amp stabilizes the 629KHz color signal level.
The output color signal from amp then enters the main converter circuit. In the main converter circuit this signal is mixed with the 4.21MHz phase shifted carrier signal and converted into 4.21MHz + 629KHz signals.

2) Main Converter

Inside of IC, the main converter converts the 629KHz rotational chroma signal to a 3.58MHz non-rotational signal. The two inputs of this main converter are the 629KHz signal, which comes from the output of the ACC, and a 4.21MHz which has the same rotational phase as the 629KHz signal. It is important that the rotational phase of the 4.21MHz signal is the same direction as the 629KHz playback chroma signal. To obtain the 3.58MHz non-rotational stable signal, the same direction rotational signal should be mixed with the rotational chroma signal. During the conversion process, the phase is also mixed by the frequency. Therefore, when 629KHz is subtraced from 4.21MHz,the result is the non-rotational 3.58MHz stable signal. The output signal of the main converter goes to the 3.58MHz BPF. In the 3.58MHz BPF,the conversion noise(4.21MHz+629KHz=4.8MHz) is rejected and the 3.58MHz color signal goes to the comb filter.
In the comb filter, the crosstalk components due to the adjacent track are eliminated and the color signal is applied to PB-AMP, BURST De-Emphasis, Killer and are applied to LUMA and CHROMA mixer input through the CNC block.

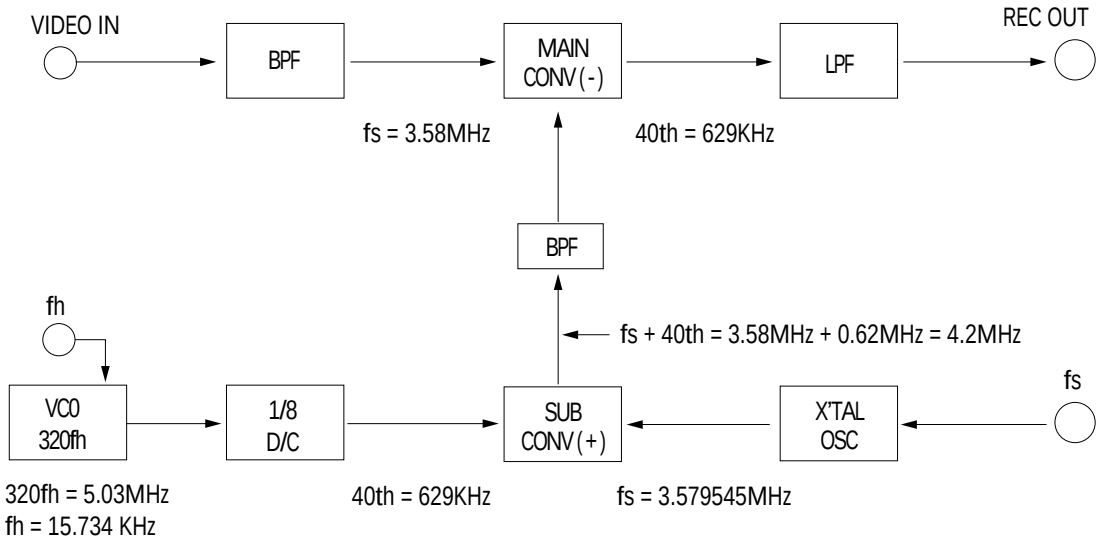

Fig. 7-22 Block Diagram of Color REC mode by the method of a Down Converter

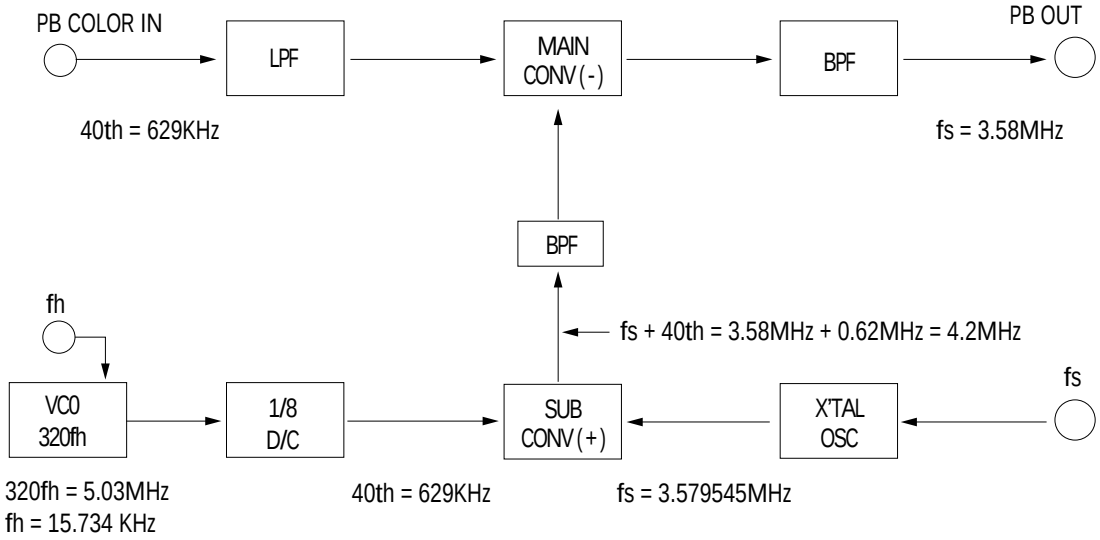

Fig. 7-23 Block Diagram of Color PB mode by the method of a Down Converter

7-10 Hi-Fi Audio

(1) Outline

Hi-Fi circuit consists of HiFi audio LPF,VCO,BPF,FM detect circuit and switching noise compensator, PRE-AMP etc. Linear audio consists of an ALC circuit,REC EQ circuit and a PB EQ circuit.
Hi-Fi and Linear audio share the same input selector,output selector and mute circuit.

1) REC Mode (L-CH Only)

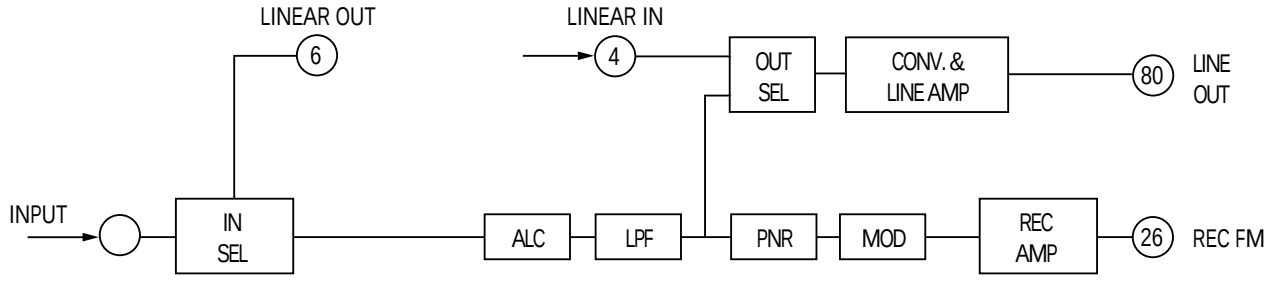

Fig. 7-24 REC Mode (L-CH Only)

2) PB Mode (L-CH Olny)

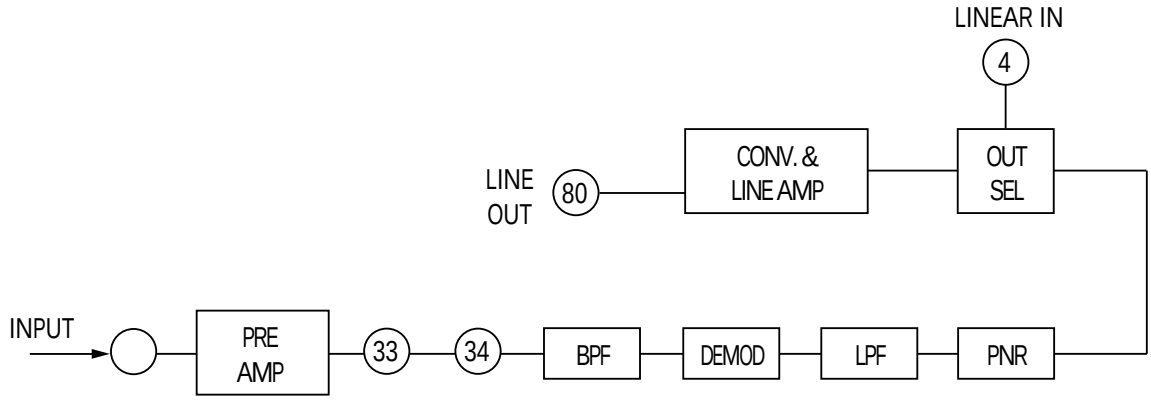

Fig. 7-25 PB Mode (L-CH Only)

(2) Block Description

1) Input Selector

Input selector outputs 1 signal from 4 different signals received. It outputs 1 selected signal from tuner,rear,front.

2) Normal(Linear) Selector

Two signals,L-CH and R-CH are inputed to Hi-Fi IC.But,linear audio is capable of receiving only one signal.Therefore,the 2 input signals must be selected. Usually,the outputs are mixed signals of L-CH and R-CH unlike the input selector,the normal selector does not amplify the selected signal.

3) Output Selector

It selects to output Hi-Fi L-CH,Hi-Fi R-CH,LINEAR and MIX(Hi-Fi+LINEAR) signals with the final output IC pin 78 (R-CH) and pin 80 (L-CH).

4) Output ALC(Convertor)

ALC is used because when the input level of RF converter gets bigger,it shows up as noise on the screen. But,this block is not used this model(ALC OFF)

5) PNR(Peak Noise Reduction)

It is a type of emphasis,de-emphasis function to eliminate noise during modulation /demodulation PNR operates as that of VHS FORMAT to reduce noise.

6) Audio Limiter

Before modulating the signals from PNR block,it limits signals exceeding the size limit to max deviation of +/- 150KHz.

7) VCO(Voltage Control Oscillation)

It is a modulation functionthat oscillates 1.3MHz (L-CH) and 1.7MHz (R-CH).

8) RF LPF

It is a function to eliminate the harmonic components of Hi-Fi carrier formed during VCO,which may affect other block. It's pass-band approximately 2MHz.

9) MIXER

It mixes the Hi-Fi carrier formed in L-CH and R-CH. However,due to the frequency difference between L-CH and R-CH,when equal amount of R-CH is recorded to tape,R-CH is must smaiier than L-CH.
Therefore,the R-CH output is approximately 10dB bigger than L-CH.

10) Current Amp

It is the final amplifier of the mixed Hi-Fi carrier IC pin 28's resistance controls current, which change the size of IC pin 26.

11) AGC(Auto Gain Control)

It maintains uniform size of Hi-Fi envelope,which is inputed by pre-amp in play back mode.

12) BPF(Band Pass Filter)

L-CH and R-CH each has BPF. The center frequency is same as carrier frequency.
It is used to receive only Hi-Fi carrier from all signals inputed to pre-amp.

13) SW Noise Compensation

Unlike the linear audio,insted of using fixed head,drum heads are used,which creates halting points However,in order for the audio to be headed continuously,the damages from halting points are modulated,which creates noise. SW noise compensation is a block to minimize this particular noise.

14) Hold Pulse

It makes standard signal(Pulse) to compensate SW noise.

15) DET(Hi-Fi/LINEAR)

From the Hi-Fi envelope inputed from pre-amp,it decides whether the signal passing through L-CH BPF is Hi-Fi or LINEAR tape it's size(the signal passing through BPF is below 10mVpp, it is not Hi-Fi,therefore,it output linear)

16) DOC(Drop Out Compensation)

If demodulation is conducted without properly treating the damage on Hi-Fi envelope caused by scratch on the tape,noise occurs. In order to improve this noise occurrence,DO DET compensate the drop-out using the same methode of compensating the switching noise when the damage on the envelope ranges 10~15mVpp.

17) ENV DET

To obtain optimal tracking,envelop must be peak to peak and micom should be in DC. It is a function to convert Hi-Fi envelop to DC. If it is lower than 0.8V at micom,it sends linear mode date to HiFi IC.

18) Serial Data Decoder

It receives IIC BUS to enable the operation of inner block and decodes into serial data.

(3) Pin Port Description (Tuner Mode ; 1KHz, 100% Modulation Input)

PIN NO.	PIN NAME	DC VOLT.	SIGNAL	REMARK
1	LINE MUTE	0 / 5	-	Reduce the line out noise.
2	Linear out to TM	4.2 V	-17 dbm	Converter Model Only
3	Vcc 9V	9 V		Power Supply for in/out Select
4	Linear Input	2.5 V	- 28.2 dBV	Audio from A/V IC
5	Vcc 5V	5 V		Power Supply for in/out Select
6	Linear out ti A/V	2.5 V	-21.5 dBV	Audio out to A/V IC
7	EXT1-INPUT (L)	0	-28.2 dBV	Line Input 1 (FRONT)
8	ALC Detector	-		ALC Detector for RF converter
9	EXT2-INPUT (L)	0	-28.2 dBV	Line Input 2 (REAR)
10	GND	-		
11	EXT3-INPUT (L)	0	-28.2 dBV	Line Input 3 (DVD)
12	Monitor Input (L)	2.5 V		DVD Audio (L) Input
13	Input changeover switch output (L)	2.2 V	-21 dBV	PB/REC sitch output . Transform R/P signals into DC.
14	ALC Input (L)	2.5 V	-21 dBV	ALC Input Terminal
15	Vcc 5V	5 V		Power Supply for in/out Select
16	1/2 Vcc	2.5 V		1/2 Vcc Terminal
17	Rec Mute Terminal	0 V		GND (Not in use)
18	NR Waiting Det	-	-	Terminal for waiting dector
19	NR Waiting Filter	2.5 V		NR Waiting Filter 1 For L-CH
20	NR Waiting Filter	2.5 V		NR Waiting Filter 2 For L-CH
21	CCA Reference			CCA Reference for L-CH
22	NR Empha			NR Empahasis for L-CH
23	Tracking DC out	0 ~ 5 v		Hi-Fi Env Det Level Output
24	Audio Pb FM1	2 V / 4 V		Audio Playbak FM 1 input (H)
25	GND			Hi-Fi PRE-AMP GND
26	REC Current OUT			Rec current out to Head
27	Audio Pb FM2	2 V / 4 V		Audio Playbak FM 2 input (L)
28	Crrent adjust	2.4 V		Rec Current adjust point
29	Alc detector			ALC detection
30	Hi-Fi detector			Hi-Fi/ Normal detect
31	Monitor	2.5 V		FM Monitor
32	Vcc 5V	5 V		Power Supply for Hi-Fi
33	Pb FM Out	2.5 V		Output of H'D Amp in PB Mode
34	Pb FM Input	-	350 mVp-p	Input of FM in PB Mode
35	GND			GND FOR LOGIC
36	Vcc 5V	5 V		Power Supply for LOGIC
37	Serial data input	0 / 5 V		
38	Serial clock input	0 / 5 V		
39	Audio head s/w	0 / 5 V		Head s/w 30 hz input
40	Mts Mode out			1V : mo / 2V : St / 3V : Bi

PIN NO.	PIN NAME	DC VOLT.	SIGNAL	REMARK
41	CCA Reference			CCA Reference for R-CH
42	NR Empha			NR Empahasis for R-CH
43	NR Waiting Filter	2.5 V		NR Waiting Filter 2 For R-CH
44	NR Waiting Filter	2.5 V		NR Waiting Filter 1 For R-CH
45	NR Waiting Det	-	-	Terminal for waiting dector
46	Vcc 5V	5 V		Power Supply for in/out Select
47	ALC Input (R)	2.5 V	-21 dBV	ALC Input Terminal
48	Input changeover switch output (R)	2.2 V	-21 dBV	PB/REC sitch output . Transform R/P signals into DC.
49	Mute Control			
50	GND			GND FOR ANALOGE
51	FSC IN		200 mVp-p	3.58 Mhz input
52	DC Reg	1.2 V		Bandgap Power supply for MTS
53	Stereo PLL filter	3.8 V		LPF for Stereo PLL
54	Vcc 5V	5 V		Power Supply for MTS Select
55	Pilot Canceller f	3.8 V		CTL Pin of cancel signal for pilot C.
56	FM Filter			Filter for making stable dc
57	SIF Input			SIF Audio input from TM Block
58	REG Filter	4.5 V		Filter of reference voltage source.
59	Filter Auto Adjust	3.8 V		Loof filterof PLL for auto adj
60	Pilot Det Filter	3.8 V		Detection for pilot detection circuit
61	PC_DC_MO	3.3 V		Absorbing the DC offset
62	PCDOUT	3.8 V		Absorbing the DC offset
63	PCDIN	3.8 V		Absorbing the DC offset
64	PCDBXIN	2.6 V		Absorbing the DC offset
65	Main V/I convert	3.8 V		Converting the voltage of signal
66	SPE Det V/I convert	3.8 V		Connecting pin of smooth capacity of detection circuit.
67	Spectral DET			Converting the voltage of signal
68	Wide Band Det			Connecting pin of smooth capacity of detection circuit.

78	Line out (R-CH)			
79	GND			GND FOR AUDIO
80	Line out (L-CH)			

7-11 Linear Audio

(1) Block Diagram

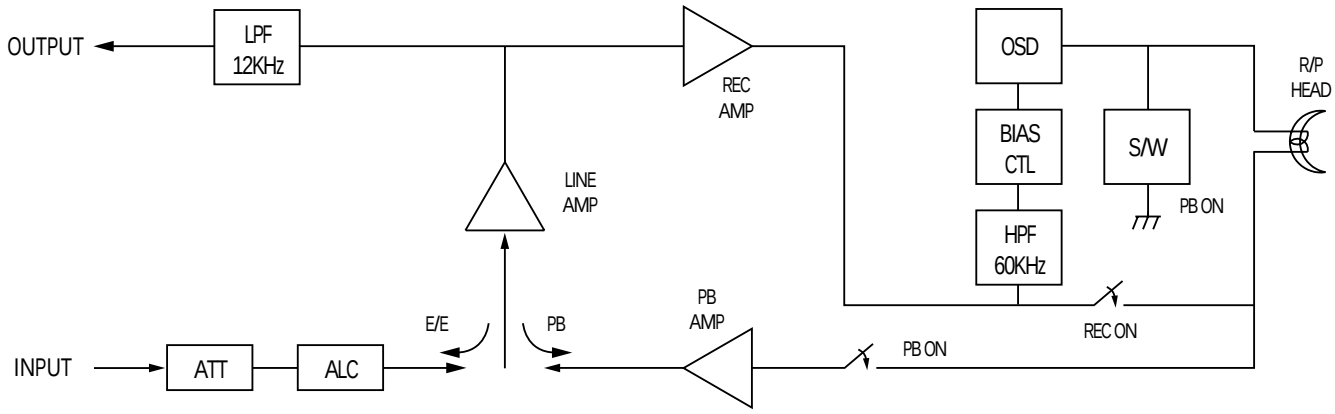

Fig. 7-26 Block Diagram

(2) Block Description

1) ATT (Attenuation)

Line amp is shared between PB mode and E/E mode, which reduces the recorded signal by 20dB and resister.

2) ALC (Auto Level Control)

If the signal level is lower than the reference signal (-6dBm) level, the output signal will equal the input signal. However, if the input signal is higher than the reference signal, the output will not equal the input and will gen erate uniform signal.

* ALC Application Purpose : Since linear audio is in AM (amplitude modulation) and uses magnetic recording device, it only records limited size and as the size of input signal increases, distortion increases. To prevent this occurance, mark sure the signal does not get bigger even if the level of distortion repodly increases.

3) LINE AMP

Line amp's gain is approximately 23dB. The purpose of the line amp is to amplify to 68dB in order to obtain the recorded signal on the tape during playback. As the amp gain increases, the passband decreases, which enables the amplification of low frequency. However, it is impossible to amplify frequency of 10KHz to 68dB with just 1 OPAMP. Therefore, to satisfy frequency and gain.

Line amp must be constructed into 2 steps of OP AMP. (gain is fixed within IC)

4) 12KHz LPF

There are various noises to signal output. The loudest noise is the "Video SYNC Frequency" of 15.734KHz In order to eliminate the "Video SYNC Frequency", "LPF" and "TRAP" are combined to "LPF".

5) PB AMP

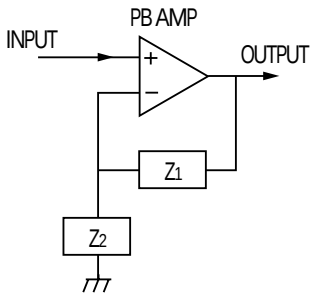

Fig. 7-27 PB Amp

The diagram to the left is the playback amp and the gain input/output are as follows.

$$Av = 1 + \frac{Z_1}{Z_2} \approx \frac{Z_1}{Z_2}$$

The playback characteristic of VHS format can be satisfied by using Z_1, Z_2 in the above equation.
PB amp gain should be designed to be approximately 45dB (1KHz).

6) REC AMP

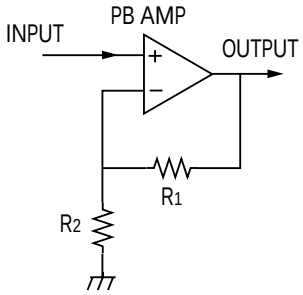

Fig. 7-28 REC Amp

The diagram to the left is REC AMP. The amp gain is approximately 14dB. R_1 and R_2 that determine the gain is located inside the IC.
It is uniform and independent to frequency. Frequency characteristics should be considered when designing rec amp. The REC amp should be the opposite to playback characteristics.

7) OSC (Oscillation)

Oscillation frequency is 70KHz. It's size is approximately 45Vp-p. it operates on recoed mode. It is supplied to audio erase head and full erase head used to erase already recorded signals.
Also, it conducts "AM (Amplitude Modulation)" using oscillation signals.

8) BIAS Control

Oscillation coil is used in oscillation Bias. Coil output changes according to the impedance of F/E, A/E and R/P head connected to the coil.

9) 60KHz HPF

There must be standard signal for bias control and that signal uses HPF only to obtain oscillation signal that comes through R/P head.

10) S/W

The switch opens when recording, shorts during playback and exterior transister is used.

(3) Pin Port Description (IC301 ; LA71207M)

PIN NO.	PIN NAME	DC VOLT.	SIGNAL	REMARK
9	REC OUT	2.3	-2dBm	REC AMP OUTPUT (GAIN ; 14dB)
75	GND	0	-	
6	BIAS	REC:2.3 PB:0	70KHz+1KHz MIX 3Vp-p	It is grounded due to the switch inside of IC during playback. During recording, it operates on 60KHz input HPF
11	BIAS CTL	REC:4.3V PB:5V	-	The BIAS CTL voltage change depends on the external TR.
6	PB EQ (+)	2.3	-	PB EQ AMP INPUT (+)
5	PB EQ (-)	2.3	-	PB EQ AMP INPUT (-)
7	PB EQ SW	2.3	-	PB EQ AMP SLP SW
3	PB EQ OUT	2.3	-32dBm	PB EQ AMP OUTPUT
2	LINE PB IN	2.3	-32dBm	LINE AMP INPUT (PB)
58	A.MUTE	0	-	Operates at HIGH (5V)
76	INPUT 1	2.3	-27dBm	AUDIO INPUT : -27dBm

7-12 TM

(1) Outline

RF and frequency synthesized tuning system
General description : The receiving circuit consists of both ANT input and output circuits, channel selection circuit, PIF circuit and SIF circuit. The receiving circuit selects a desired broadcast signal from TV signals induced on an antenna and sends stable video and audio signals to their respective processing circuits.

(2) Tuner modulator block

As explained, this model is designed in one package to contain a RF MODULATOR BLOCK, TUNER BLOCK AND IF DEMODULATOR BLOCK. Its size is greatly reduced and other noise interference can be minimized to make performance high.

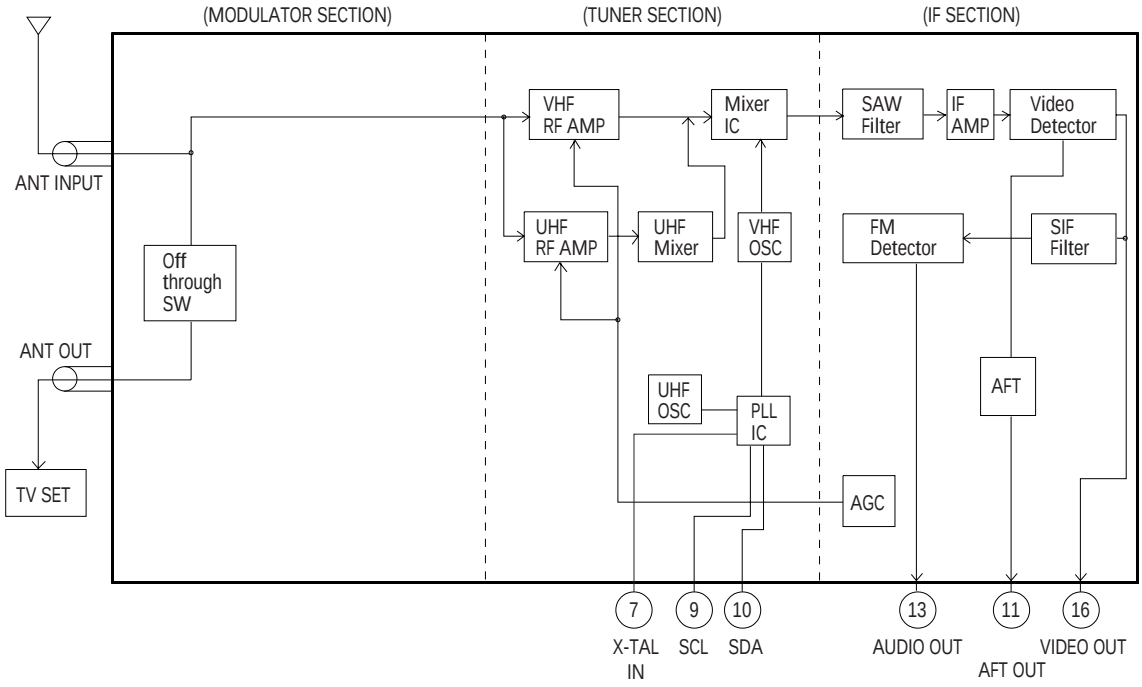

Fig. 7-29 Tuner/demodulator Block Diagram

(3) Tuner Block

A. Low pass filter & high pass filter

This consists of IF trap circuit and UHF & VHF separation circuit. If the input signal is IF(45.75MHz), this filter prevents interference.

B. Single tune & RF AMP

This consists of a filter circuit, RF AMP, impedance conversion circuit, image trap and a single tuning circuit. It prevents noise and other interference signals. RF AMP is controlled by AGC come from IF DEMOD block.

C. Double tune

It consists of a double tuning circuit to improve rejection characteristic which results in a better band characteristic.

D. MOP IC (Mixer, OSC, PLL)

It consists a VHS and UHF OSC and mixer circuit. We applied a double balance mixer to have better rejection characteristic, it shows especially various beat characteristic.

It serects channels and contains charge pump band driver. The minimum step standard frequency 31.25KHZ.

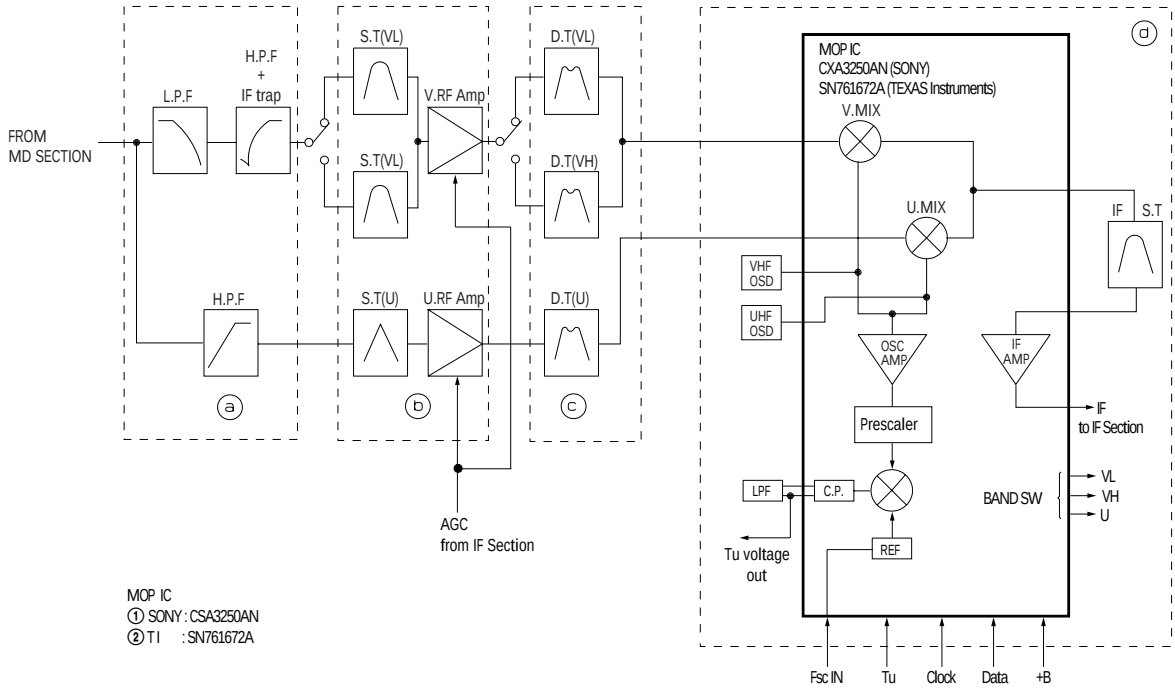

Fig. 7-30 Tuner Section Block Diagram

(4) IF Block

A. SAW FILTER

It passes only needed band of the signal that is converted to IF frequency and decrease other band to minimize the effect of adjacent channel.

B. IF AMP

IF signal ,which is selected in SAW FILTER, is amplified in IF amp frequency enough to be detected. The IF AMP has parallel inputs & outputs structure and consists of 3 series step AMP.Each step has about 20dB gains.These gains are controlled by AGC voltage has maximum 63dB attenuation range.

C. RF AGC CONTROL

It is adjusted to determine RF AGC working point in tuner.

D. FM DETECTOR

After removing AM signal in the limiter AMP ,amplified SIF signal is applied FM detector. This FM detector is PLL detecting type.

E. AFT DETECTER

AFT automatically controls the OSC frequency in the tuner, so that it retains a constant level.
It is a quadrature detection type. The carrier, which is detected from video det is directly input to AFT detector . The 90 degree delayed phase signal is input at the same time to AFT detector and ,the results come out.
Detected AFT voltage is amplified by DC AMP and then applied to pin 13.

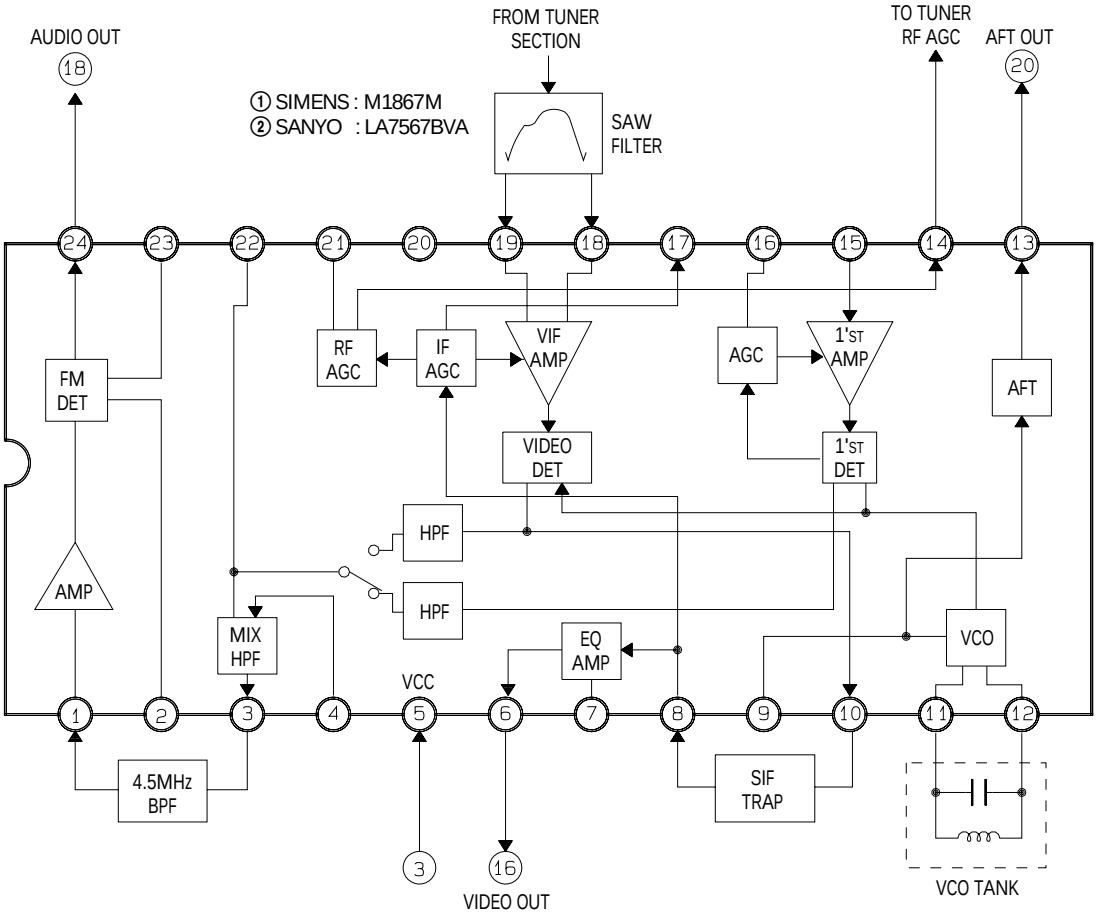

Fig. 7-31 IF Ssection Block Diagram

7-13 OSD

The on screen display circuit consist of a character generator decoder, video mixer, sync separator and sync generator, sync detector circuit.
The data is decoded and generates characters in syncro with composite video signal applied pin 49, 50.
Also the sync detector circuit discriminates the presence of a video signal by detecting sync, if no sync is detected, a blue screen is displayed. In other word, the OSD circuit displays character on the video when there is a video signal or on blue screen when there is no video signal. (No sync).

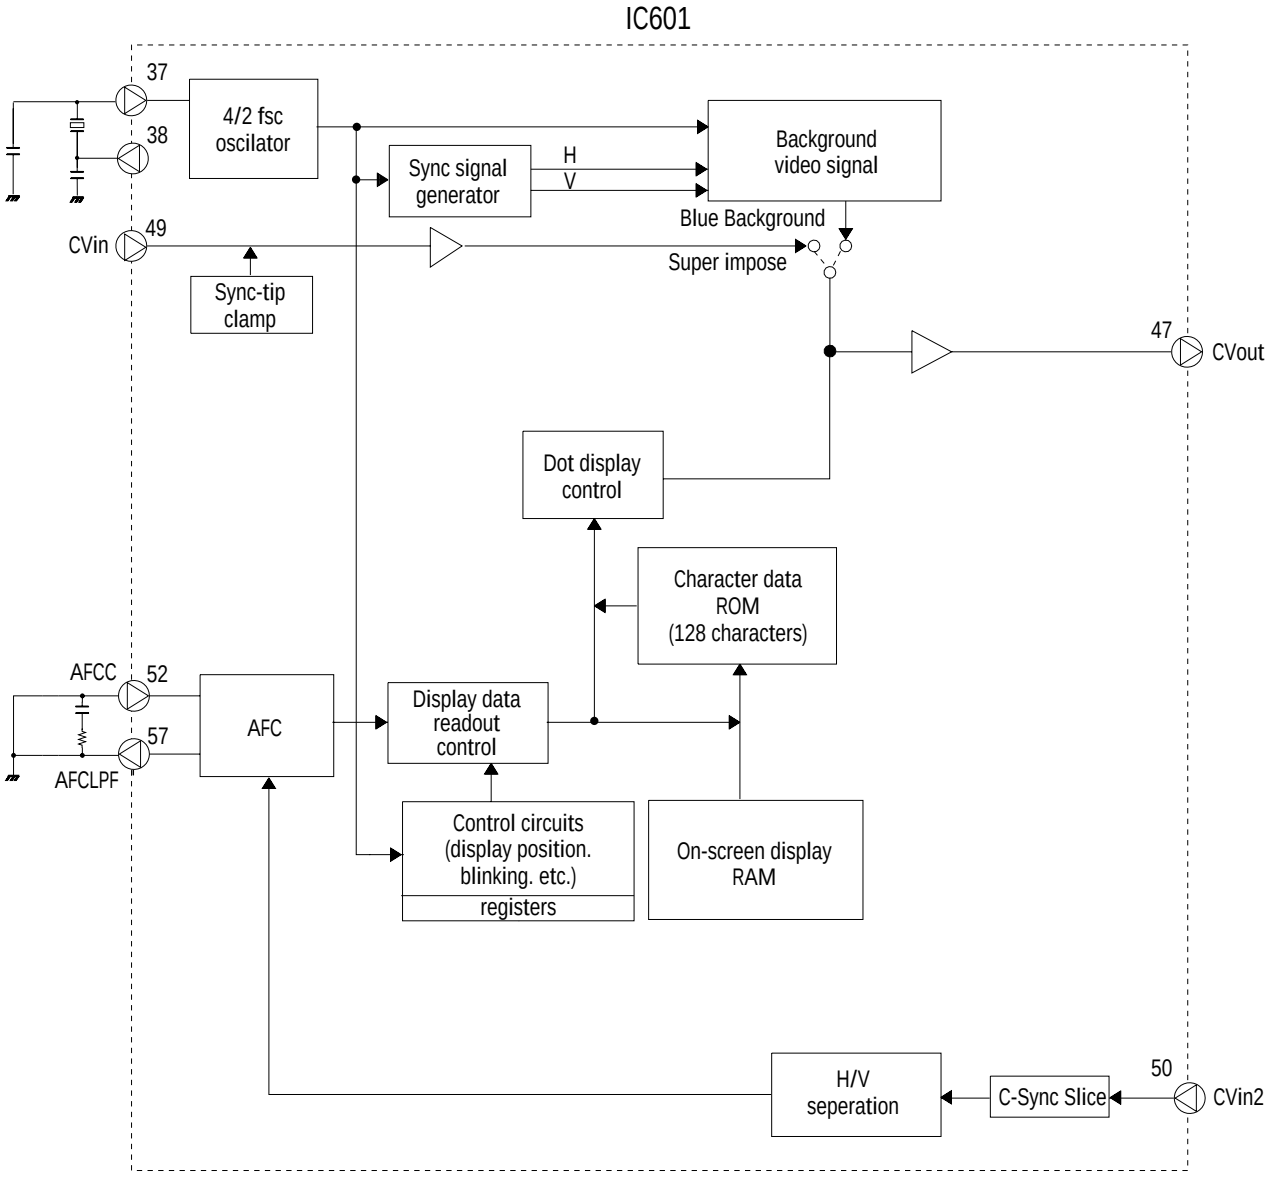

Fig. 7-32 Block Diagram

8. VCR Deck Operating Description

8-1 Features of Mechanism

The following items describe features of the mechanism in VCR.

(1) This VCR uses 3-motor system consisted of a cylinder motor, capstan motor, and loading motor.
A capstan motor is used to drive the reel and the driving force is transmitted throuch the belt capstan.
The cassette loading, tape loading, and mode shift operation are performed by the loading motor.

(2) The time duration from cassette-in to picture appearance is shortened by employing the loading drive mechanism (automatic transferring operation from the cassette loading to the tape loading by rotating the loading motor continuously), and by increasing the speed of the tape loading, etc

(3) Employment of the full loading system shortens time required to shift the mode such as STOP to PLAY-BACK picture display.

(4) To simplify wiring and others, the electrical components relating to operation of the mechanical deck, such as sensors, mode switch, servo microcomputer, etc. are mounted on the PCB arranged all over the bottom side of the mechanical deck.

8-2 Basic Configuration of Mechanism

As shown in Fig. 8-1, the mechanism of VCR is configured with five main blocks, and each operation is precisely controlled by the microcomputer built in the system control section.

First, load a video cassette tape in VCR :

(1) The cassette is automatically set on the reel disc.

(2) The tape is pulled out from the cassette, and wrapped around the cylinder.

(3) The cylinder turns in a constant speed rate synchronizing with the vertical Sync. signal of video signal.

(4) The tape runs in synchronization with cylinder rotation and traces the video tracks precisely.

(5) The running tape is taken up by the reel, the tape feeding side is given with a proper tension so that tape is not slacked.

The above series of operations are performed under control of the system control section. The system control section also sends commands to each mechanism according to the operation buttons, thus the VCR is designed so that various operations such as recording, playback, special playback, FPS / RPS, and FF / REW, etc. are correctly performed.

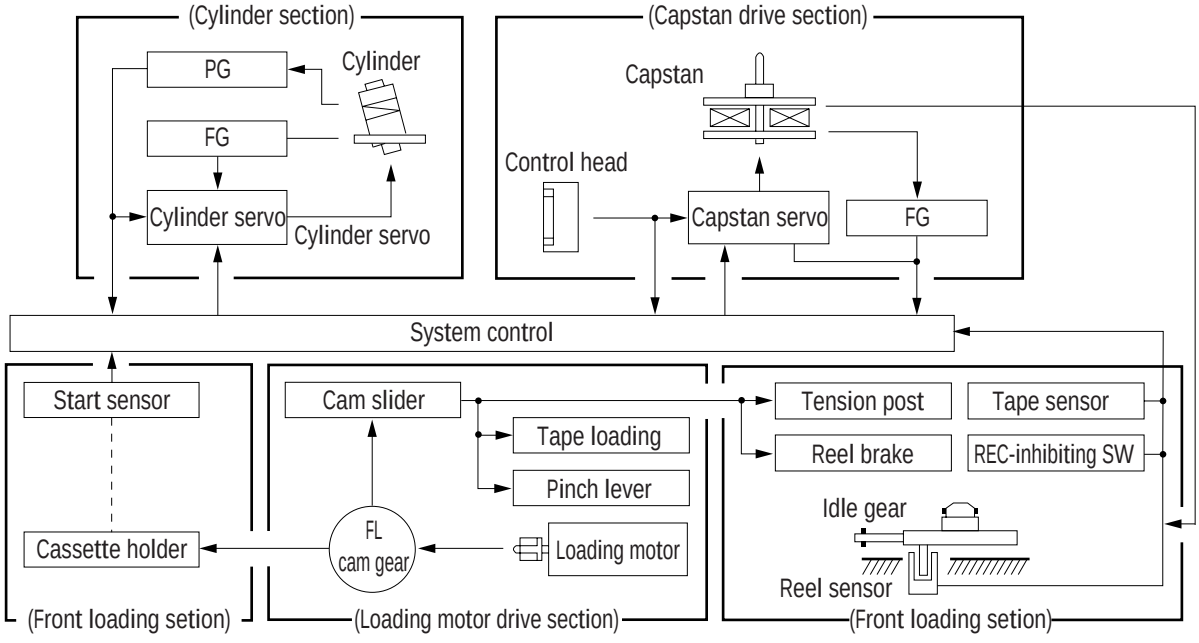

Fig. 8-1 Basic Configuration of Mechanism

8-3 Main Mechanism and Functions

8-3-1 Tape Path System

The tape come out from the supply reel (S) of the video cassette runs through paths shown in Figs. 8-2 and 8-3, and is taken up by the take-up (T) reel. (S stands for the supply reel, and T for the take-up reel, hereafter.)
At S reel side (tape enterance side of the cylinder) against the cylinder, a tension post to allow the tape surface to contact with each head with a proper tension which assures stable running, an FE head which erases entire data of the tape, and an S guide roller which restricts tape motion in upward / downward direction are provided.
In the same way, a T guide roller, audio head to record audio signals at upper side of the tape, control head to record and reproduce a control signal at lower side of the tape, and an audio erase head to erase only the audio signals and perform after-recording in parallel with the audio head are provided at T reel side. (tape exit side of the cylinder).
The guide parts marked with asterisks (*) are equipped with the adjusting mechanism to stabilize the tape running or to record and reproduce the signals precisely.

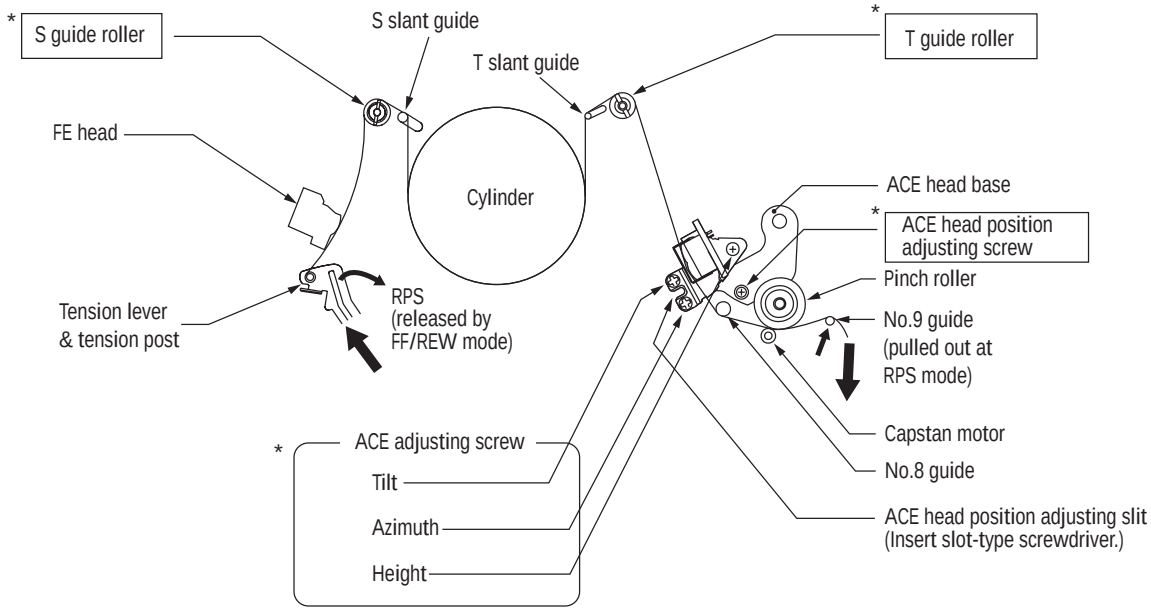

Fig. 8-2 Tape Path System

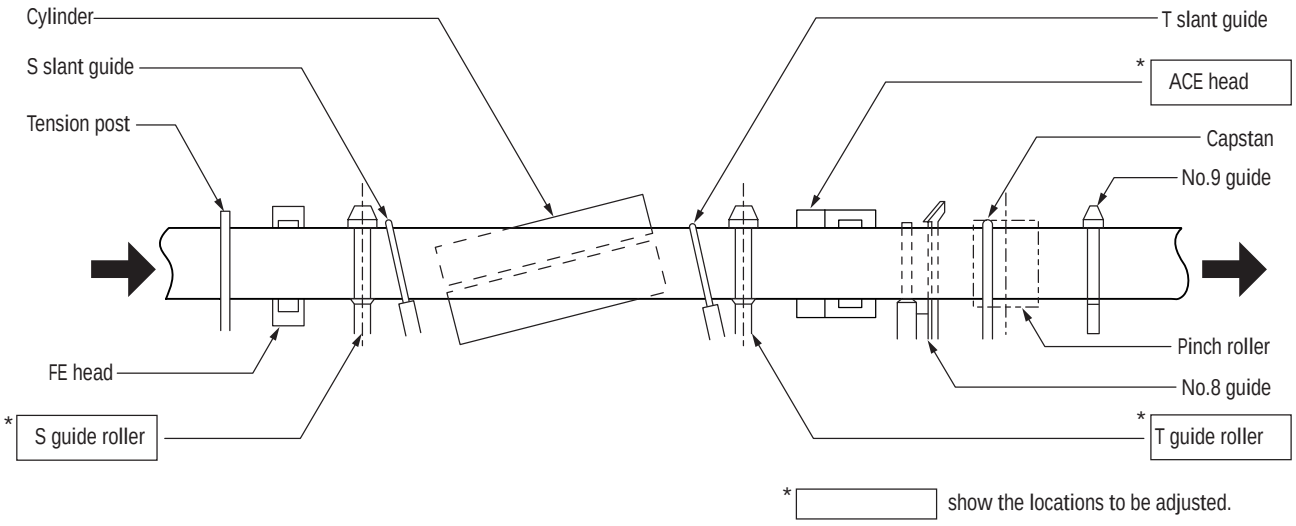

Fig. 8-3 Guide Path System

8-3-2 Reel Drive System

The reel drive system consists of a capstan motor as a drive power source, belt as a power transmission mechanism, clutch mechanism, idle gears, and a reel disc. Selecting of forward rotation or reverse rotation is carried out by an idle gear which changes its rotating direction according to rotating direction of the clutch holder.
Reel take-up torque is selected according to an operation mode.
In the record, playback, fps, rps modes, the reel take-up torque is controlled by the clutch mechanism, thereby the tape fed by the capstan is taken up with a proper torque.
In the FF and REW modes, the clutch enters a direct connecting status in which the clutch mechanism does not operate and the capstan drive torque is transmitted without reduction, so a high speed taking-up is enabled.

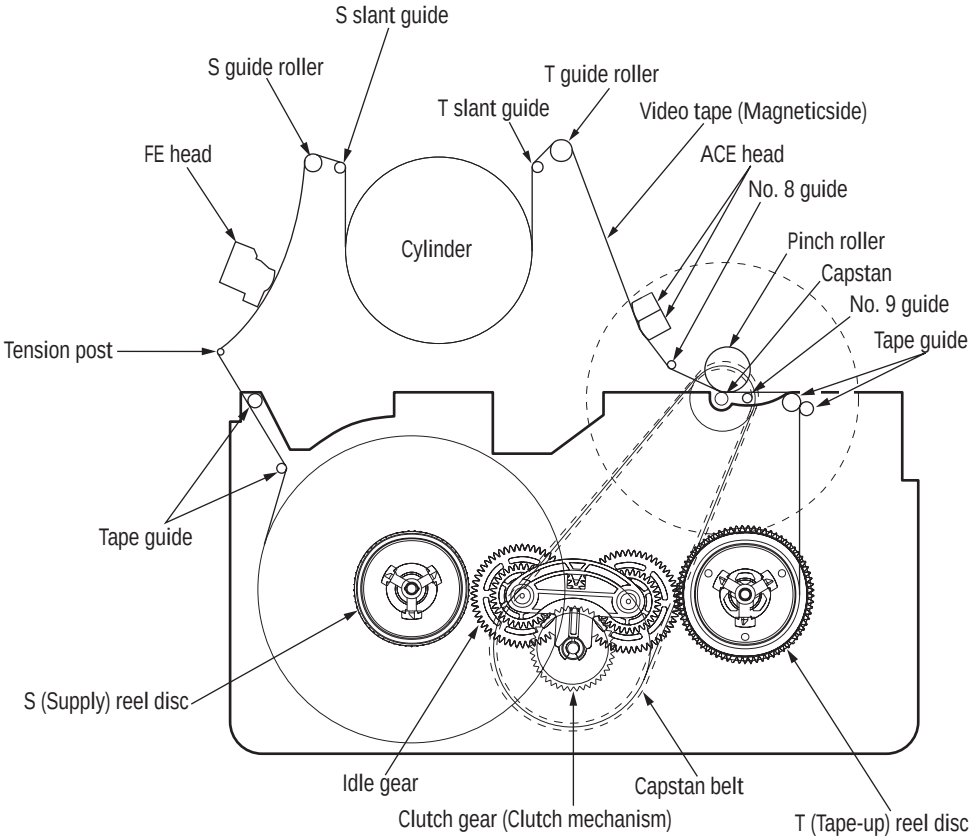

Fig. 8-4 Reel Drive System

8-4 Basis of the Mechanism

8-4-1 Front Loading

(1) When a video cassette is inserted into the cassette holder and pushed furthermore, FL arm lever is rotated by motion of the cassette holder. The rotation of FL arm lever makes the horizontal moving of FL drive slider.
(2) When the information of Start Sensor OFF is transmitted to the microcomputer, the loading motor starts to rotate.
(3) The rotation is transmitted in a sequence shown below :
Loading motor - worm gear - worm wheel - FL Cam Gear - FL Drive Slider - FL Arm Lever - Cassette Holder
(4) The video cassette is horizontally moved.
(5) The cassette tape is vertically moved.
In this case, the cassette lid is opened.
(6) The cassette tape is set on the reel disc, and loading operation completes.
(7) The cassette tape is loaded.
(8) The status becomes full loading.
(9) When the cassette is out, the reverse steps of the above procedure are carried out.

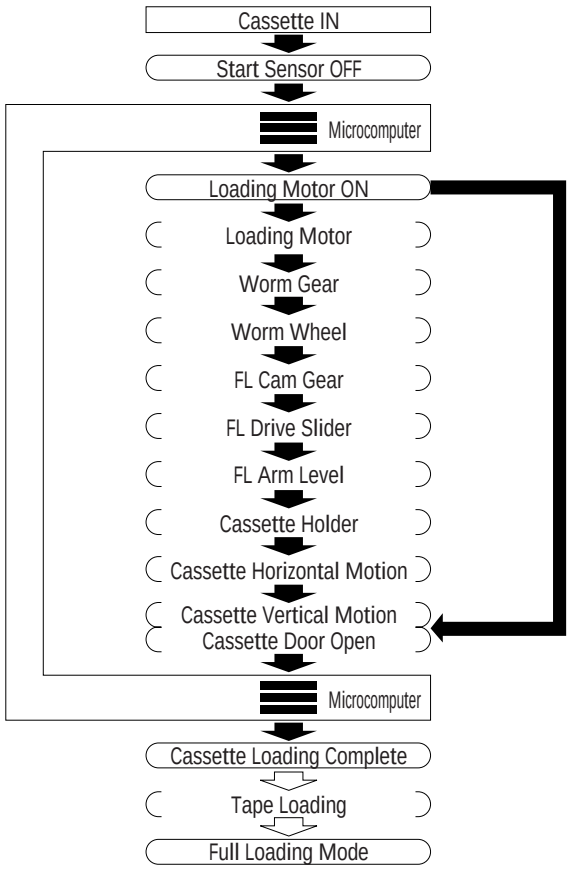

Fig. 8-5

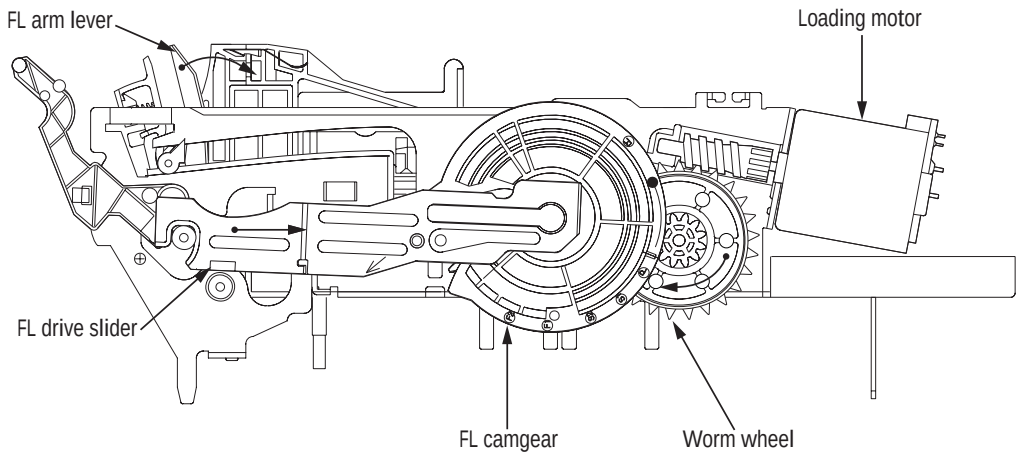

Fig. 8-6 Drive Transmission Path

8-4-2 Cassette loading/unloading Modes

When a cassette is entered in the VCR, the cassette is set on the reel disc by the front loading mechanism.
In this case, the tension post, loading tape guide, capstan motor, and the No.9 guide are positioned inside of the tape in the cassette case.

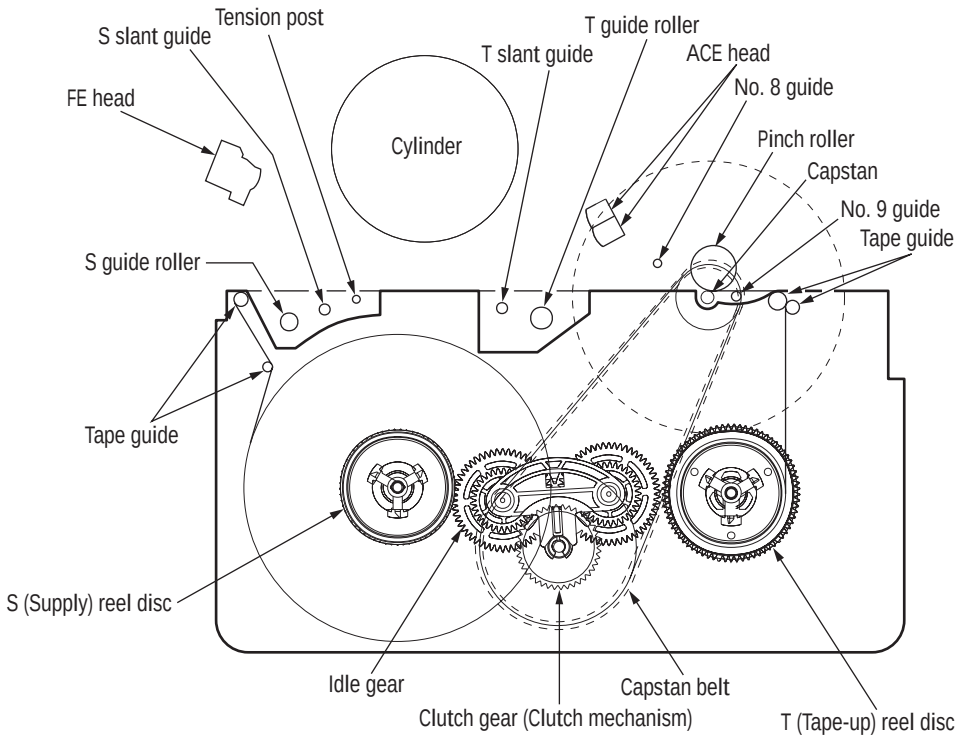

Fig. 8-7 Cassette IN/OUT Mode

8-4-3 Tape Loading

A full loading system is employed.
In the full loading system, the tape loading starts at the same time when the cassette loading operation has completed and cassette has been mounted, and the tape is pulled out, wrapped around the cylinder and the mechanism enters the stop status under this condition.

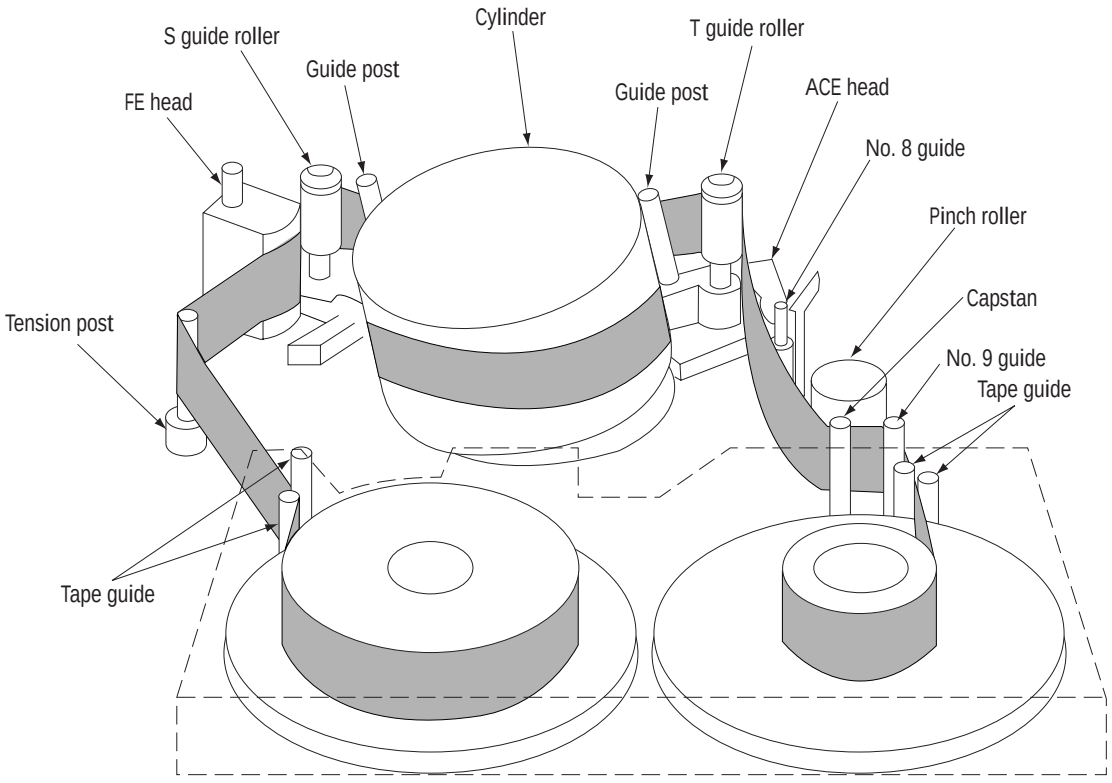

Fig. 8-8 Tape Loading

8-4-4 Playback Standby Mode

In the full loading system, the tape loading starts at the same time when the cassette mounting has completed, the mechanism shifts to the playback position, and enters the standby status with keeping tape wrapped around the cylinder.
In this case, tape tension applied to the cylinder is decreased to protect the tape and to prevent the tape from scratches.

8-4-5 FF/REW Modes

The reels enter a free status by rotating the loading motor to go to FF/REW position.
In this case, the capstan motor rotates in colck-wise direction in the REW mode. The idle gear is swung rightward or leftward according to the rotating direction of the capstan motor. As a result, the T reel rotates in the FF mode or the S reel rotates in the REW mode, thus taking up the tape to the rotating reel.

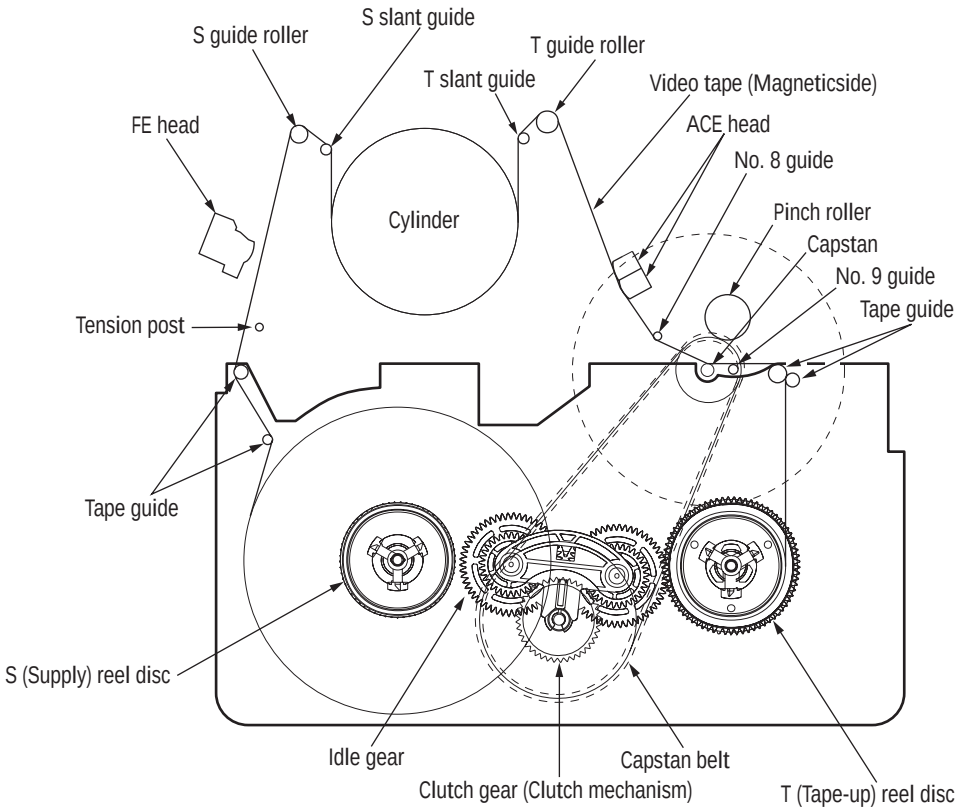

Fig. 8-9 FF/REW Mode

8-4-6 Record/Playback Modes

When the record or playback button is pressed, the tape is fed by the rotation of the capstan motor.
In this case, a tension post touches the tape and braking froces created by the band brake linked with the tension post is applied to the S reel, thereby stabilizing the tape tension. The tape fed by the capstan is taken up around the T reel. The T reel is driven with a constant torque generated by transmitting rotation of the capstan motor to the clutch mechanism.

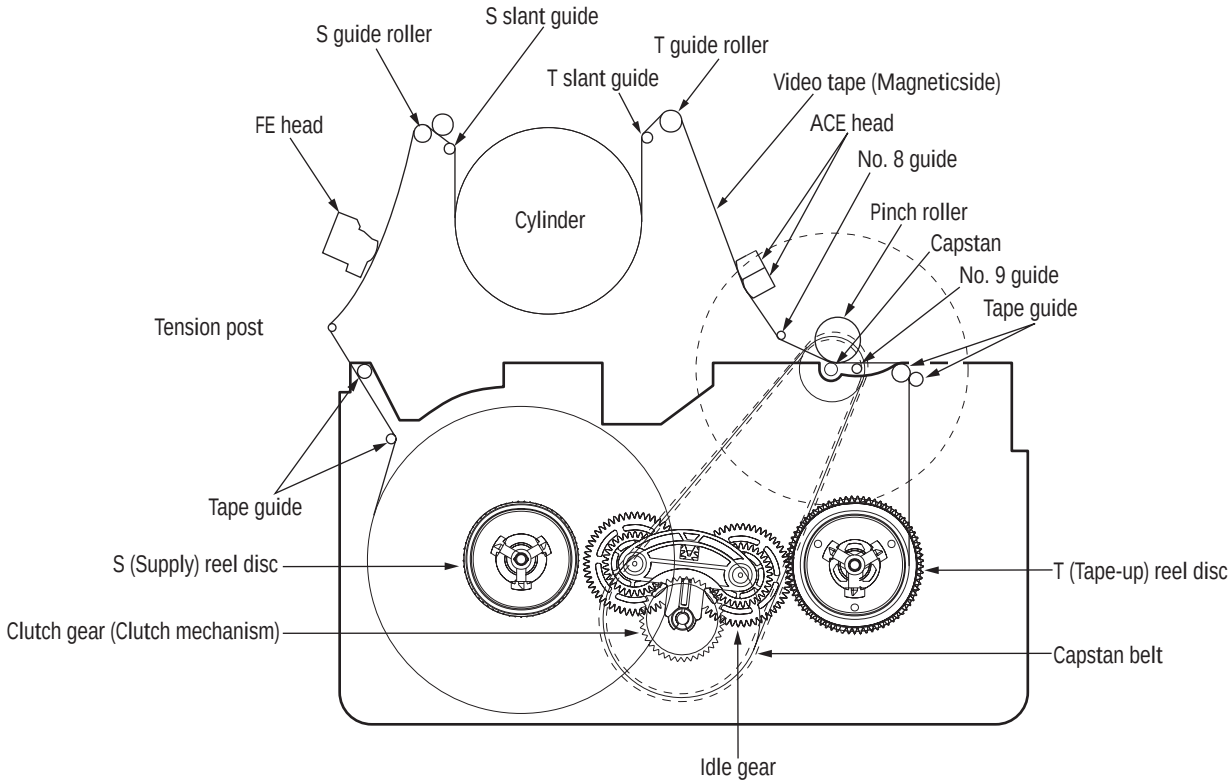

Fig. 8-10 Record/Playback Mode

8-5 System Control

In the VCR, complex mechanism, video, audio, servo circuits, etc. must be operated in specified timings matched each other. The system control circuit performs entire controls for the VCR.
An automatic stop function is also provided to protect important tape if a trouble occurs on the complex mechanism and the electrical circuits.
For this purpose, status of each part of the mechanism is always monitored with various sensor switches, and the microcomputer controls collectively the unit so that the best condition is kept.
Moreover, the microcomputer controls signal switchings for each circuit according to the mechanism status.

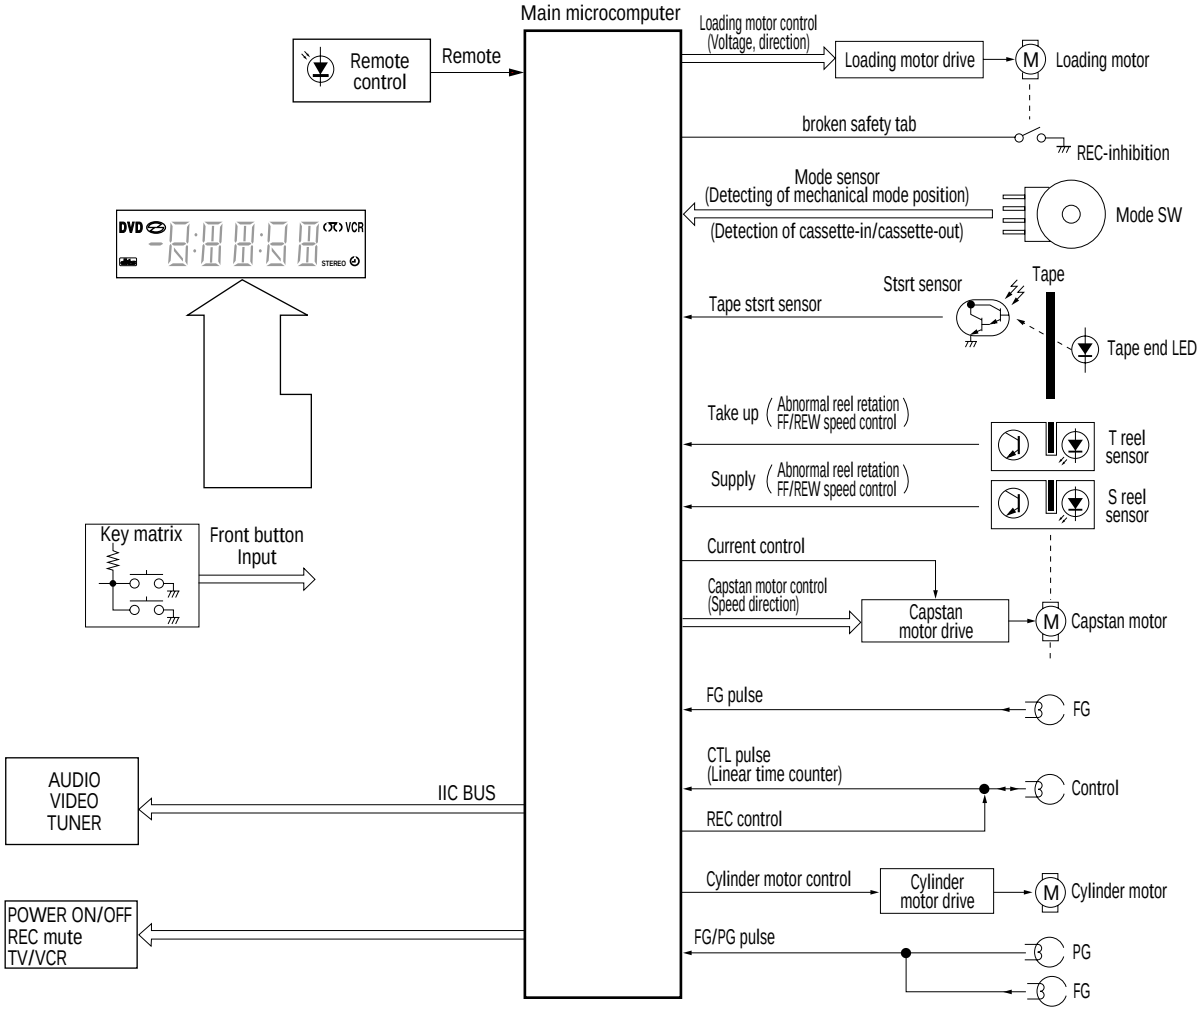

Fig. 8-11 System Control Block Diagram

8-6 System Control and Mechanical Operations

8-6-1 Mechanical Operation

The operation of mechanism is performed by rotation of the loading motor, and the transmission path of the operation is as shown in Fig. 8-12.

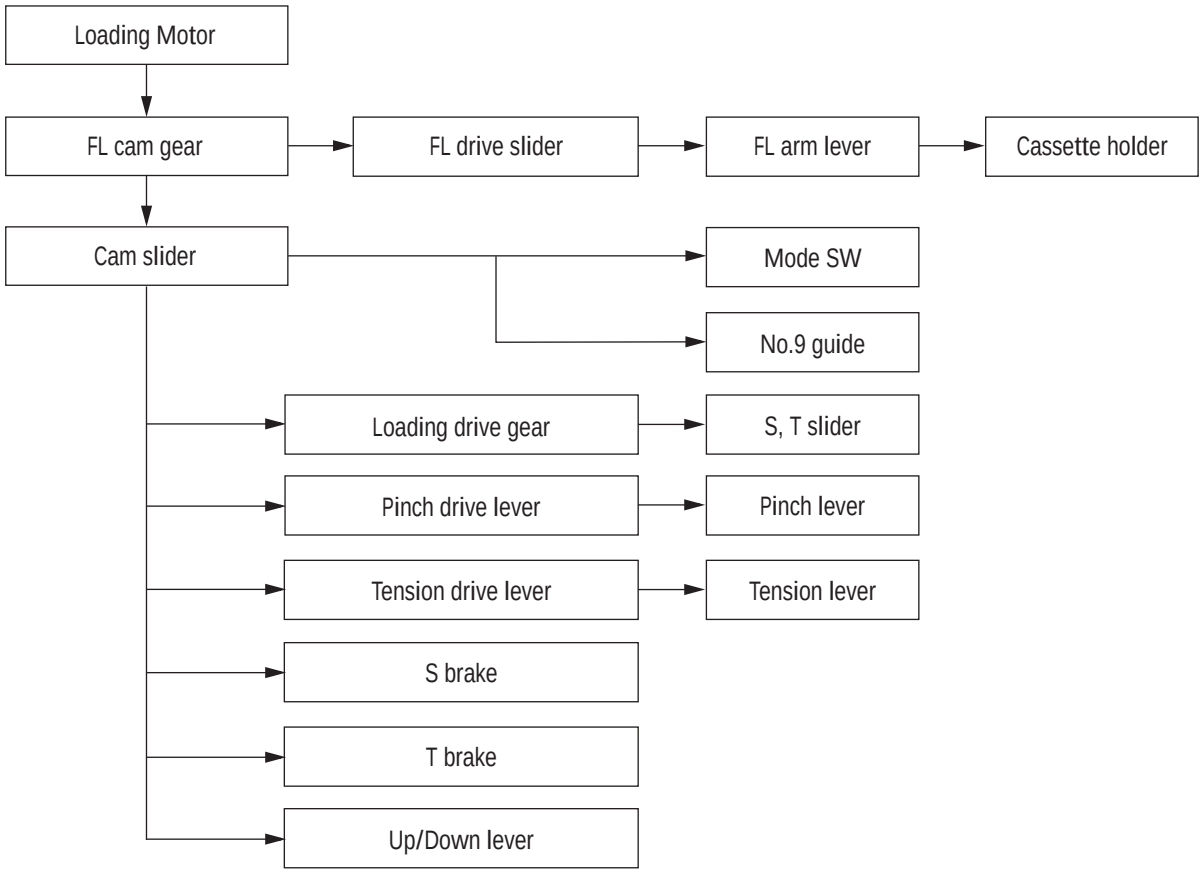

Fig. 8-12 Transmission Path of Operation

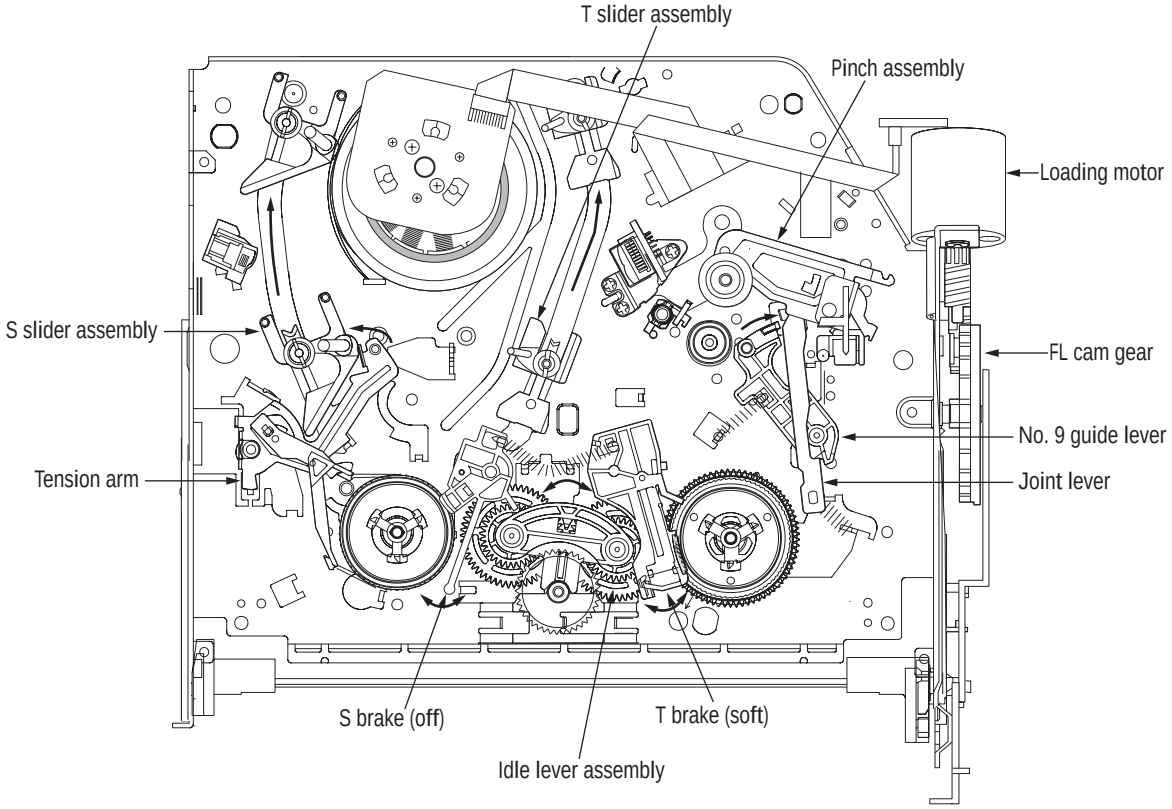
Fig. 8-14 shows each mode and mechanism status in each mode concerned with the rotation of the FL cam gear or cam slider shift. The mechanism operates as shown in Fig. 8-13 according to the timing chart in Fig. 8-14.

Note :
The Start Sensor is actuated by the horizontal moving of Slider FL Drive and turned on or off by insertion or ejection of a cassette.

<Top View>



<Bottom View>

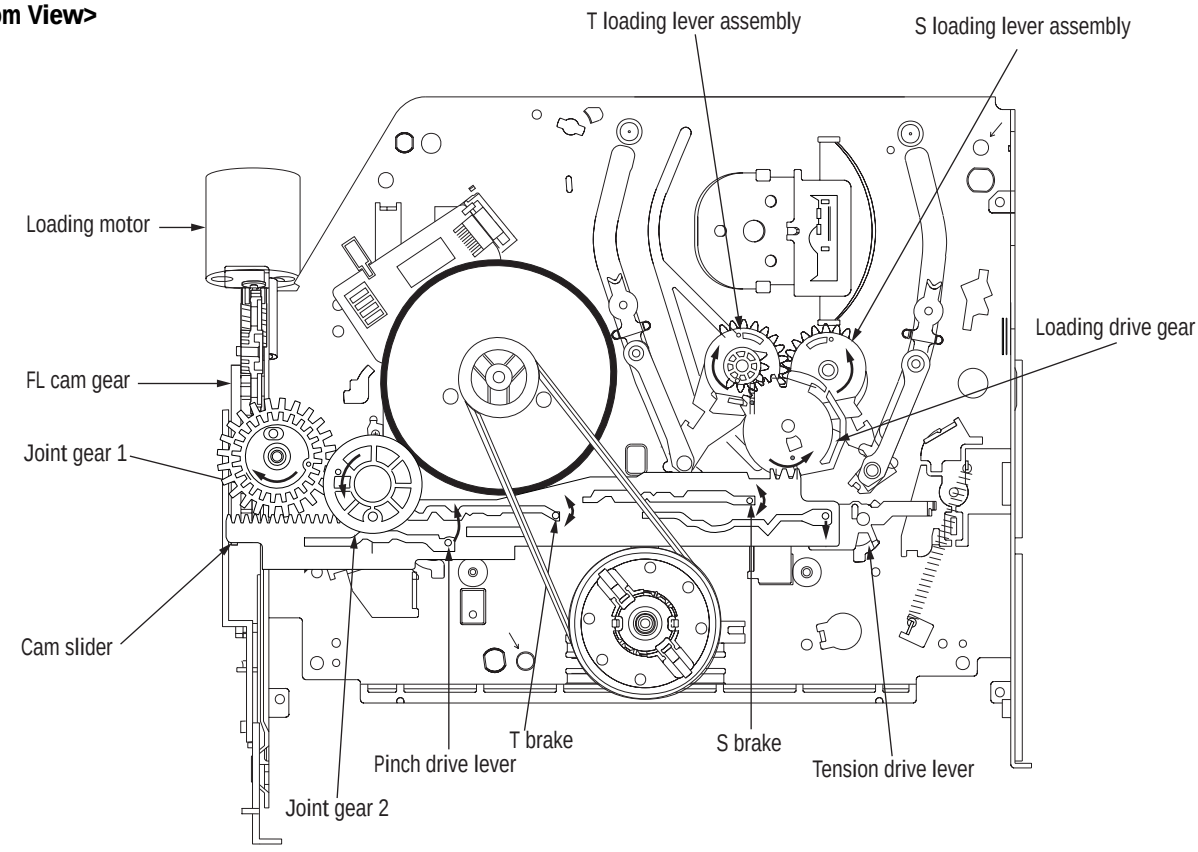


Fig. 8-13 Mechanical Operation

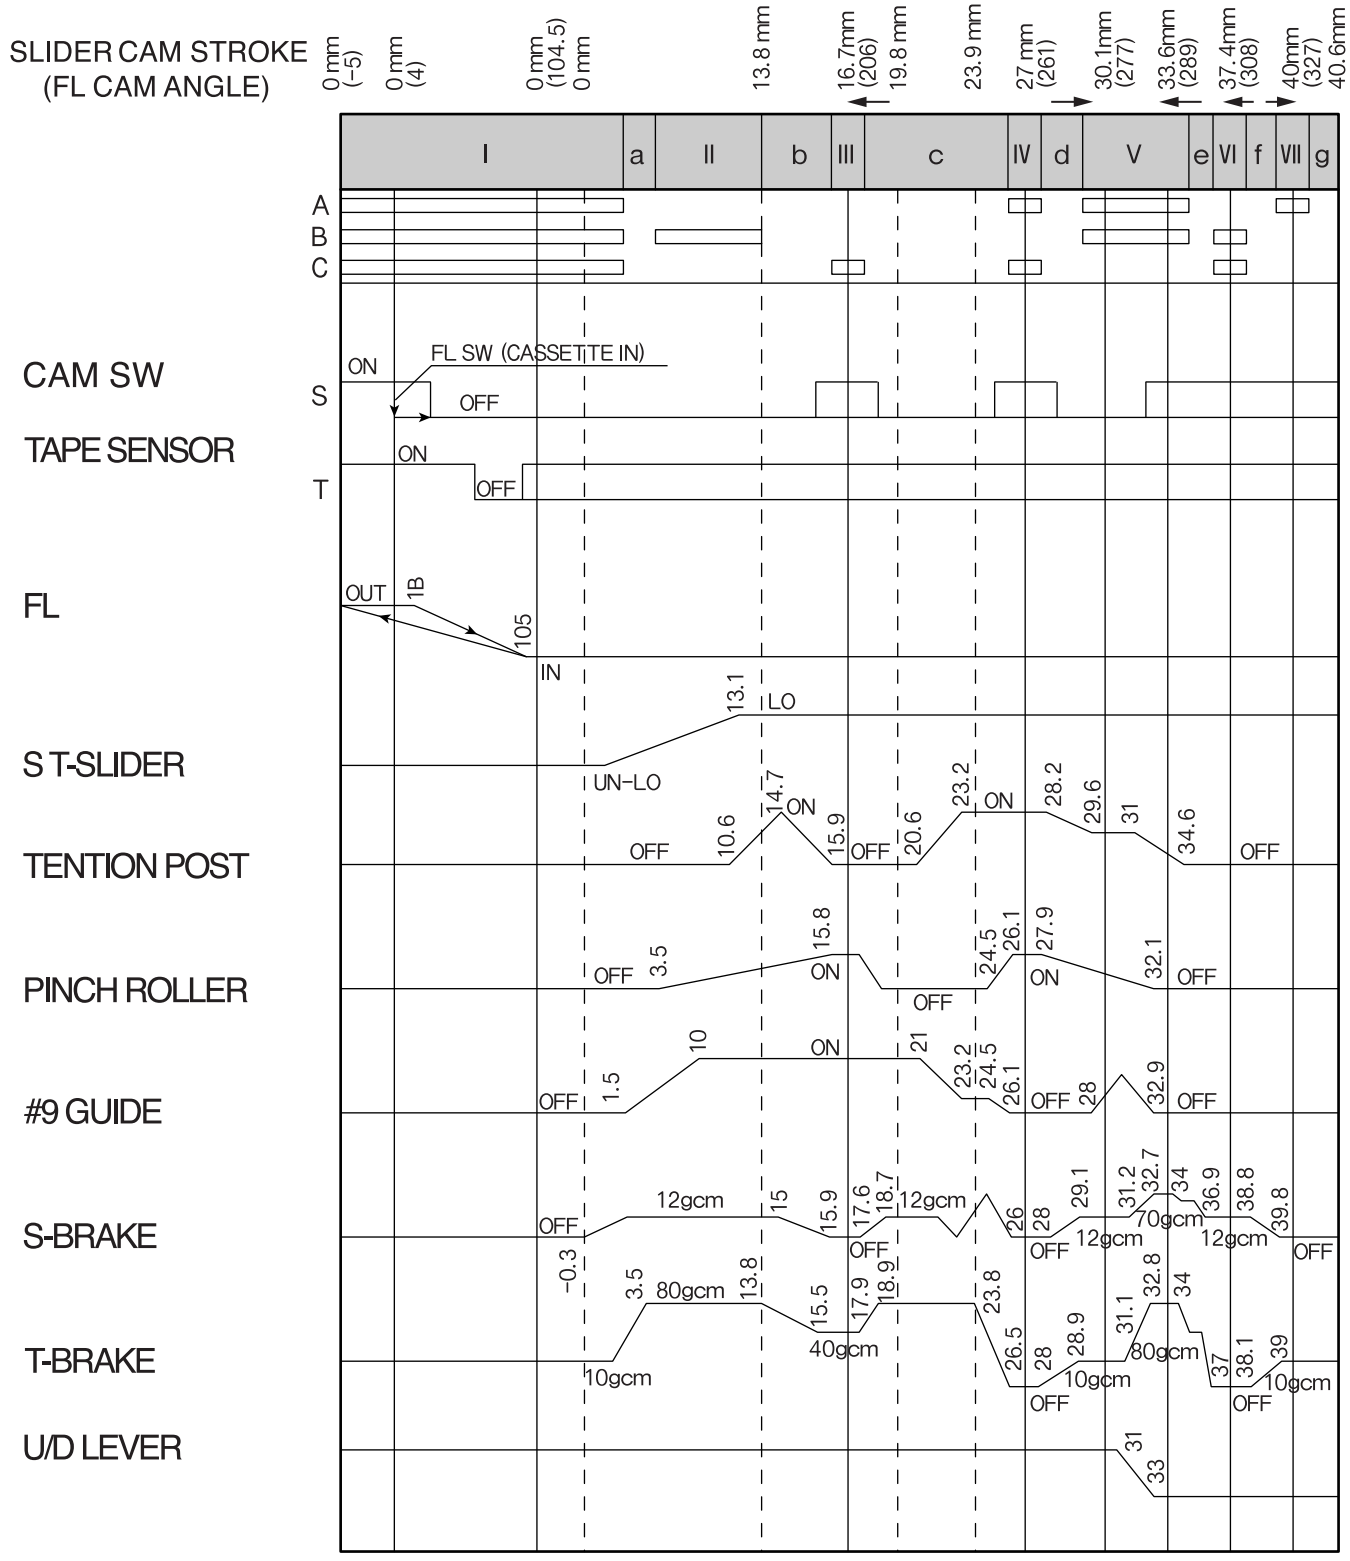

Fig. 8-14 Mecha Timing Chart

(1) There are two STOP modes and two FF/REW modes.

1) STOP 1
This mode is performed when PB and FF/REW is not done for 5 miniute at power on.
The small load is given to S REEL DISC and T REEL DISC. And the cylinder motor is stopped.

2) STOP 2
This mode is performed when you press the stop button as performing FF/REW.
The large load is given to S REEL DISC and T REEL DISC.

3) FF/REW 1
This mode is performed when
❶ The tape load is small during performing FF and reducing speed.
❷ The tape load is large during performing REW.
The small load is given to S REEL DISK and no load is given to T REEL DISC.

4) FF/REW 2
This mode is performed when
❶ The tape load is large during performing FF.
❷ The tape load is small during performing REW and reducing speed
No load is given to S REEL DISK and the small load is given to T REEL DISK.

(Cf) According to acceleration, deceleration, and the location of tape, tension control which is caused by converting FF/REW 1 and FF/REW 2 each other is performed during FF or REW.

(2) The condition of S Brake and T Brake at each mode.

< S BRAKE>

1) OFF BRAKE (Unloading completion, RPS, PLAY, FF/REW 2)
- S BRAKE is detached from S REEL DISC completely. So S REEL DISC is free.

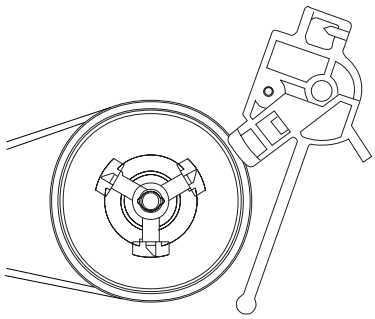

Fig. 8-15

2) SOFT BRAKE(during LOADING, STOP 1, FF/REW 1)
- The small load is given to S REEL DISC.

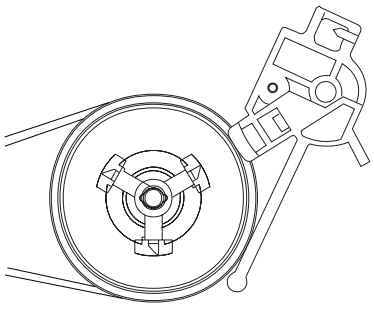

Fig. 8-16

3) MAIN BRAKE (STOP 2)
- The large load is given to S REEL DISC.

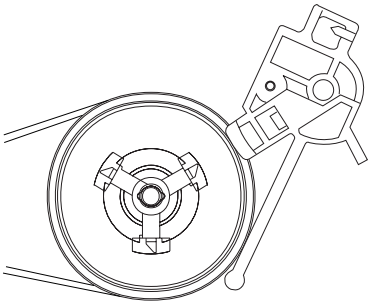

Fig. 8-17

< T BRAKE>
1) OFF BRAKE (PLAY, FF/REW 1)
- T BRAKE is detached from T REEL DISC completely. So T REEL DISC is free.

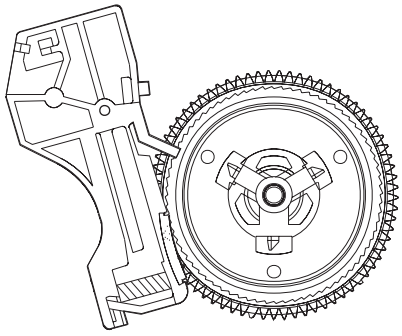

Fig. 8-18

2) SOFT BRAKE (UNLOADING Completion ,STOP 1, FF/REW 2)
- The small load is given to T REEL DISC.

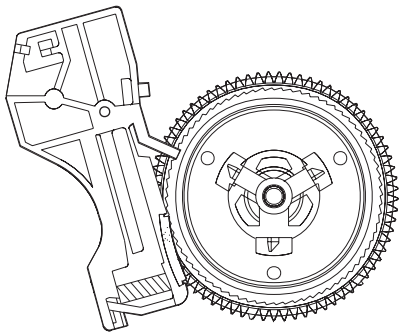

Fig. 8-19

3) REVERSE SEARCH BRAKE (RPS)
- The medium load is given to T REEL DISC.

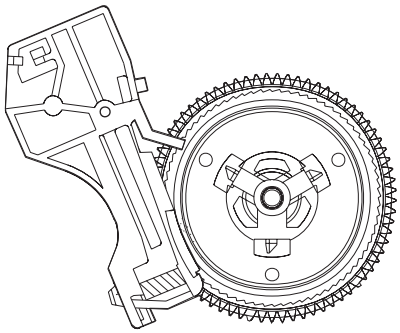

Fig. 8-20

4) MAIN BRAKE (on the loading, STOP 2)
- The large load is given to T REEL

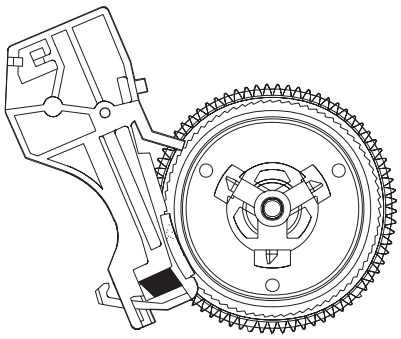

Fig. 8-21

8-6-2 Mode Sensor Drive

The mode sensor converts each mode of the mechanism into an electrical signal and transmits it to the microcomputer. The FL cam gear is rotated by the loading motor, and the cam slider slides after operation of the cassette holder.
Then the mode switch also rotates synchronized with the cam slider and outputs a signal corresponding to each mode. This signal is transmitted to the microcomputer and the microcomputer stops the cam slider at a specified angle, thus establishing each mode.
The IC601 controls Capstan Motor Drive IC for each mode to make the loading motor rotate in forward or reverse direction, thereby setting the mechanism at a specified position.
The mode switch develops three outputs A, B and C.
The circuit configuration of the mode sensor drive is shown in Fig. 8-22.

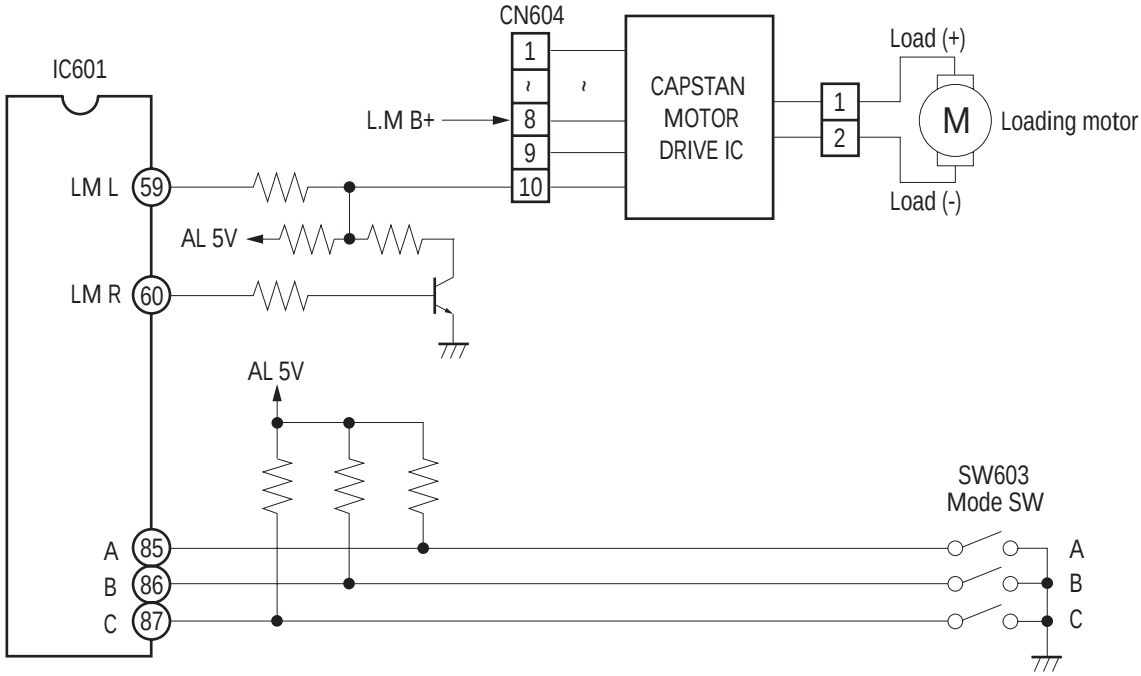

Fig. 8-22 Mode Sensor Drive

8-6-3 Operations in Each Mode

[1] Cassette loading & Tape loading mode

<Cassette loading>

(1) The FL cam gear is in the Cassette unloading (position I)position, and the cassette holder is in the out status (start sensor ON). Under this condition, each motor is stopped.

(2) Status of the mechanism is as follows.
   1) S.T guide rollers, tension post, No.9 guide are in unloading status and housed in the reel disc side.
   2) S brake is released and T brake is in soft brake status.
   3) The clutch holder assembly is in clutched status and idle lever assembly is enabled to be engaged with both S and T reel discs.

(3) When a cassette is inserted, the lock lever of cassette holder is released from the stopper, the cassette holder moves, the FL arm lever rotates, and the FL Drive Slider slides, thereby closing the start sensor.

(4) IC601 controls Capstan Motor Drive IC to rotate the loading motor in forward direction, and move the cassette holder. At the same time, the capstan motor rotates in the reverse direction and moves the cassette down (vertical motion) while rotating the S reel disc.

(5) The cassette lid opens when the vertical motion starts.

(6) When the vertical motion has completed and the cassette is mounted, the capstan motor rotates in the reverse direction. At that time the position “a” is detected with the cam slider shifted and the loading / capstan motors are stopped. After 300msec the loading motor rotates in the forward direction and enters the tape loading operation.

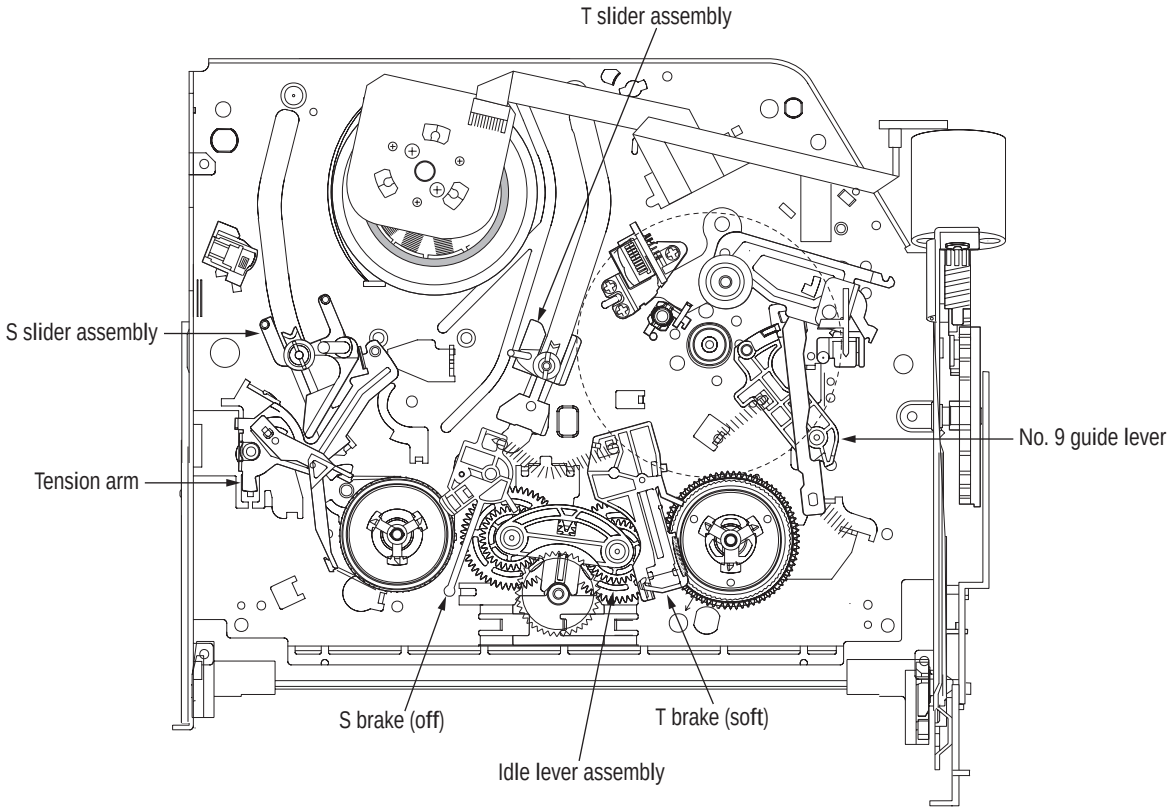

Fig. 8-23 Cassette-Loading Mode (Position I)

<Tape loading>

(1) After slot-in operation (cassette loading), FL cam gear rotates and the cam slider starts shifting, and a loading gear is ready to start.
Under this condition, the mechanism status is as follows :
1) The T main brake actuates so that tape does not com out from the T reel during the loading operation.
(2) The cylinder starts to rotates after the loading motor is rotated.
(3) When the cam slider reaches the position II (loading / unloading modes), the mechanism enters the loading status and operates as described below.
1) S,T sliders are moved through the loading drive gear and trun on the tension post.
2) The No. 9 guide is loaded.
3) The pinch roller is loaded up to front of the capstan.
4) The head cleaner is actuated during loading operation.
5) The S soft brake is actuated.
(4) When the cam slider passes through the position III, and detects the position IV (playback standby mode), the loading motor stops. Under this condition, the mechanism status is described as below :
❶ The pinch roller is pressed to the capstan.
❷ The No.9 guide is stored in the cassette.
❸ The tension post touches the tape, band brake force is applied, and the tension servo brake mechanism actuates.
❹ Brakes for the reel discs are all off.

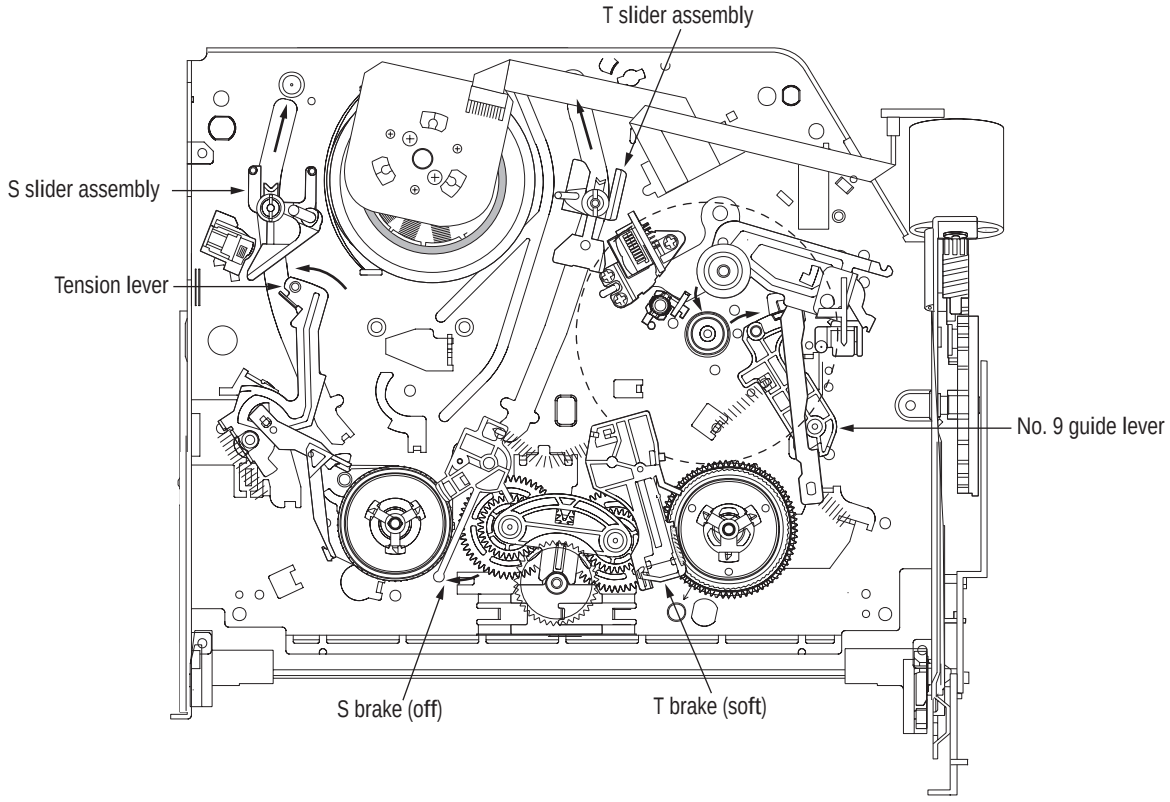

Fig. 8-24 Tape Loading Operation (Position II)

<Playback Stand-by (Stop) mode>

(1) The tape loading operation completes and the loading motor stops.
(2) In the same way as in the playback mode, the capstan motor rotates in forward direction and the T reel disc takes up the tape. (For more details, refer to the playback mode.)
(3) After running the tape for 0.6s, the mechanism rotates the capstan in the reverse direction for 0.3s to slack the tape properly with pinch roller pressed.
(4) If nothing is operated for about 5 minutes, the loading motor rotates in the forward direction and the cam position reaches the position V, and both the loading motor and the cylinder motor stop.
(5) During this period, the video and audio systems are in the same status as in the stop mode.

[2] Tape unloading & Cassette unloading

<Tape Unloading>

(1) When the [EJECT] button is pressed in the stop mode, the mechanism enters the eject mode.
(2) IC601 controls cylinder motor drive IC to make the cylinder motor rotates.
(3) IC601 makes the loading motor rotate in the reverse direction, and shifts the cam slider.
    1) The mechanism components move in the reverse direction against the loading operation.
(4) When the cam slider reaches the position II, IC601 makes the capstan motor rotate in the reverse direction (LP X11) and takes up the tape at a specified torque using the clutch mechanism.
(5) When the cam slider reaches the position I, it brakes the capstan motor to stop, and then stops the loading motor after 230ms passed.

<Cassette unloading>

(1) Furthermore, IC601 makes the loading motor rotate in the reverse direction and also the capstan motor in reverse direction, applies braking force to the capstan motor by detecting the tape start sensor OFF --> ON, and the capstan motor stops.
(2) IC601 makes the loading motor stop after 150ms passed from sensing “ON”.
(3) Also IC601 makes the loading motor rotate in the forward direction after 120ms passed.

[3] Stop mode

(1) The cam slider is in the stop mode (position V) and each motor stops.
(2) The mechanism status is as follows :
1) The S, T guide rollers are in the loading status.
2) The pinch roller is kept away from the capstan.
3) The tension post is shifted to the reel disc side. That is, the band brake is released from the ON status and the back tension is also released.
4) The S, T soft brakes are being applied.

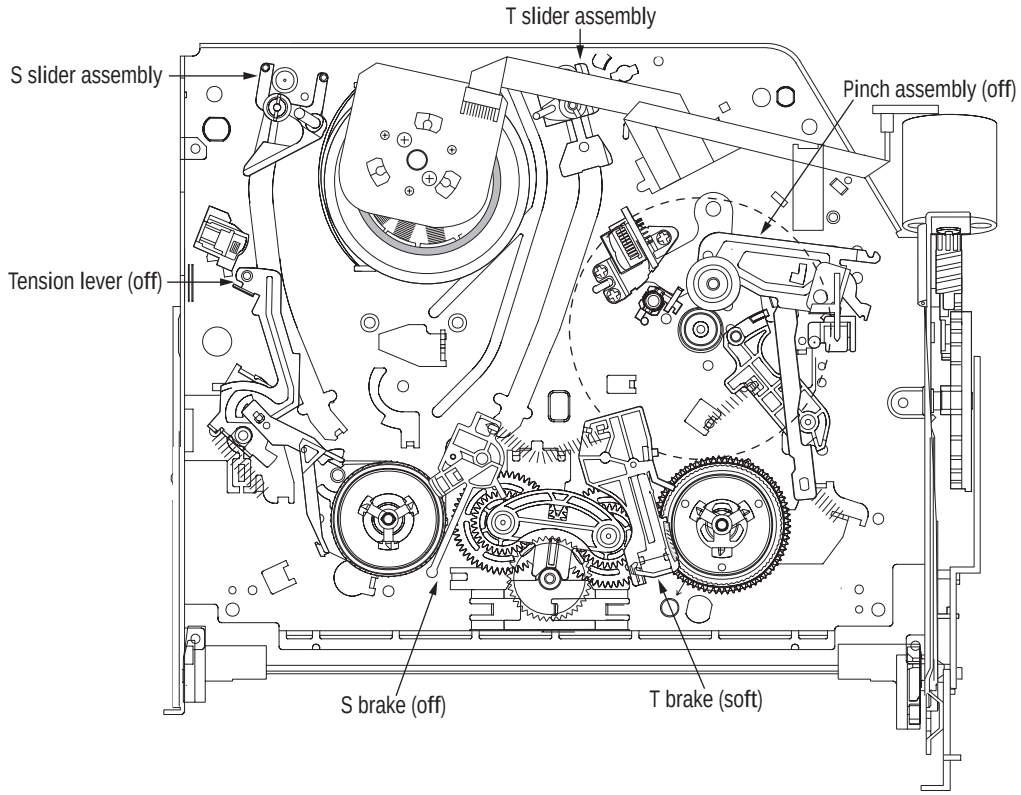

Fig. 8-25 Stop Mode (Position V)

[4] FF/REW mode

(1) When the [REW] button is pressed in playback standby mode, the mode enters the FF/REW mode.
(2) IC601 controls Capstan Motor Drive IC and makes the loading motor rotate in the forward direction.
The loading motor stops when the cam position reaches the position VI, VII (FF/REW mode).
The mechanism status is as follows :
1) The pinch roller is OFF.
2) The No. 9 guide is once loaded but immediately returned.
3) The tension post is moved to the reel disc side. That is, the band brake is released from the ON status and the back tension is released.
4) The clutch holder assembly is in the direct status and the capstan driving force is directly transmitted to the reel disc.
5) Brakes for the reel discs are as follows :
❶ VI position FF/REW 1 mode (S Brake : soft brake, T Brake : off)
❷ VII position FF/REW 2 mode (S Brake : off, T Brake : soft brake)
(3) IC601 makes the capstan motor rotate in the forward direction and the idle gear transmits the rotation to the S/T reel discs to take up the tape.

[5] FF/REW to STOP mode

(1) When the [STOP] button is pressed in the REW mode, the mechanism enters the playback standby mode.
(2) IC601 makes the loading motor rotate in the reverse direction and stops at the position V.
With this mode shift, the mechanism actuates S, T main brakes to stop the tape. Then, the capstan motor also stops by braking force 70ms after detecting “e” position.
(3) IC601 makes the loading motor rotate in the reverse direction again and stops the loading motor when the cam slider reaches the position IV (playback mode), thus setting the playback standby mode.

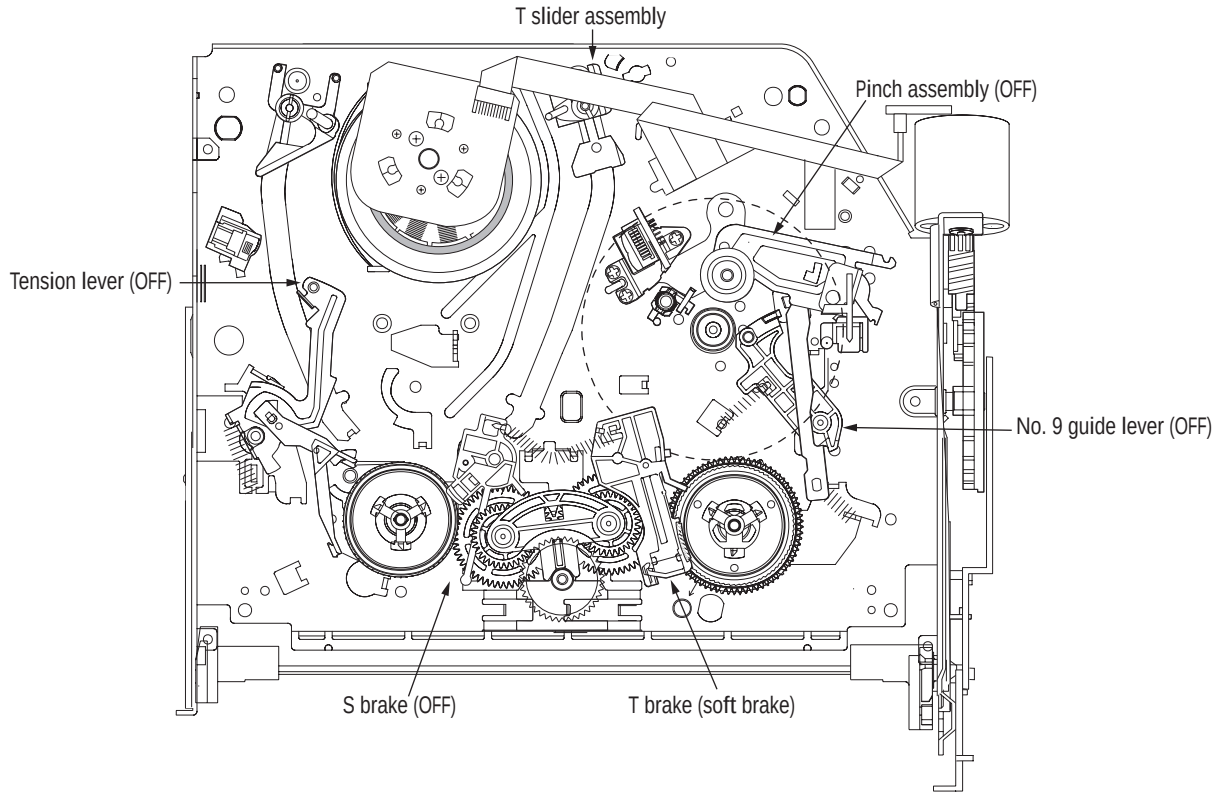

Fig. 8-26 FF/REW 2 Mode (Position VII)

[Playback mode]

(1) When the [PLAY] button is pressed in the stop mode, the mechanism enters the playback mode.
(2) IC601 controls cylinder motor drive IC and rotates the cylinder motor.
(3) IC601 controls Capstan Motor Drive IC to rotate the loading motor in the reverse direction and stops the motor when the cam slider reaches the position IV (playback mode). (When operating from the playback standby mode, the cam slider has been already on the position IV.) The mechanism works as follows :
  1) The pinch roller moves toward the capstan side and press fits the capstan.
  2) The No.9 guide is loaded once and then returned immediately.
  3) The tension post touches the tape, the band braking force is applied, and the tension servo mechanism works.
  4) The clutch holder assembly enters clutched condition.
  5) S,T brakes are released.
(4) IC601 makes the capstan rotate in the forward direction and feeds the tape. The idle gear transmits the rotation to the T reel disc and the reel disc takes up the tape at a constant torque by the clutch mechanism.
(5) IC601 controls the video circuit and switches the playback screen.
(6) The recording speed data identified by IC601 is displayed in the Led module.

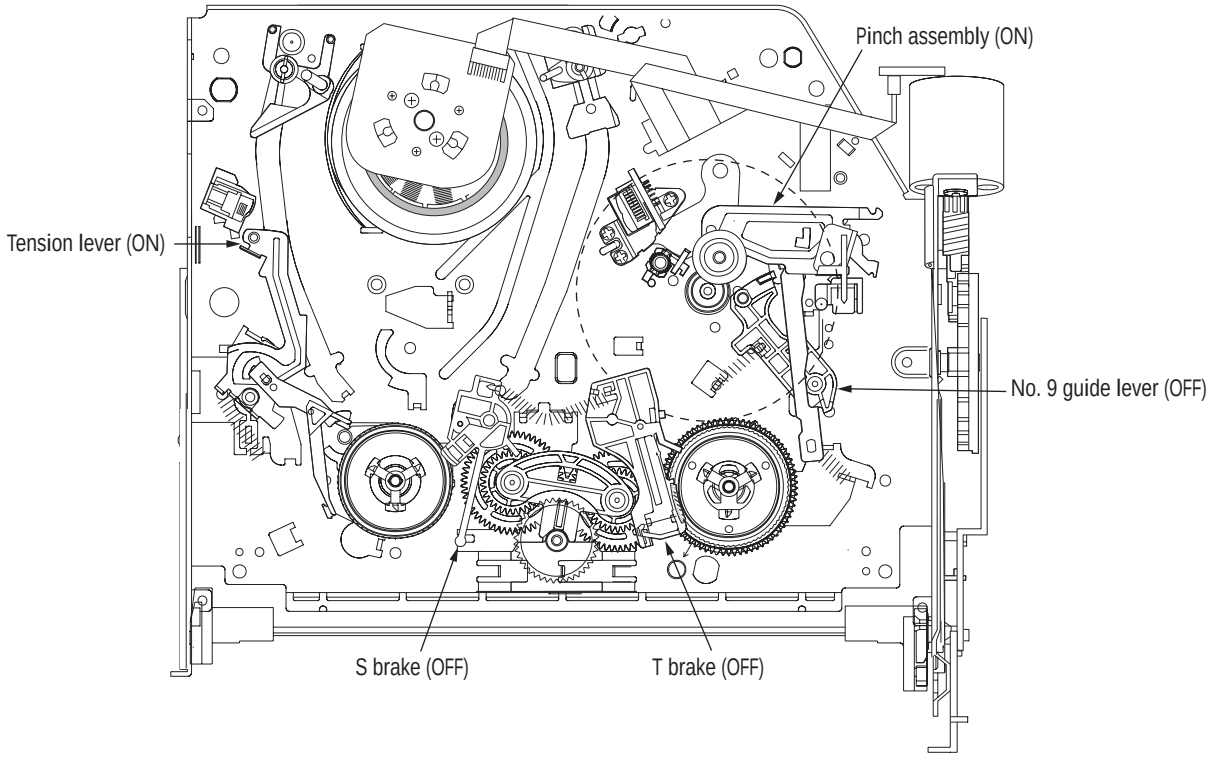

Fig. 8-27 Playback Mode (Position IV)

<Still mode>

(1) When the [PAUSE] button is pressed in the playback mode, the mechanism enters the still mode.
The cam slider is in the position IV (playback mode), the cylinder motor is rotating, and the capstan motor is rotating in the forward direction.
(2) IC 601 controls the audio circuit and actuates the audio mute function.
(3) The capstan motor enters the intermittent operation mode and then stops.
(4) IC 601 maintains the recording speed data just before the still operation.
(5) In the slow mode, the capstan motor rotates continuously in the intermittent driving.

<FPS mode>

(1) When the [FF] button is pressed in the playback mode, the mechanism enters the FPS mode (forward picture search). The cam slider is in the position IV (playback mode), the cylinder motor is rotating, and the capstan motor is rotating in the forward direction.
(2) IC 601 controls the audio circuit to actuate the audio mute operation.
(3) IC601 makes the capstan rotate at 7 times for SP, 21 times for SLP to feed the tape, respectively.
The tape is taken up at a constant torque by the clutch mechanism. (The mechanical operation is the same as that in the playback mode.)
(4) The recording speed data identified by IC601 is displayed on the Led module.

<RPS mode>

(1) When the [REW] button is pressed in the playback mode, the mechanism enters the RPS mode.
The cam slider is in the position IV (playback mode), the cylinder motor is rotating, and the capstan motor is rotating in the forward direction.
(2) IC601 controls the audio circuit to actuate the audio mute operation.
(3) IC601 controls Capstan Motor Drive IC to make the loading motor rotate in the reverse direction.
After 180ms the loading motor stops for 250ms. During the mode shift operation, the mechanism rotates the capstan motor in the forward direction for a constant time so that the tape is not slackened.
(4) When the cam slider reaches the position "c" (loading motor stoped for 250ms), the capstan motor is rotated in the reverse direction for a constant time, and the idle gear is swung toward the S reel disc side.
Then, the loading motor rotates in reverse direction and shifts to the position III (RPS mode).
When the cam slider reaches the position III (RPS mode), the loading motor stops.
The mechanism status is as follows :
1) The No.9 guide is loaded.
2) The tension post is separated from the tape.
3) The T soft brake is turned on.
The cpastan motor rotates in the reverse direction at 7 times for SP, 21 times for SLP to feed the tape in the REW direction, respectively. At the same time, the idle gear transmits the rotation to the S reel disc and the S reel disc takes up the tape by the clutch mechanism.
(5) The recording speed data identified by IC601 is displayed on the Led module.

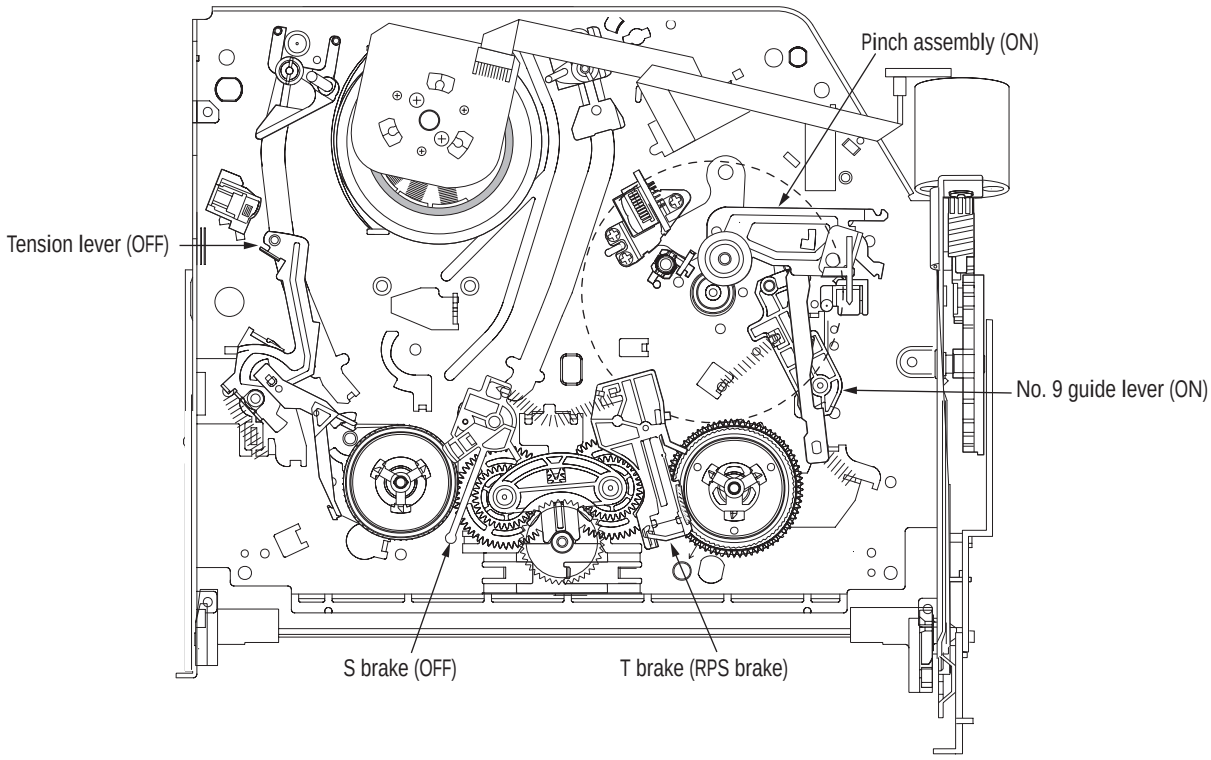

Fig. 8-28 RPS Mode (Position III)

[7] REC mode

<REC mode>

(1) When the [REC] button is pressed in the stop mode, the mechanism enters the REC mode.
(2) The cylinder motor starts and then the loading motor rotates in reverse direction.
The cam slider reaches the position IV (playback mode).
The tape is taken up at a constant torque. The mechanism operations are the same as those in the playback.
(3) IC601 controls the audio circuit and video circuit to set the record enable mode.
(4) Recording mute is released, thus setting the recording status. The CTL signal is output for recording.

<REC PAUSE mode>

(1) When [PAUSE] button is pressed in the REC mode, the mechanism enters the REC pause mode.
(2) IC601 controls the audio circuit and the video circuit, and releases the record enable mode and performs the rewinding for synchronous editing.
(3) After completion of the rewinding for synchronous editing, the cam slider is in the position IV (playback mode), the cylinder motor is rotating, and the capstan motor and the loading motor stop.

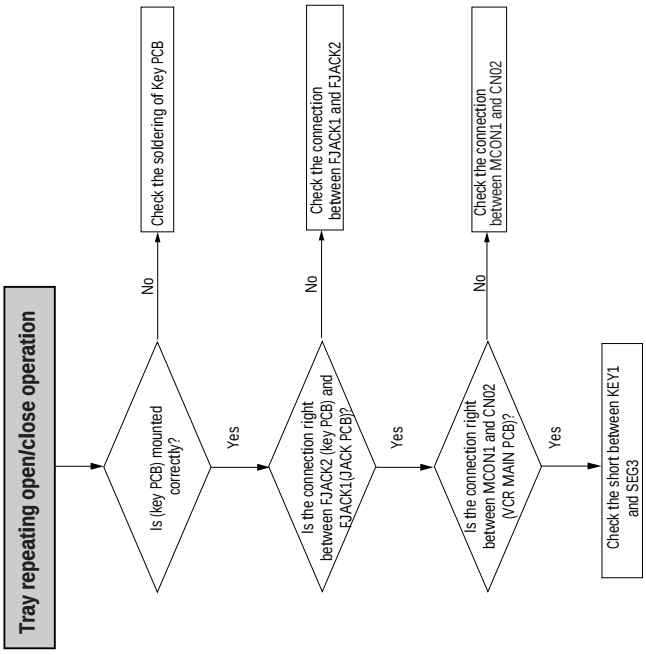
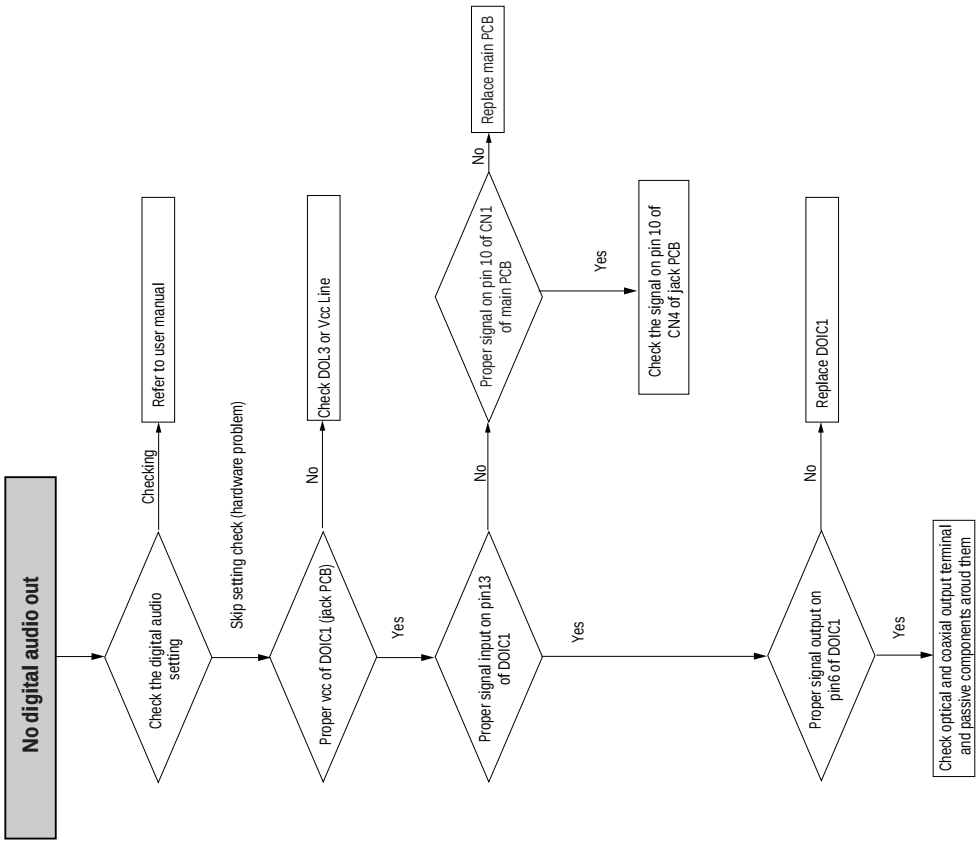
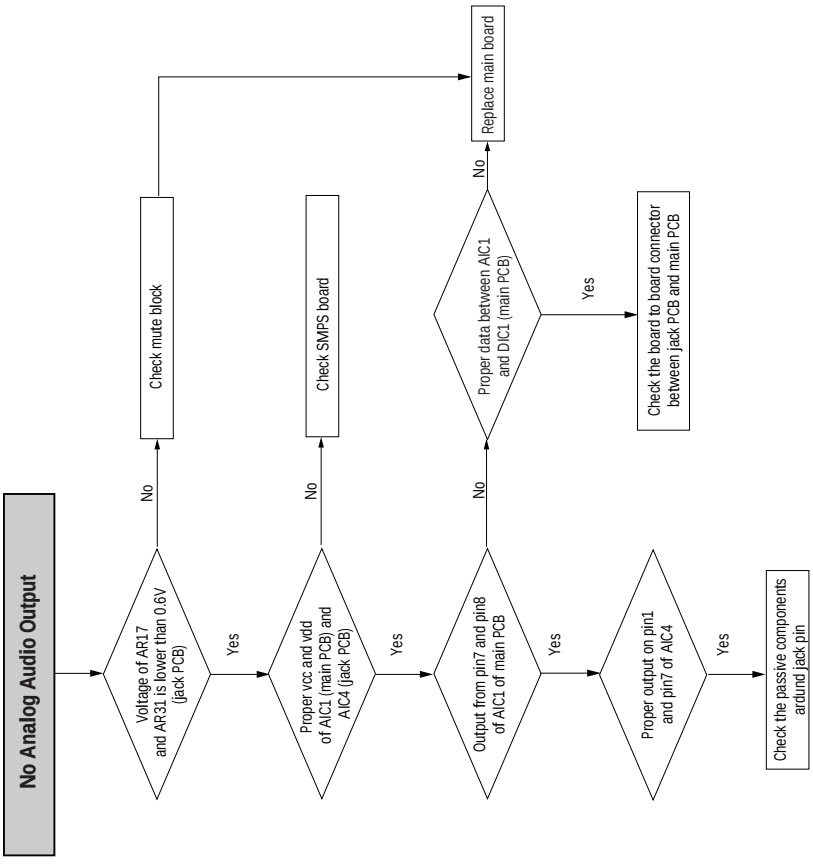
Disc loading error
Are main and deck power OK?
No
Check the power
Yes
Is the 40pin FFC cable (between main & deck) inserted correctly?
No
Reinsert FFC cable correctly
Yes
Is the wavefrom of DIC3 pin26 normal? (main PCB)
No
Change the deck
Yes
Change the main board



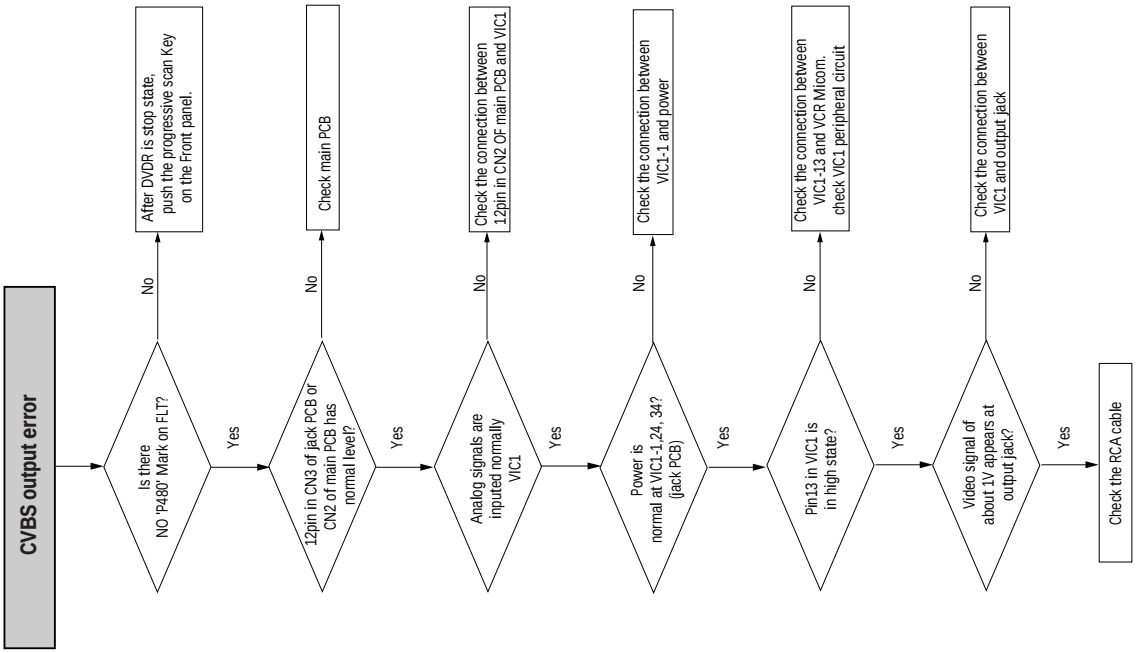
Tray repeating open/close operation
Is (key PCB) mounted correctly?
No
Check the soldering of Key PCB
Yes
Is the connection right between FJACK2 (key PCB) and FJACK1(JACK PCB)?
No
Check the connection between FJACK1 and FJACK2
Yes
Is the connection right between MCON1 and CN02 (VCR MAIN PCB)?
No
Check the connection between MCON1 and CN02
Yes
Check the short between KEY1 and SEG3



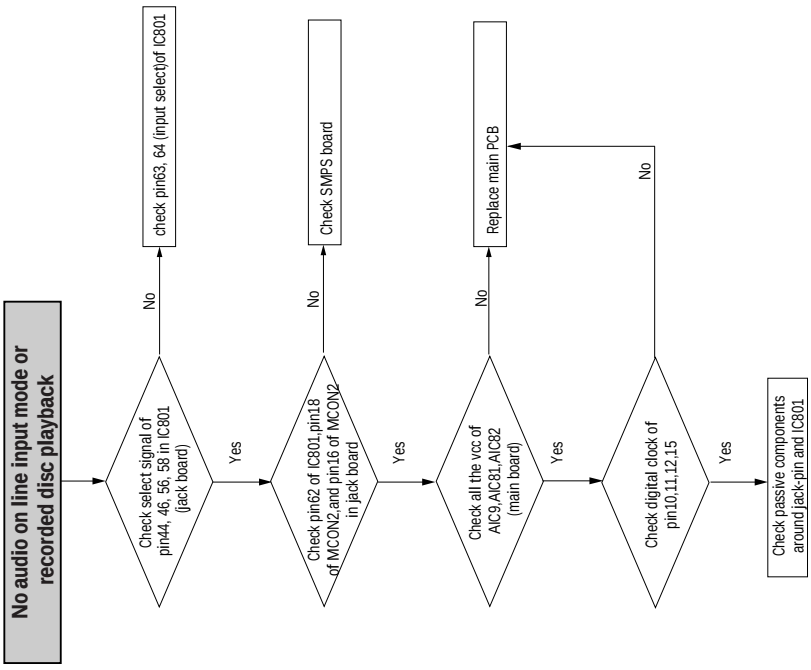
No digital audio out
Check the digital audio setting
Checking
Refer to user manual
Skip setting check (hardware problem)
Proper vcc of DOIC1 (jack PCB)
No
Check DOL3 or Vcc Line
Yes
Proper signal input on pin13 of DOIC1
No
Proper signal on pin 10 of CN1 of main PCB
No
Replace main PCB
Yes
Check the signal on pin 10 of CN4 of jack PCB
Yes
Proper signal output on pin6 of DOIC1
No
Replace DOIC1
Yes
Check optical and coaxial output terminal and passive components aroud them



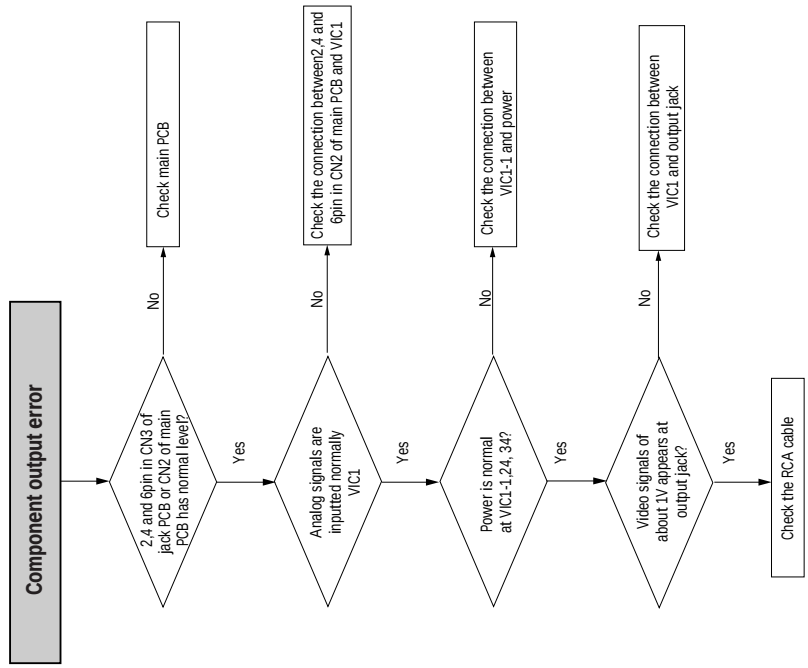
No Analog Audio Output
Voltage of AR17 and AR31 is lower than 0.6V (jack PCB)
No
Check mute block
Replace main board
Yes
Proper vcc and vdd of AIC1 (main PCB) and AIC4 (jack PCB)
No
Check SMPS board
Yes
Output from pin7 and pin8 of AIC1 of main PCB
No
Proper data between AIC1 and DIC1 (main PCB)
No
Replace main board
Yes
Check the board to board connector between jack PCB and main PCB
Yes
Proper output on pin1 and pin7 of AIC4
Yes
Check the passive components ardund jack pin



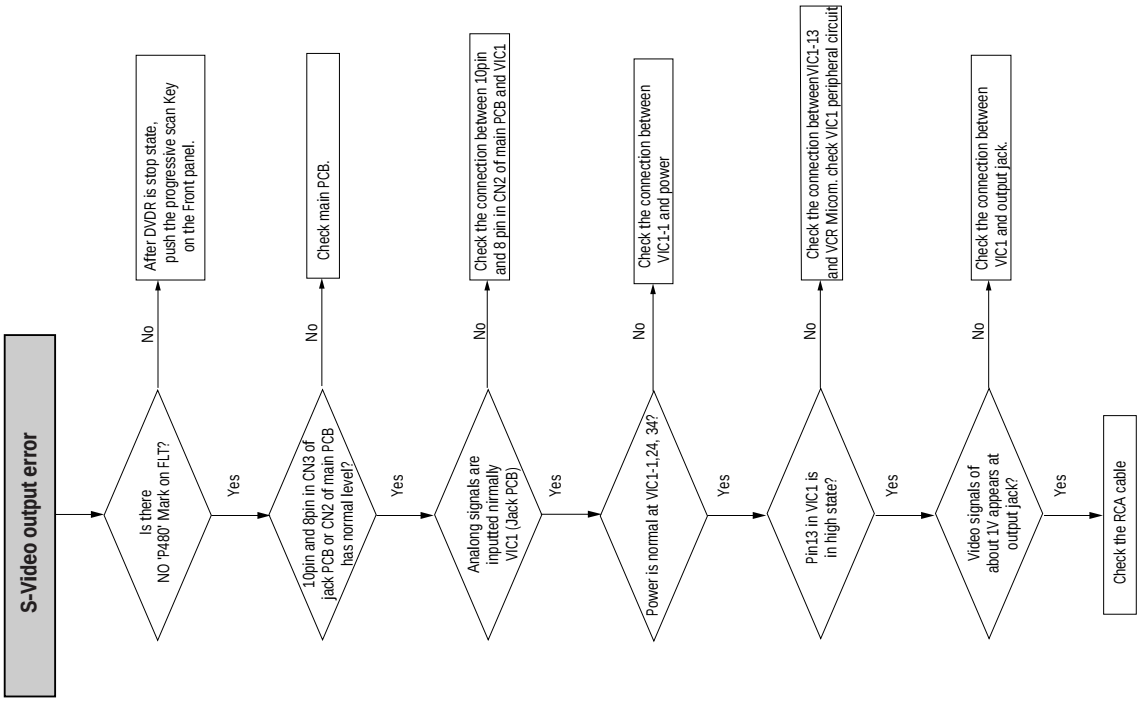
CVBS output error
Is there NO "P480" Mark on FLT?
No
After DVDR is stop state, push the progressive scan Key on the Front panel.
Yes
12pin in CN3 of jack PCB or CN2 of main PCB has normal level?
No
Check main PCB
Yes
Analog signals are inputed normally VIC1
No
Check the connection between 12pin in CN2 OF main PCB and VIC1
Yes
Power is normal at VIC1-1,24, 34? (jack PCB)
No
Check the connection between VIC1-1 and power
Yes
Pin13 in VIC1 is in high state?
No
Check the connection between VIC1 -13 and VCR Mcom. check VIC1 peripheral circuit
Yes
Video signal of about 1V appears at output jack?
No
Check the connection between VIC1 and output jack
Yes
Check the RCA cable



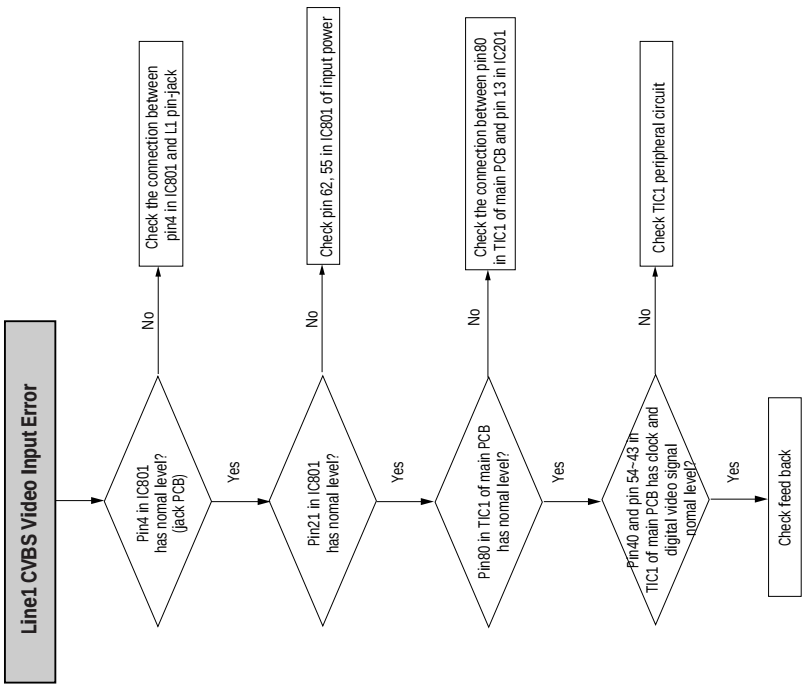
No audio on line input mode or recorded disc playback
Check select signal of pin44, 46, 56, 58 in IC801 (jack board)
No
check pin63, 64 (input selectjof IC801
Yes
Check pin62 of IC801,pin18 of MCON2,and pin16 of MCON2 in jack board
No
Check SMPS board
Yes
Check all the vcc of AIC9,AIC81,AIC82 (main board)
No
Replace main PCB
Yes
Check digital clock of pin10,11,12,15
No
Yes
Check passive components around jack-pin and IC801



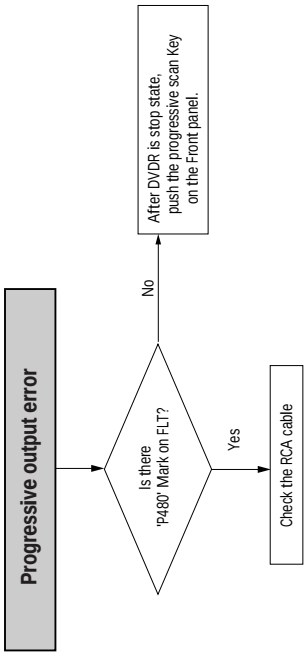
Component output error
2,4 and 6pin in CN3 of jack PCB or CN2 of main PCB has normal level?
No
Check main PCB
Yes
Analog signals are inputted normally VIC1
No
Check the connection between2,4 and 6pin in CN2 of main PCB and VIC1
Yes
Power is normal at VIC1-1,2,4, 34?
No
Check the connection between VIC1-1 and power
Yes
Video signals of about 1V appears at output jack?
No
Check the connection between VIC1 and output jack
Yes
Check the RCA cable



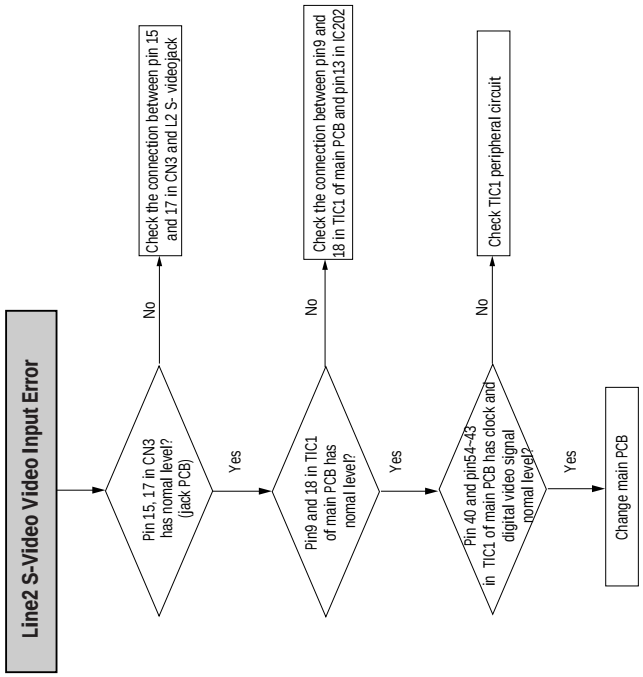
S-Video output error
Is there NO P480' Mark on FLT?
No
After DVDR is stop state, push the progressive scan Key on the Front panel.
Yes
10pin and 8pin in CN3 of jack PCB or CN2 of main PCB has normal level?
No
Check main PCB.
Yes
Analong signals are inputted nirmally VIC1 (Jack PCB)
No
Check the connection between 10pin and 8 pin in CN2 of main PCB and VIC1
Yes
Power is normal at VIC1-1,24, 34?
No
Check the connection between VIC1-1 and power
Yes
Pin13 in VIC1 is in high state?
No
Check the connection betweenVIC1-13 and VCR Micom. check VIC1 peripheral circuit
Yes
Video signals of about 1V appears at output jack?
No
Check the connection between VIC1 and output jack.
Yes
Check the RCA cable



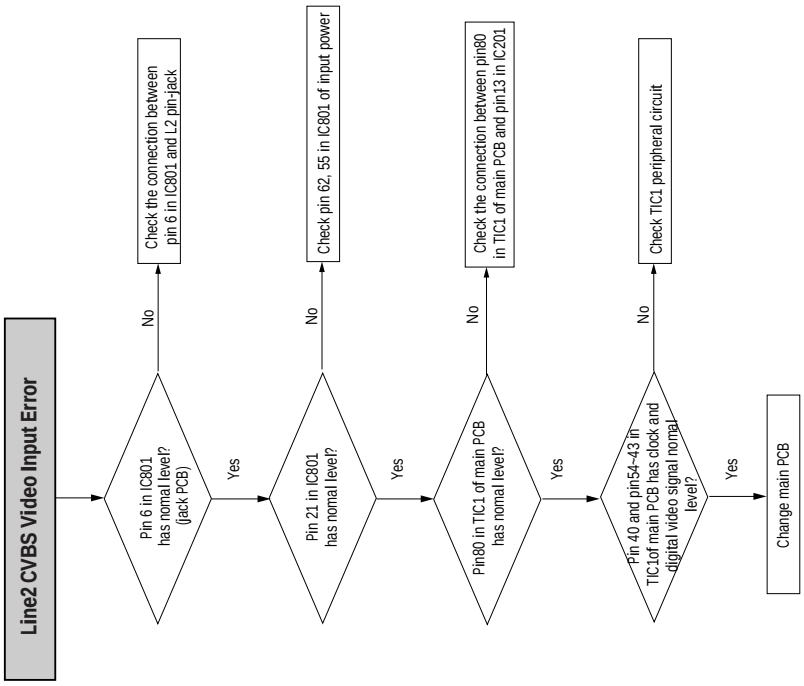
Line1 CVBS Video Input Error
Pin4 in IC801 has nomal level? (jack PCB)
No
Check the connection between pin4 in IC801 and L1 pin-jack
Yes
Pin21 in IC801 has nomal level?
No
Check pin 62, 55 in IC801 of input power
Yes
Pin80 in TIC1 of main PCB has nomal level?
No
Check the connection between pin80 in TIC1 of main PCB and pin 13 in IC201
Yes
Pin40 and pin 54~43 in TIC1 of main PCB has clock and digital video signal nomal level?
No
Check TIC1 peripheral circuit
Yes
Check feed back



Progressive output error
Is there "P480" Mark on FLT?
No
After DVDR is stop state, push the progressive scan Key on the Front panel.
Yes
Check the RCA cable



Line2 S-Video Video Input Error
Pin 15, 17 in CN3 has nomal level? (jack PCB)
No
Check the connection between pin 15 and 17 in CN3 and L2 S- videojack
Yes
Pin9 and 18 in TIC1 of main PCB has nomal level?
No
Check the connection between pin9 and 18 in TIC1 of main PCB and pin13 in IC202
Yes
Pin 40 and pin54~43 in TIC1 of main PCB has clock and digital video signal nomal level?
No
Check TIC1 peripheral circuit
Yes
Change main PCB



Line2 CVBS Video Input Error
Pin 6 in IC801 has nomal level? (jack PCB)
No
Check the connection between pin 6 in IC801 and L2 pin-jack
Yes
Pin 21 in IC801 has nomal level?
No
Check pin 62, 55 in IC801 of input power
Yes
Pin80 in TIC1 of main PCB has nomal level?
No
Check the connection between pin80 in TIC1 of main PCB and pin13 in IC201
Yes
Pin 40 and pin54~43 in TIC1of main PCB has clock and digital video signal nomal level?
No
Check TIC1 peripheral circuit
Yes
Change main PCB

15. Schematic Diagrams

Note

For schematic Diagram
- Resistors are in ohms, 1/8W unless otherwise noted.

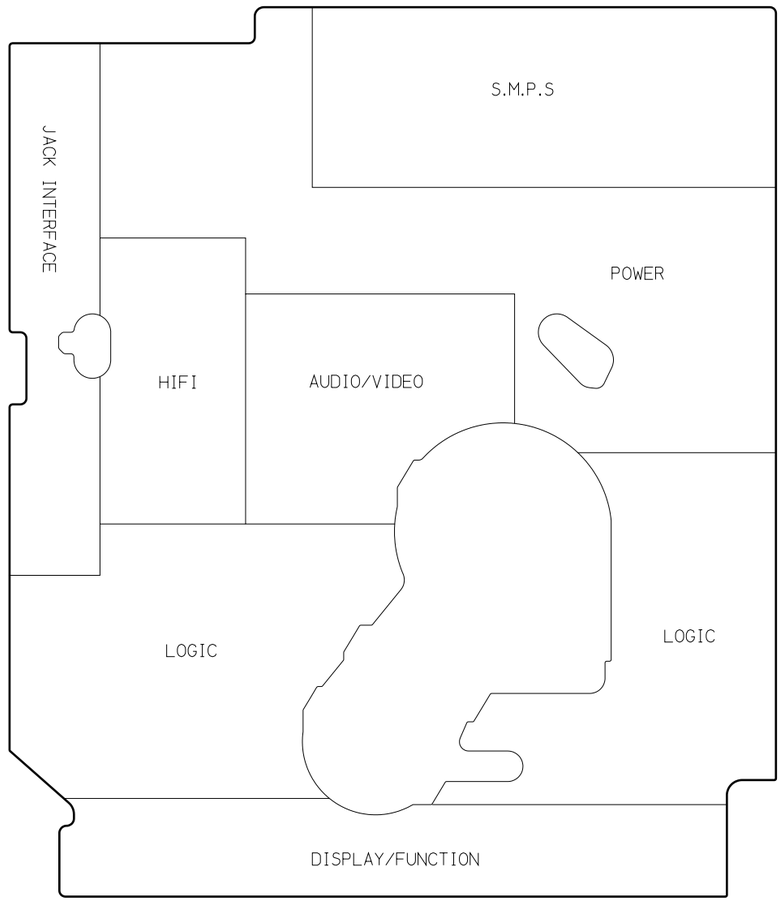
Special note :
Most semiconductor devices are electrostatically sensitive and therefore require the special handling techniques described under the "electrostatically sensitive (ES) devices" section of this service manual.

Note :
Do not use the part number shown on this drawing for ordering. The correct part number is shown in the parts list (may be slightly different or amended since this drawing was prepared).

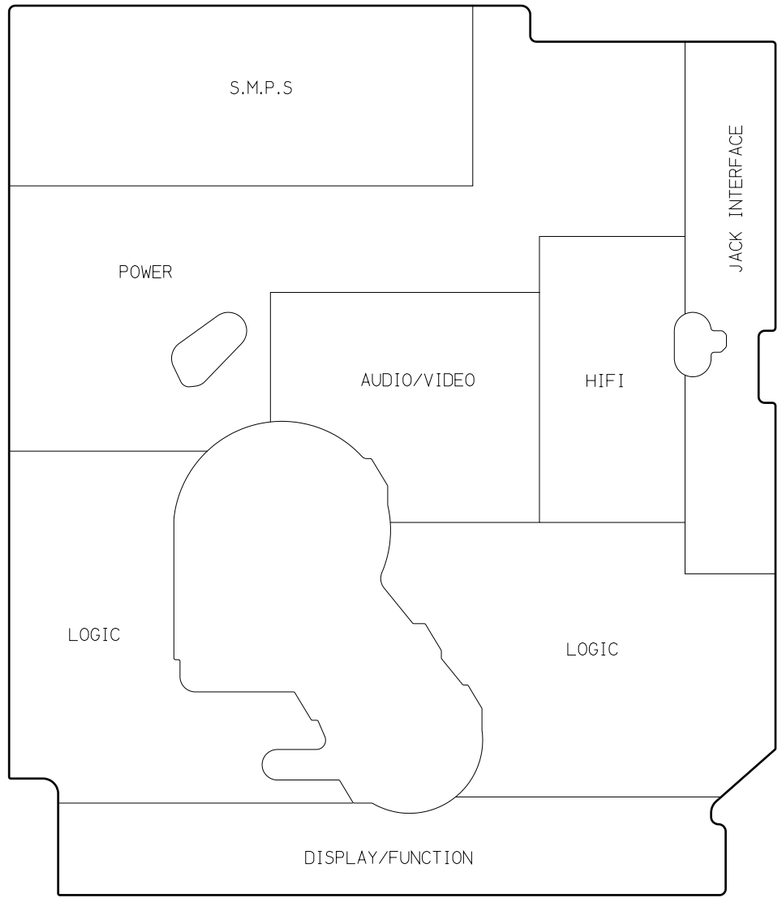
Important safety notices :
Components identified with the mark ⚠ have the special characteristics for safety. When replacing any of these components.
Use only the same type.

◆ Block Identification of Main PCB

VCR MAIN PCB

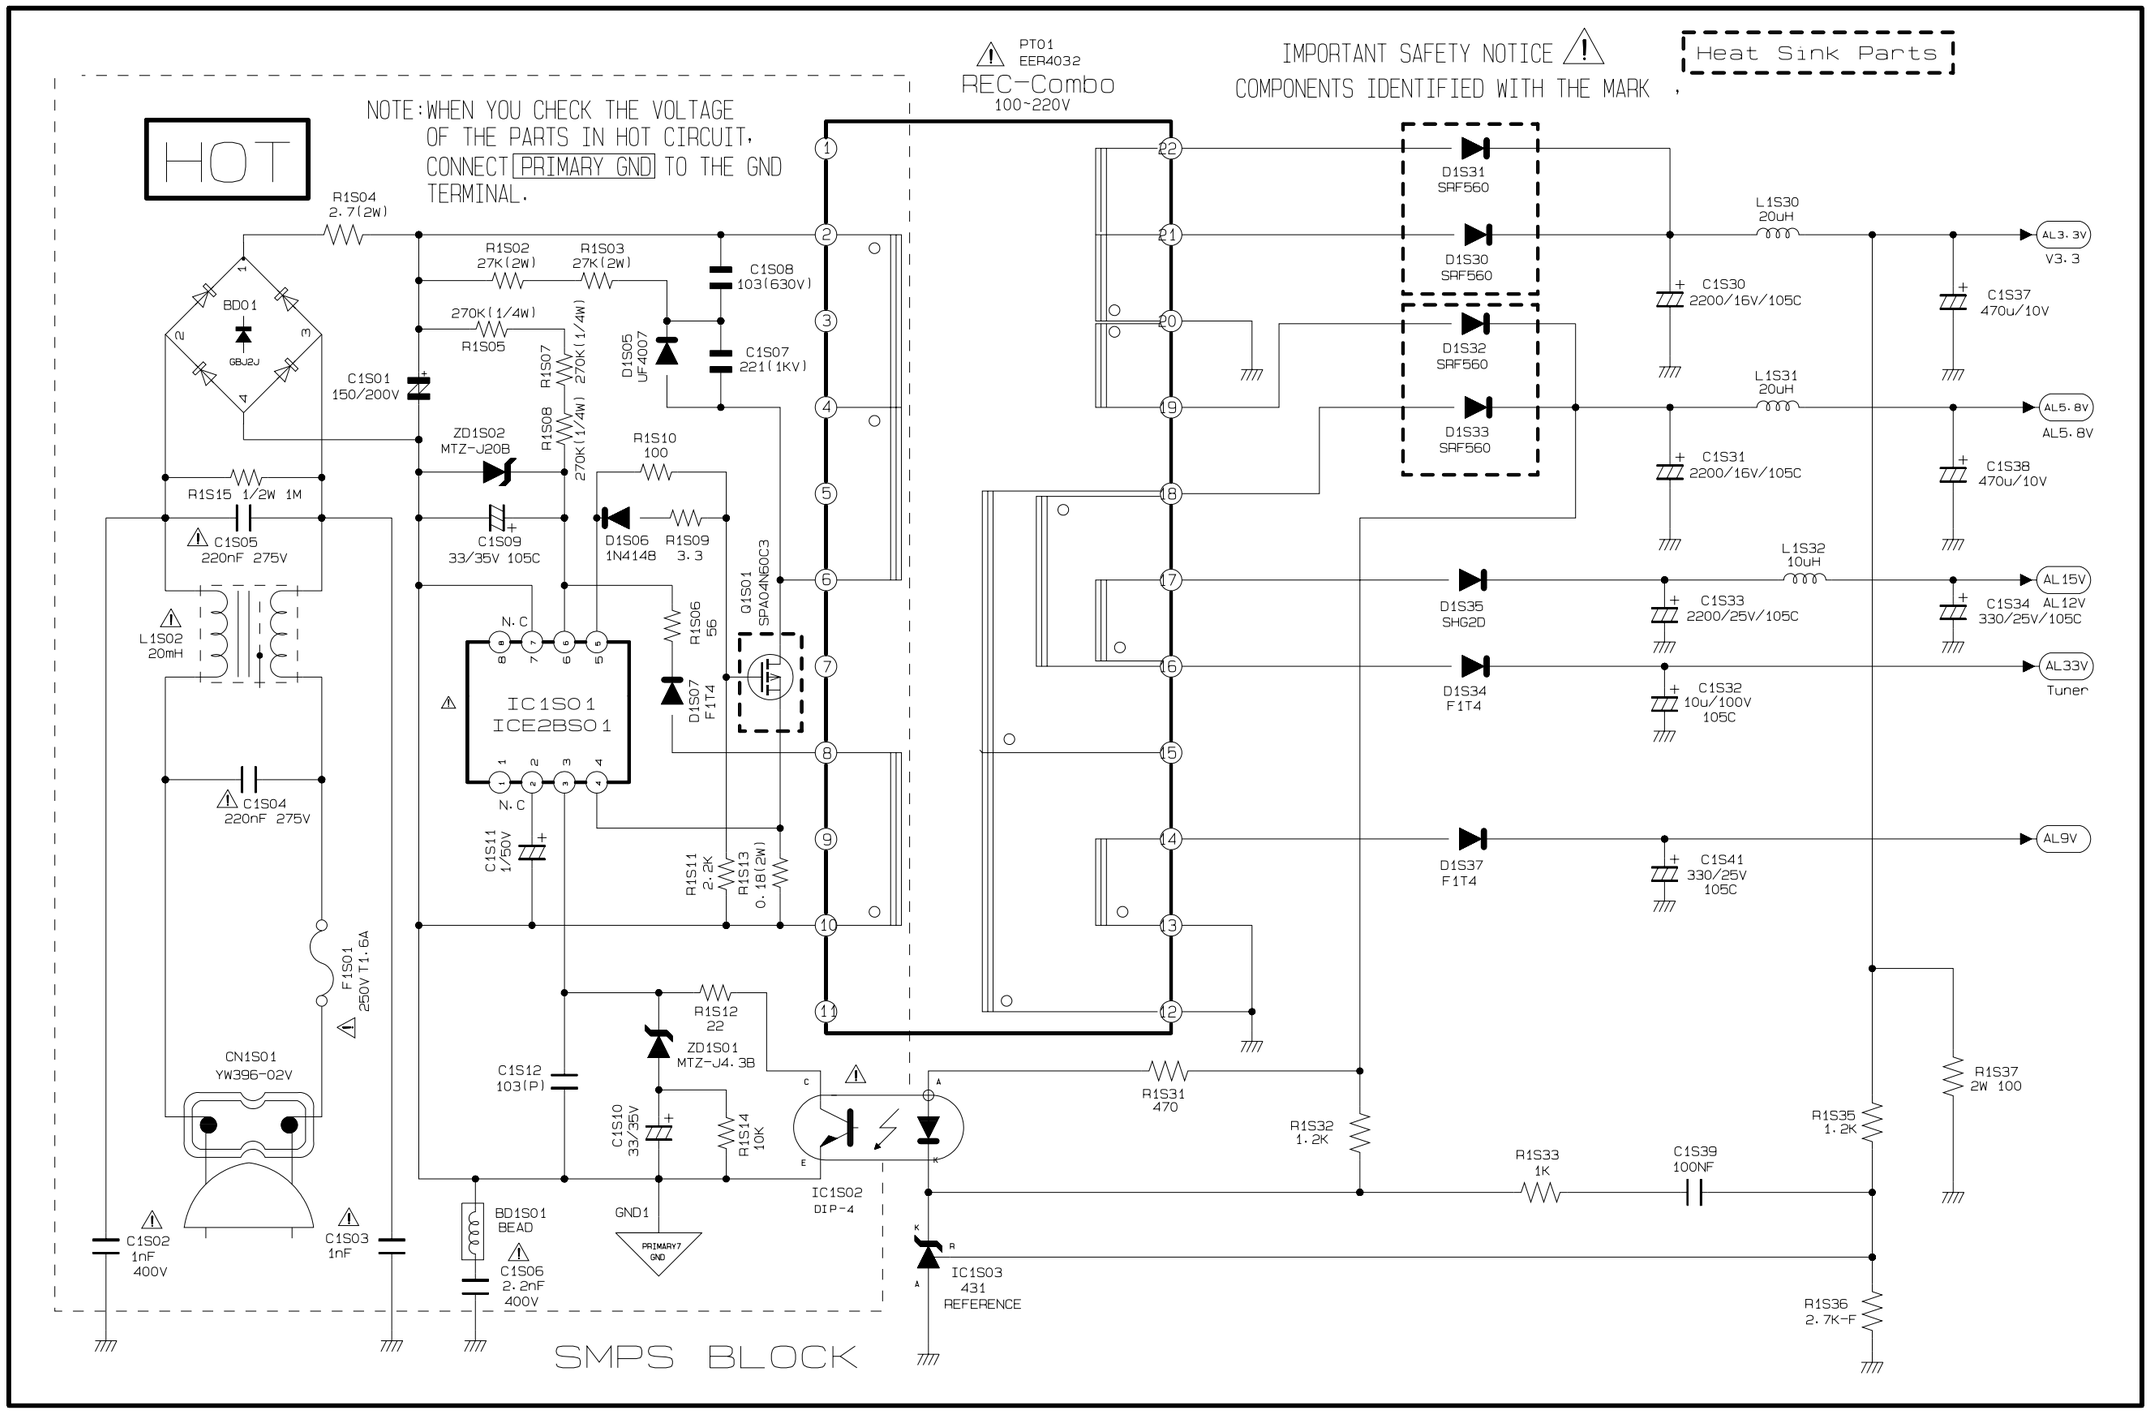


<Component Side>

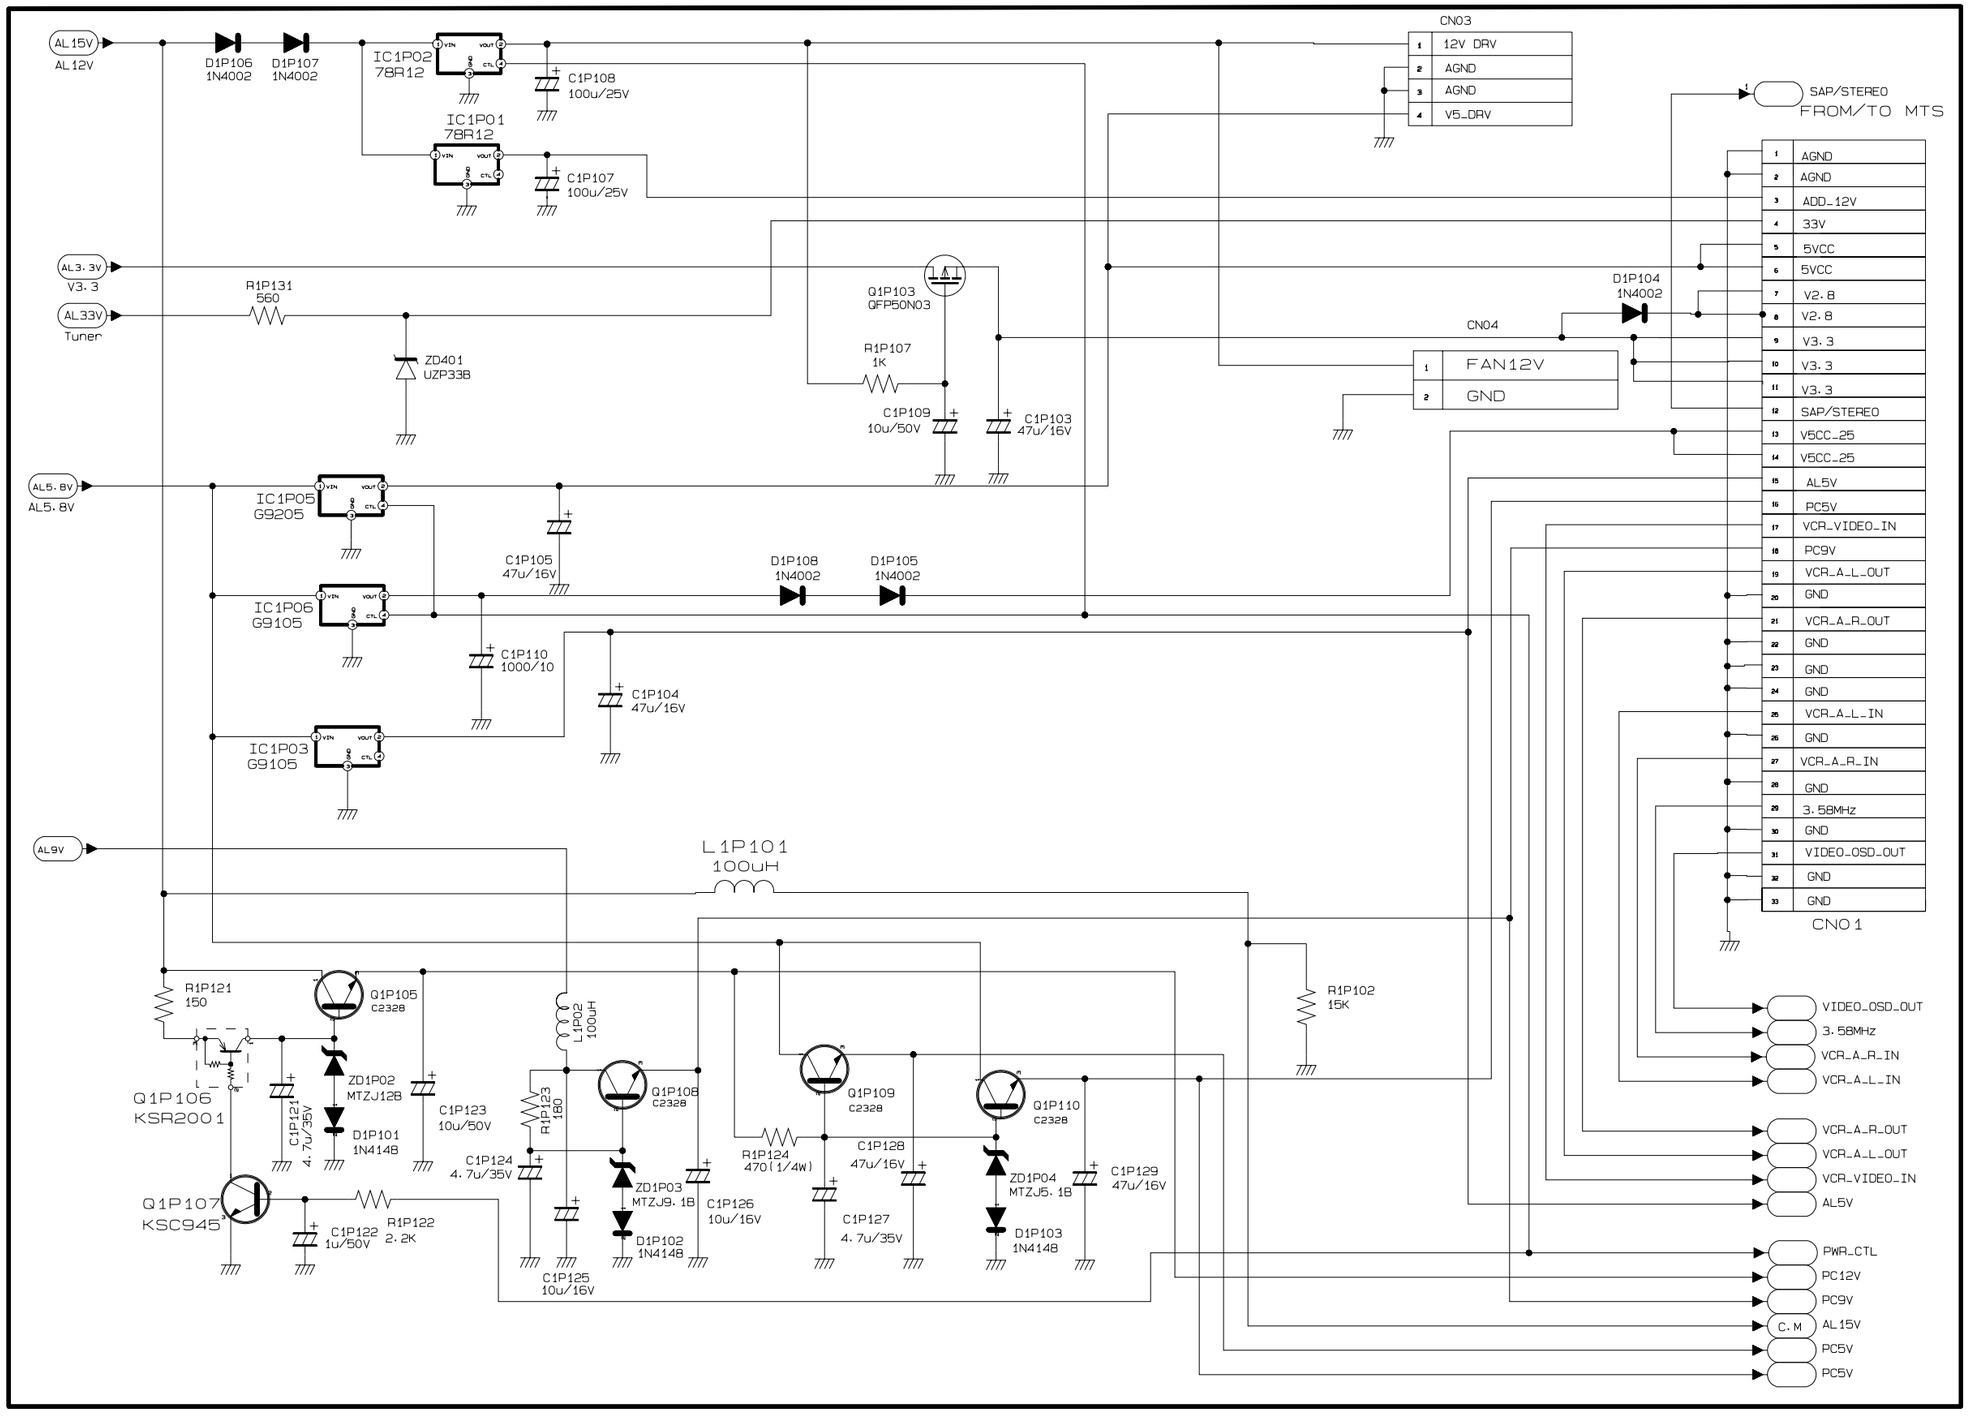


<Conductor Side>

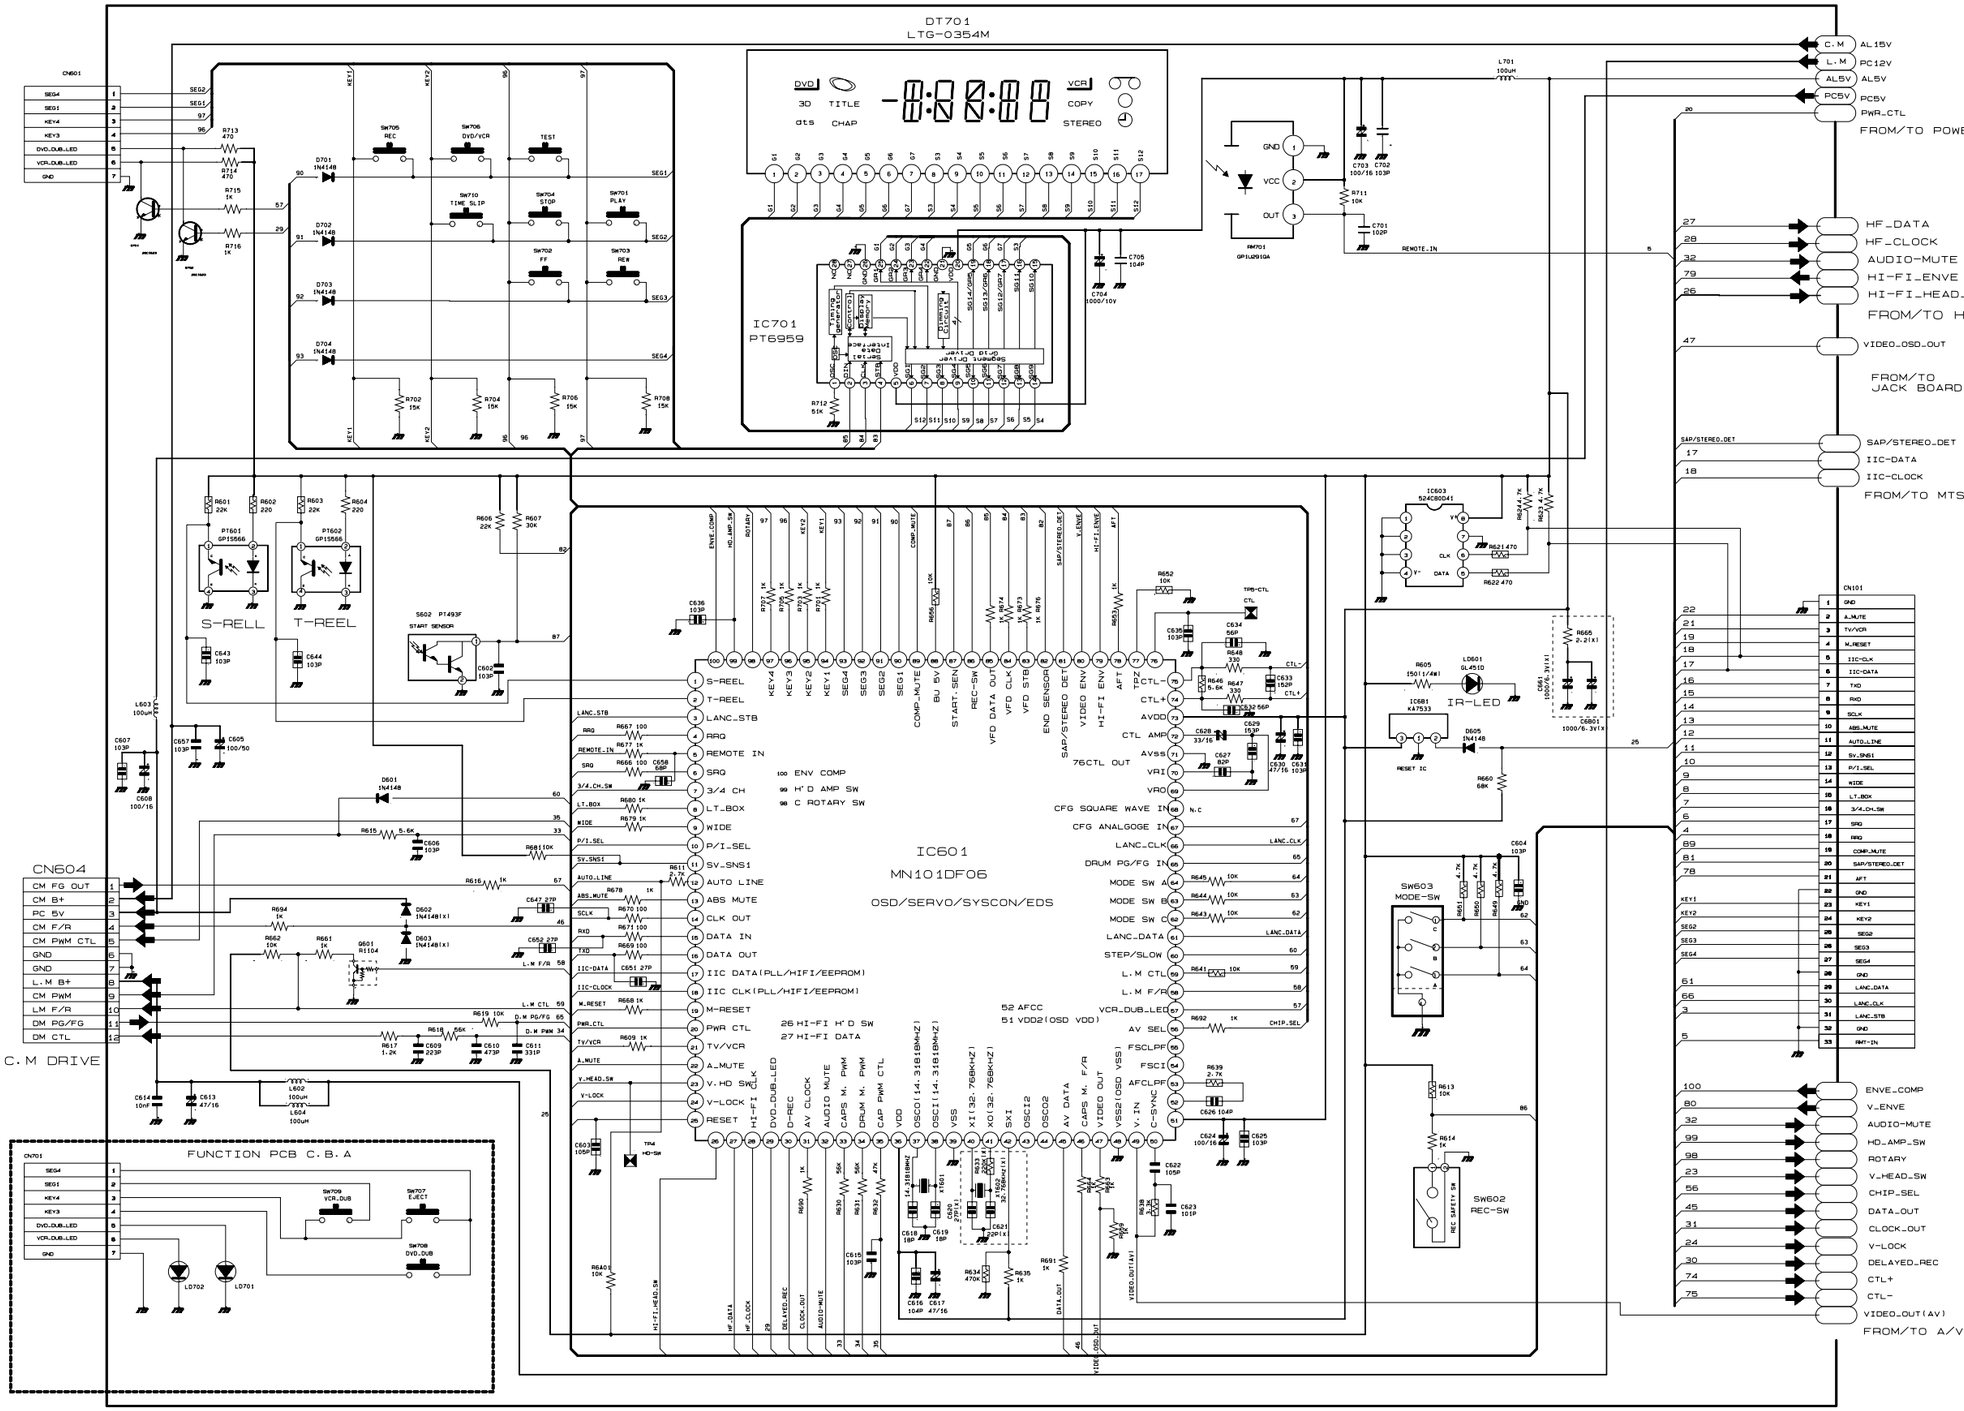
15-1 S.M.P.S (VCR Main PCB)



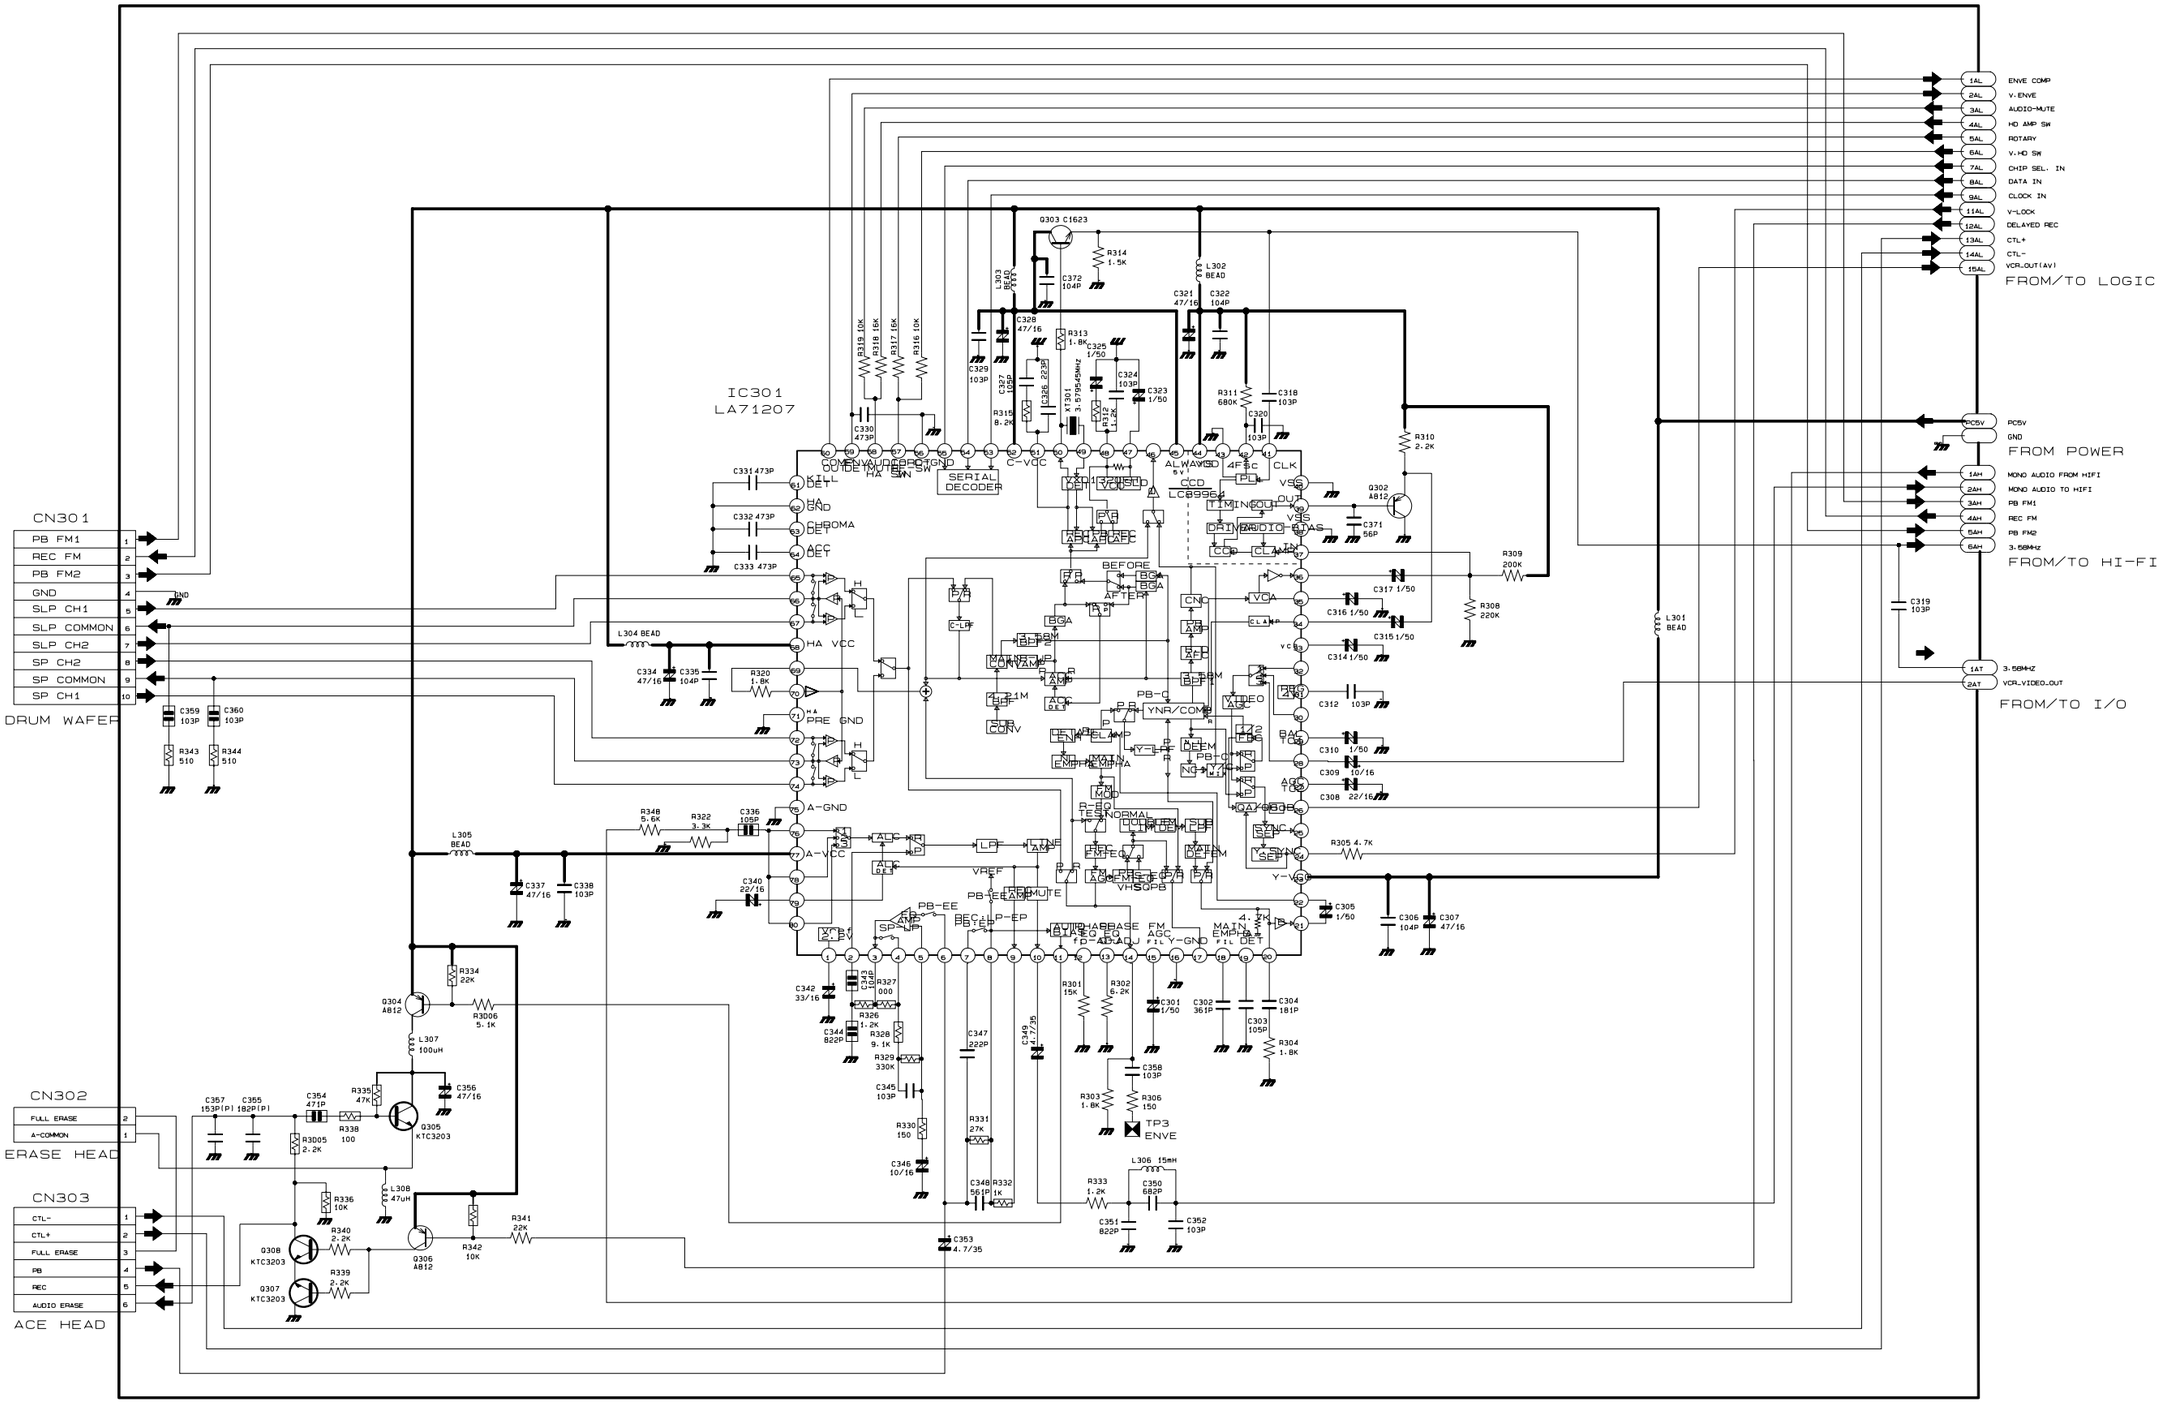
15-2 Power (VCR Main PCB)



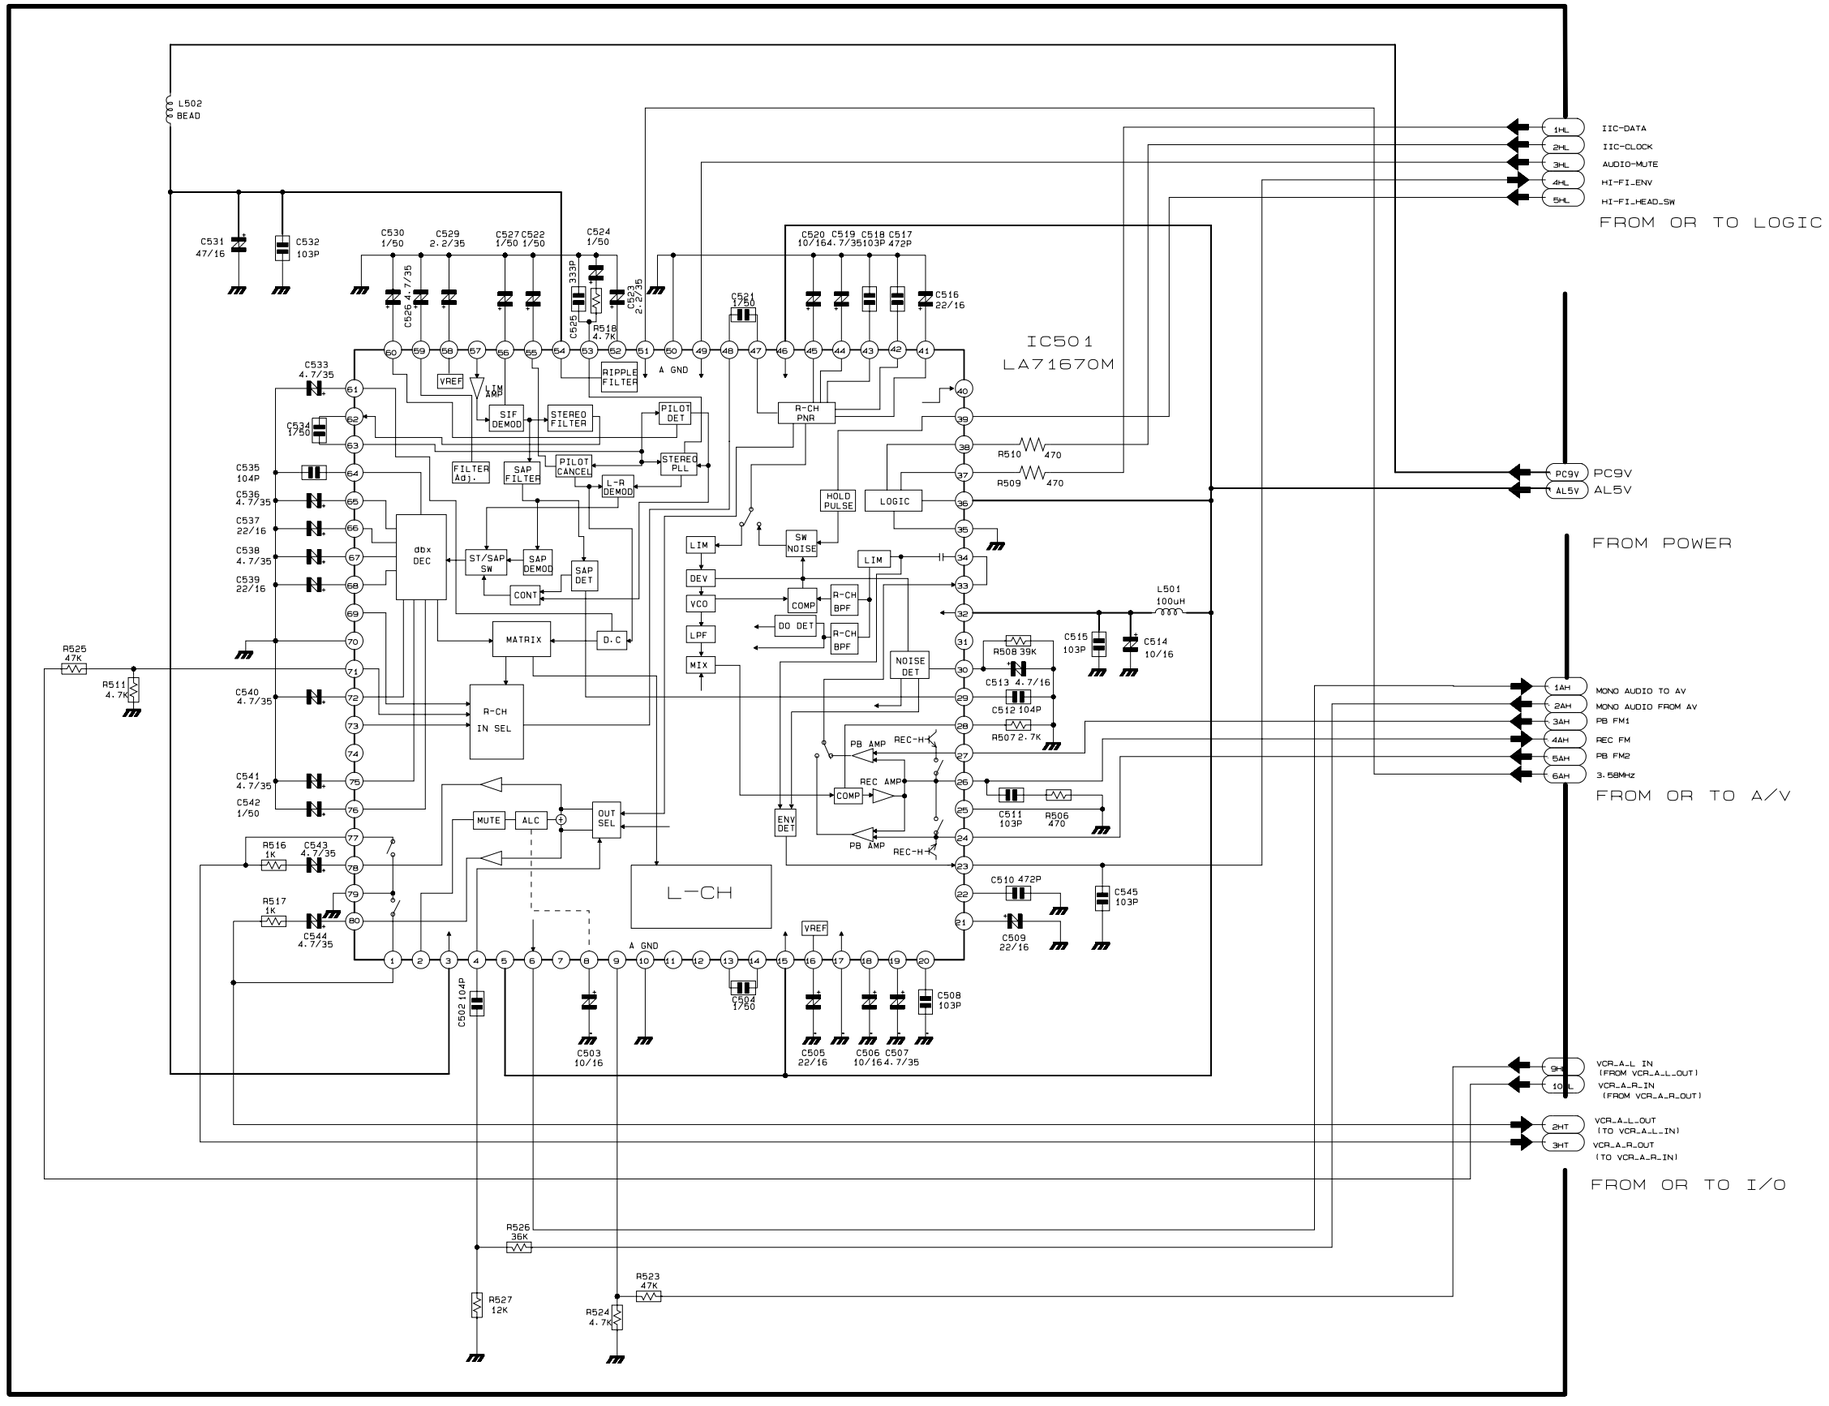
15-3 Logic (VCR Main PCB)



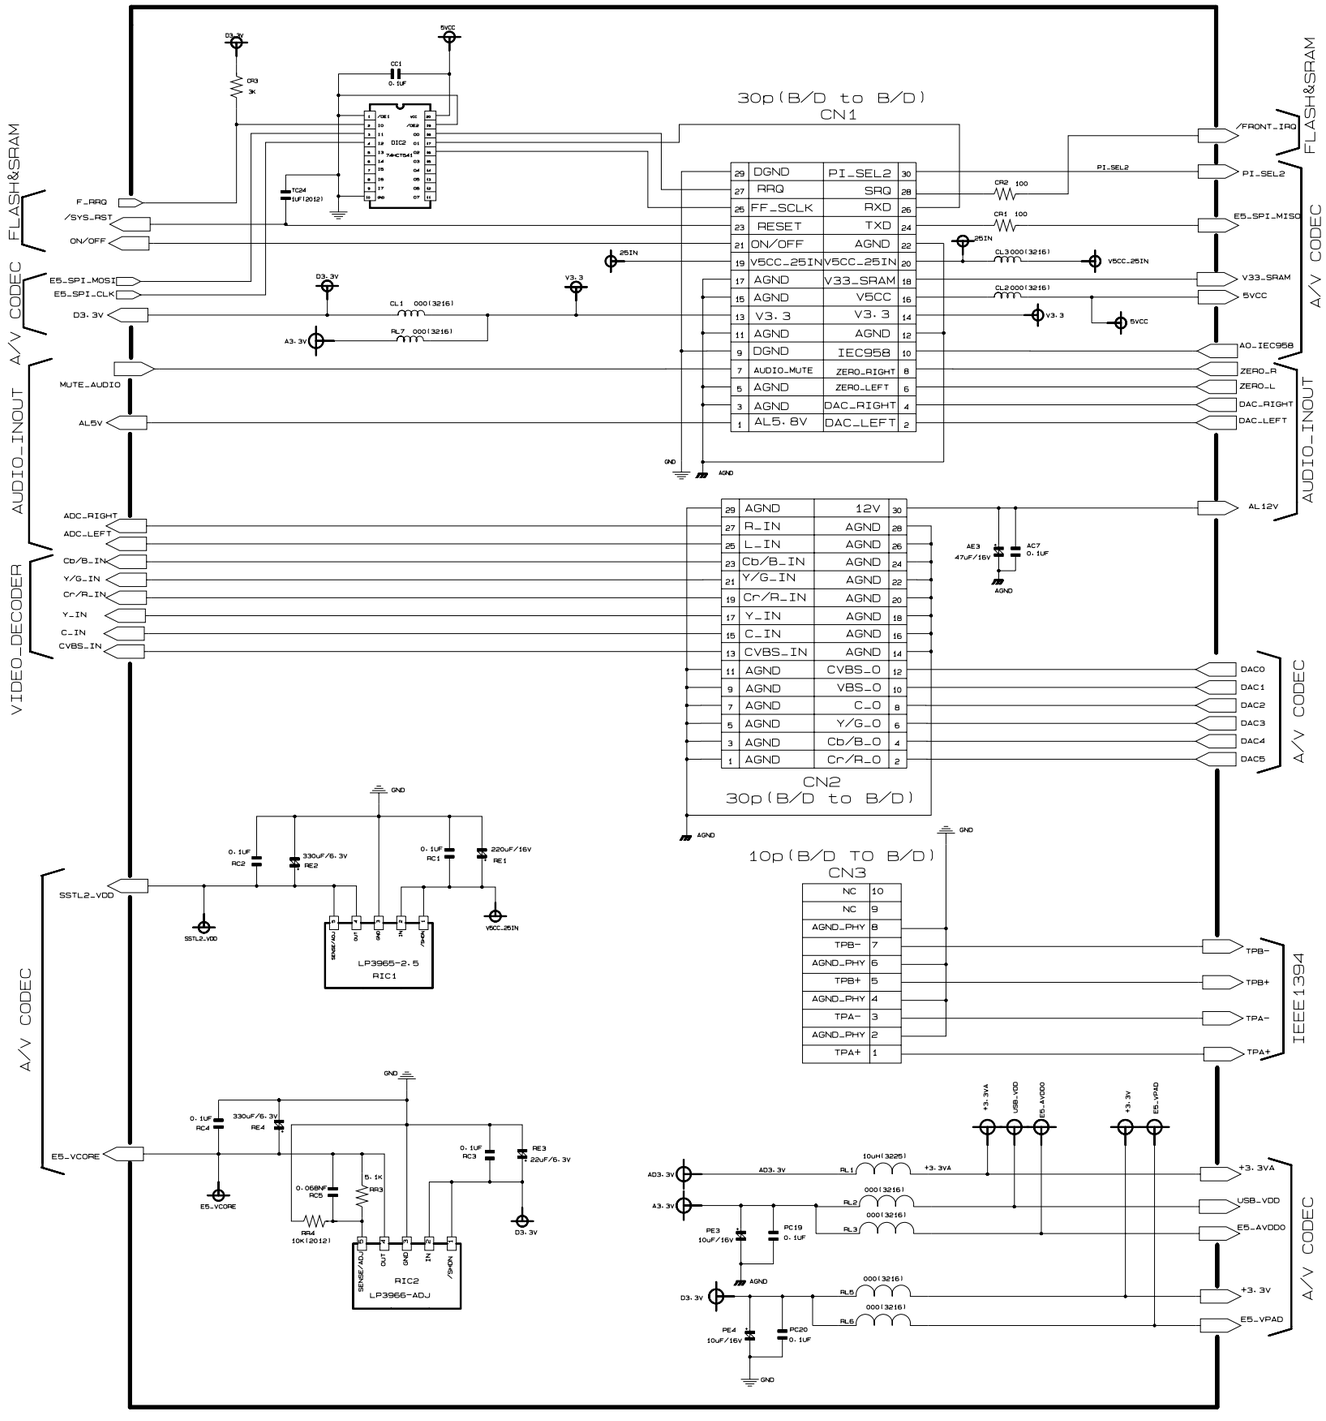
15-4 A/V (VCR Main PCB)



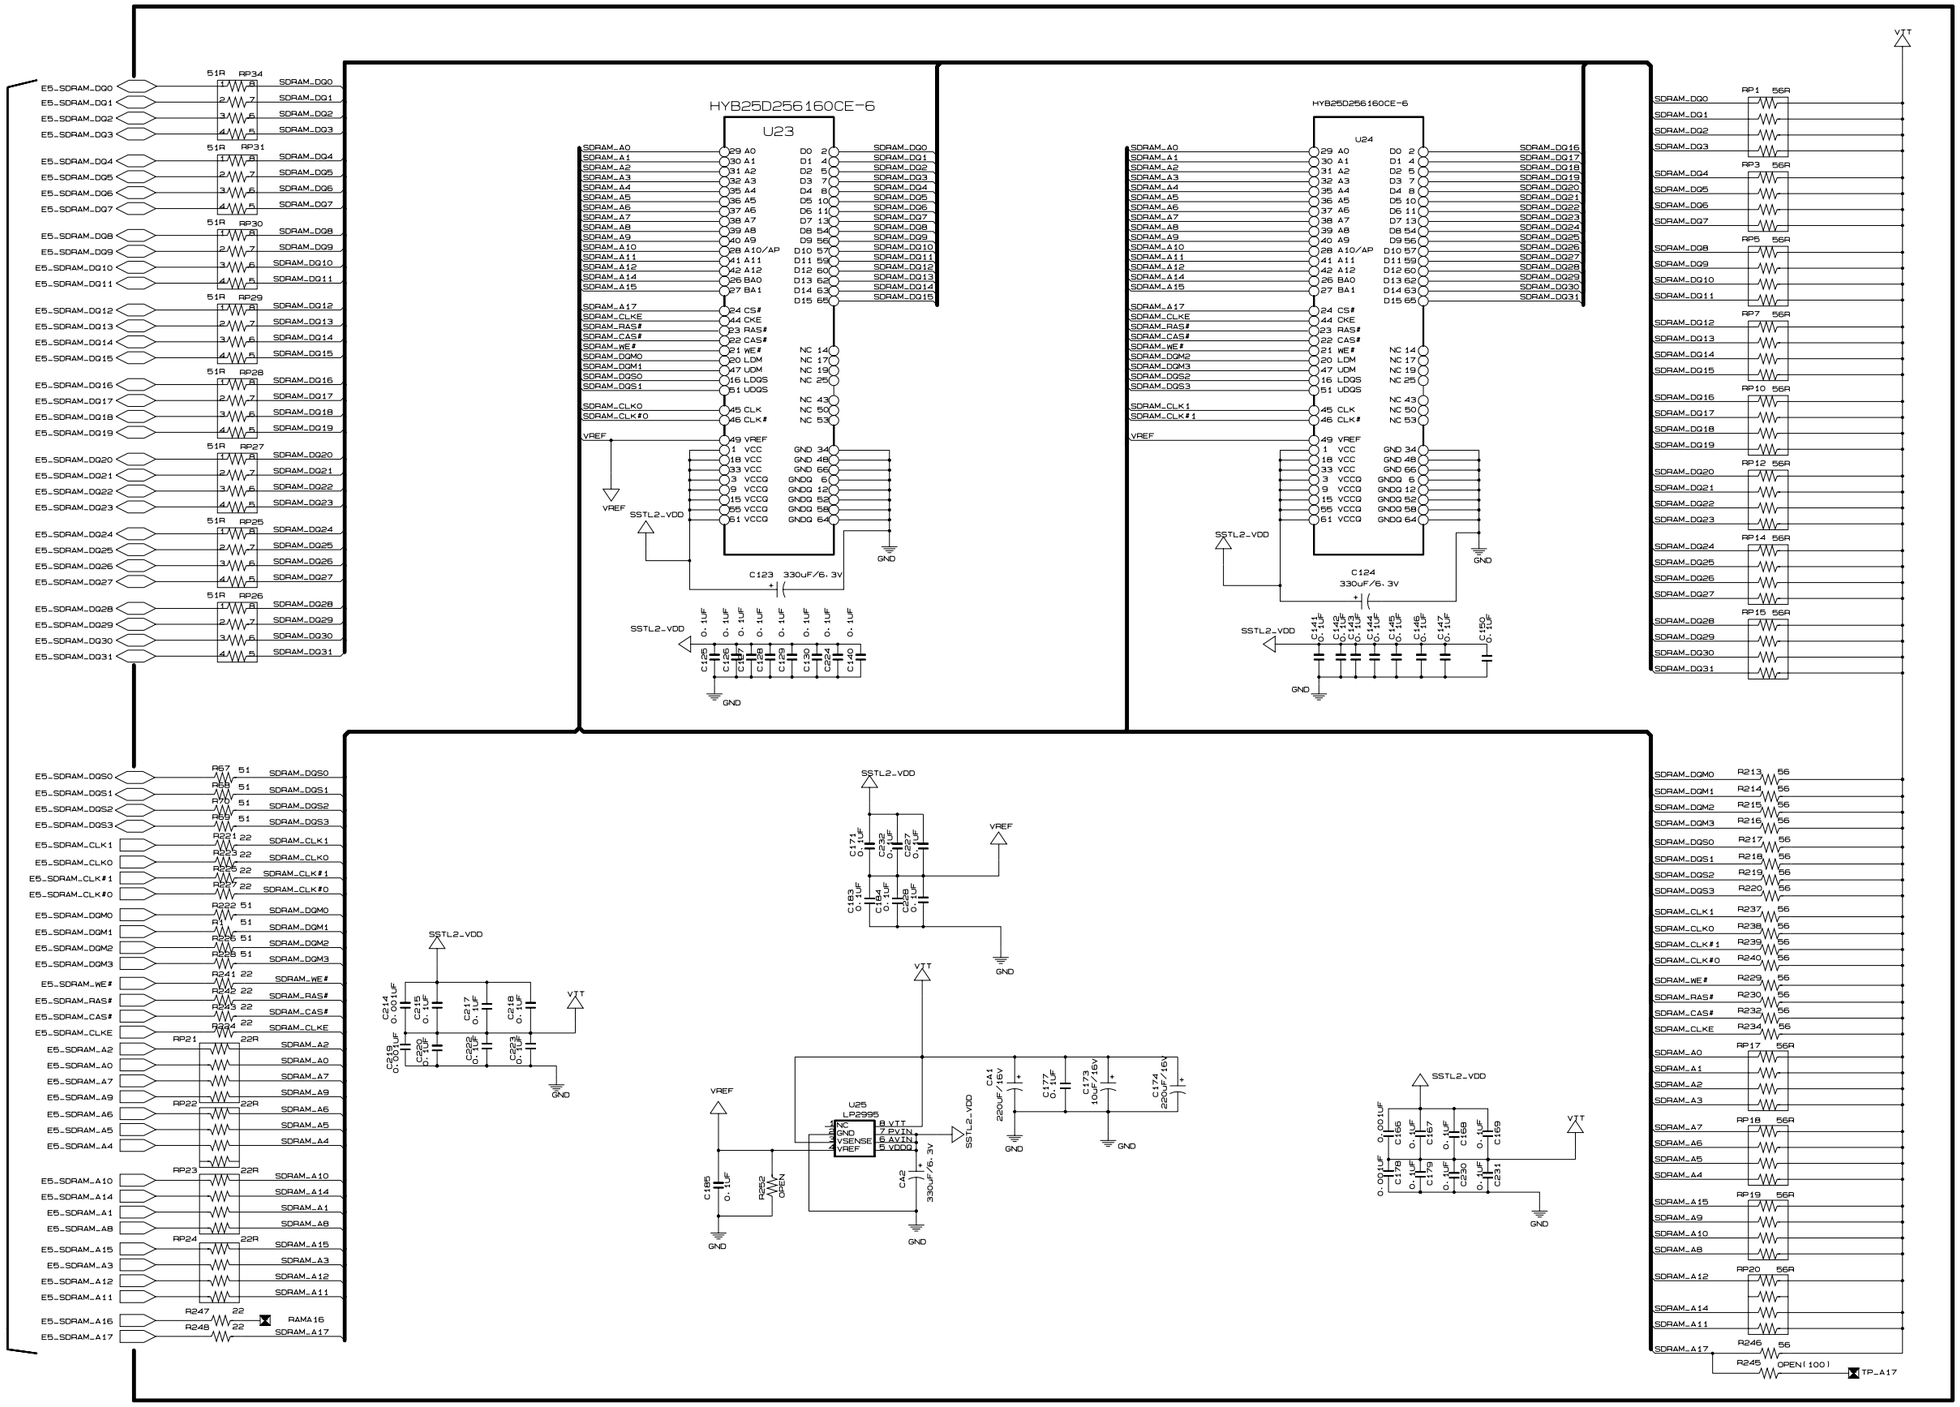
15-5 Hi-Fi/MTS (VCR Main PCB)



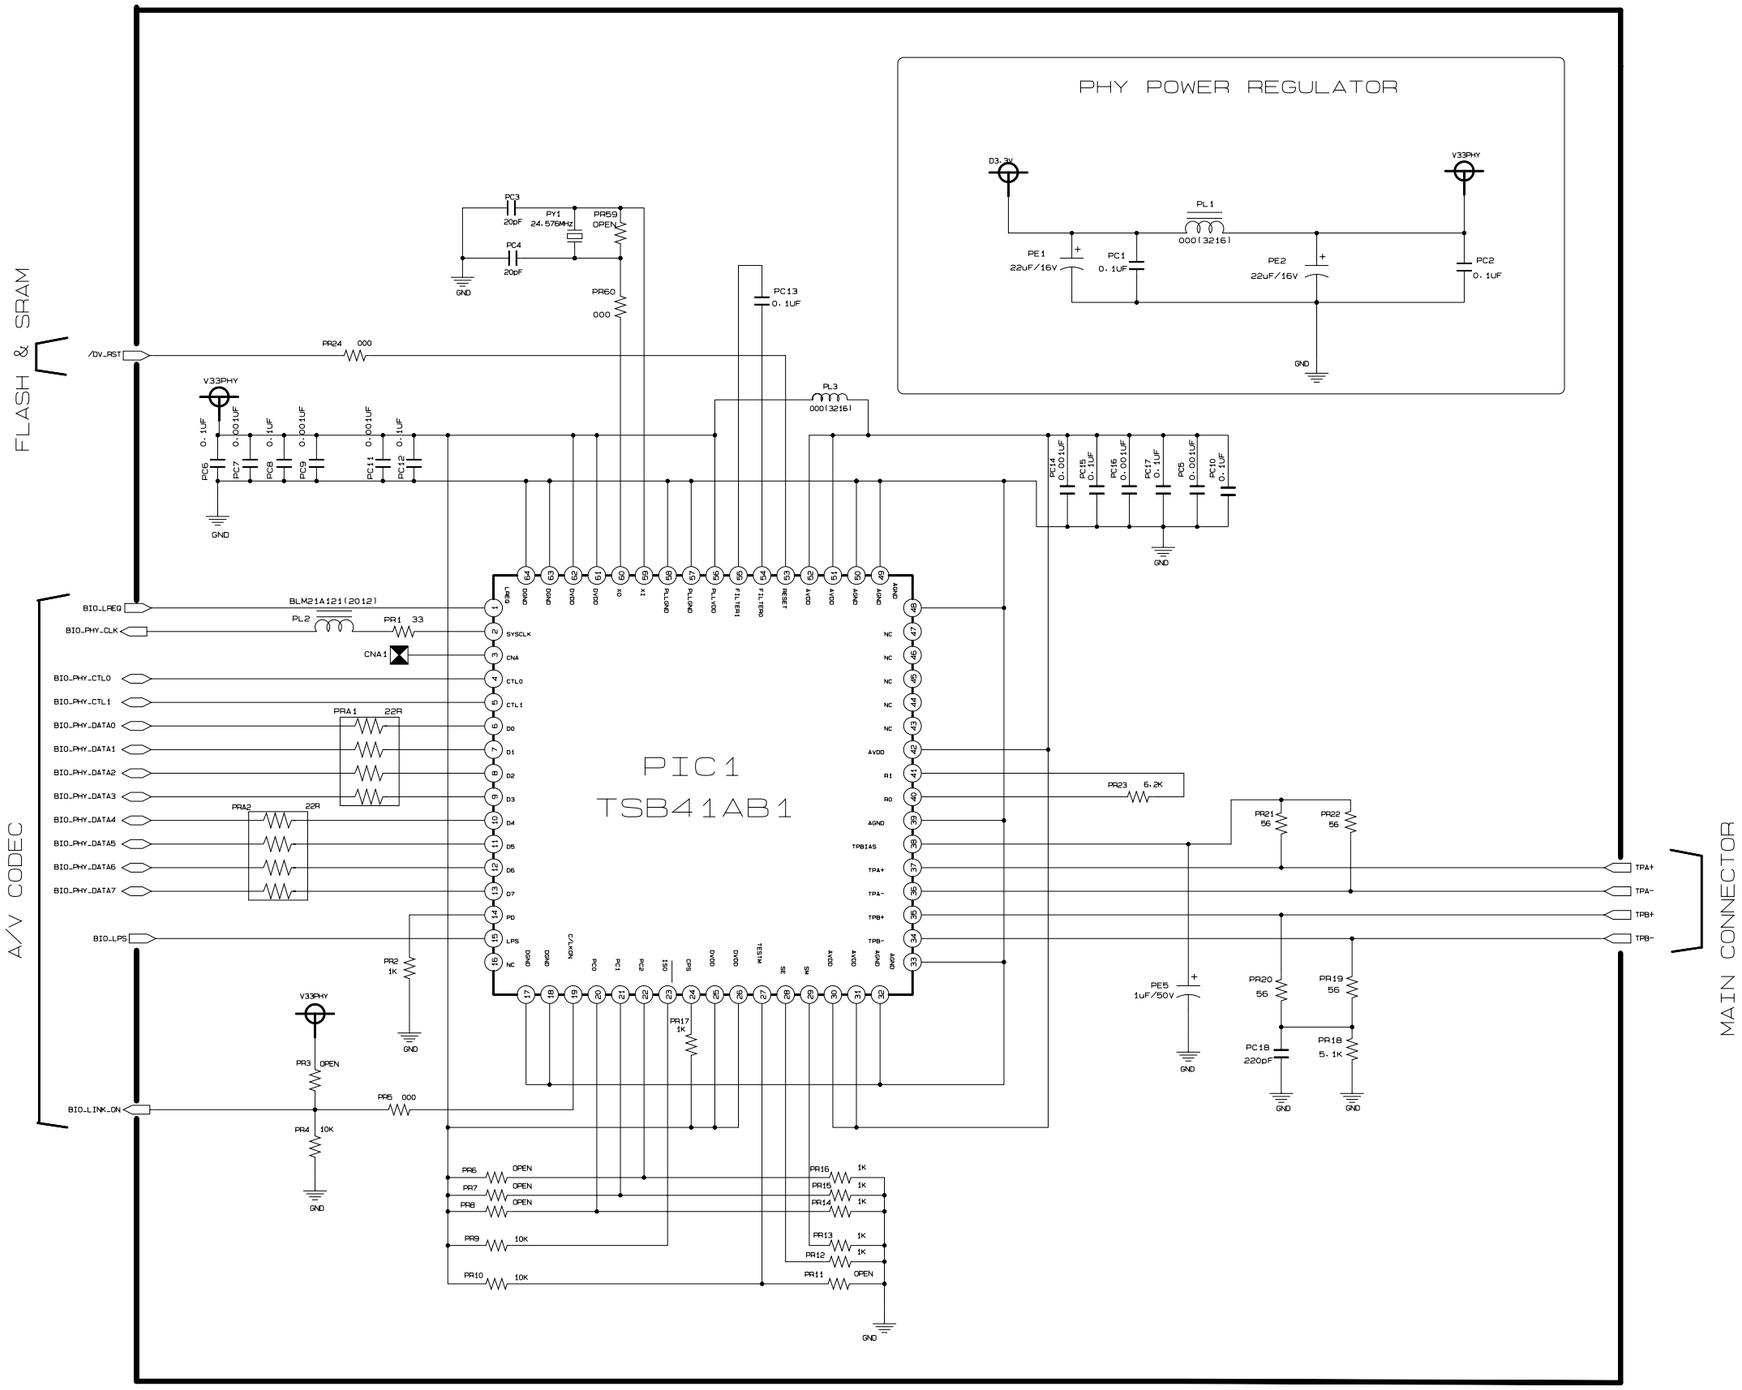
15-6 Main Connector (DVD Main PCB)



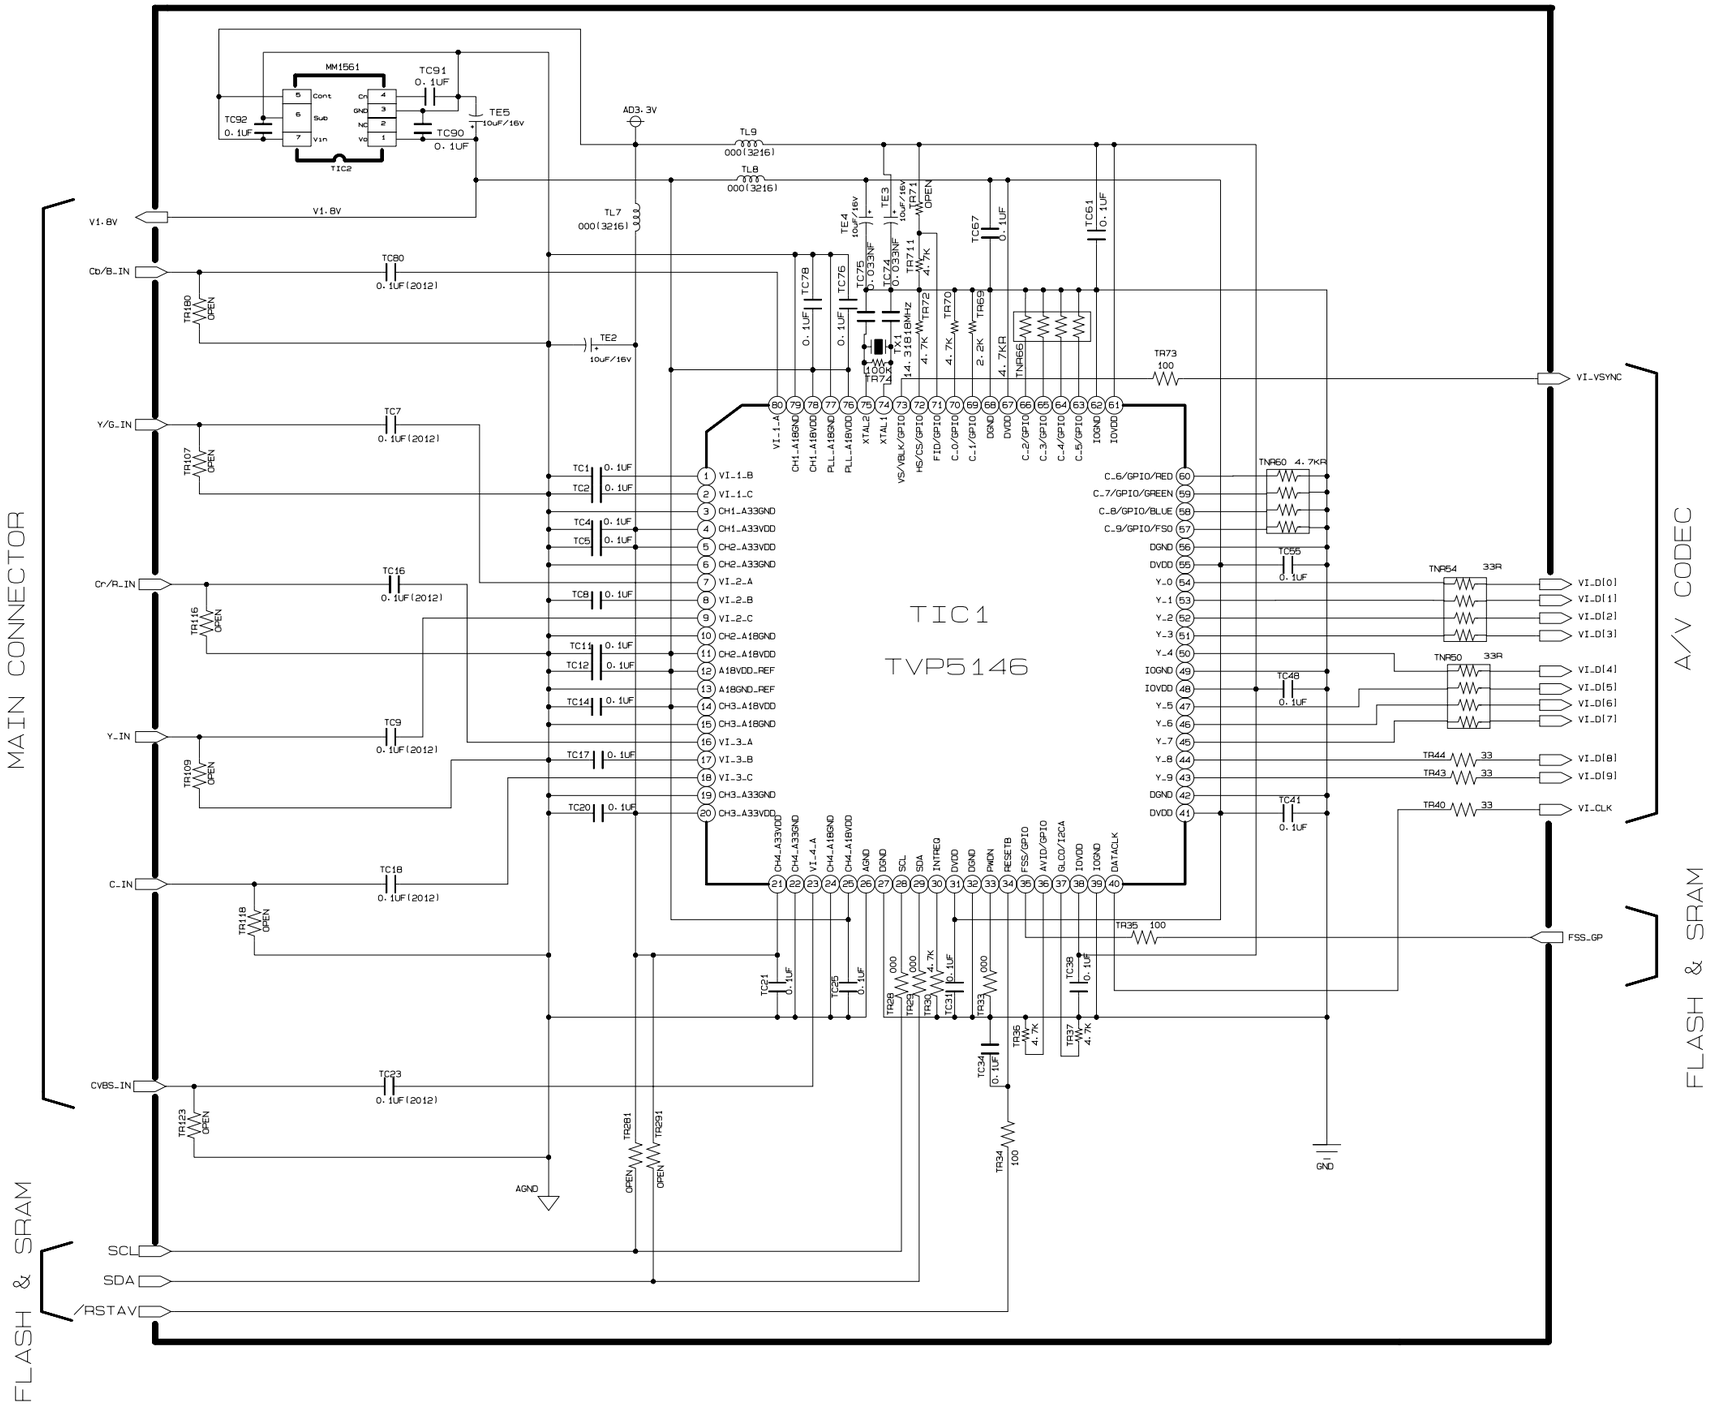
15-7 DDR (DVD Main PCB)



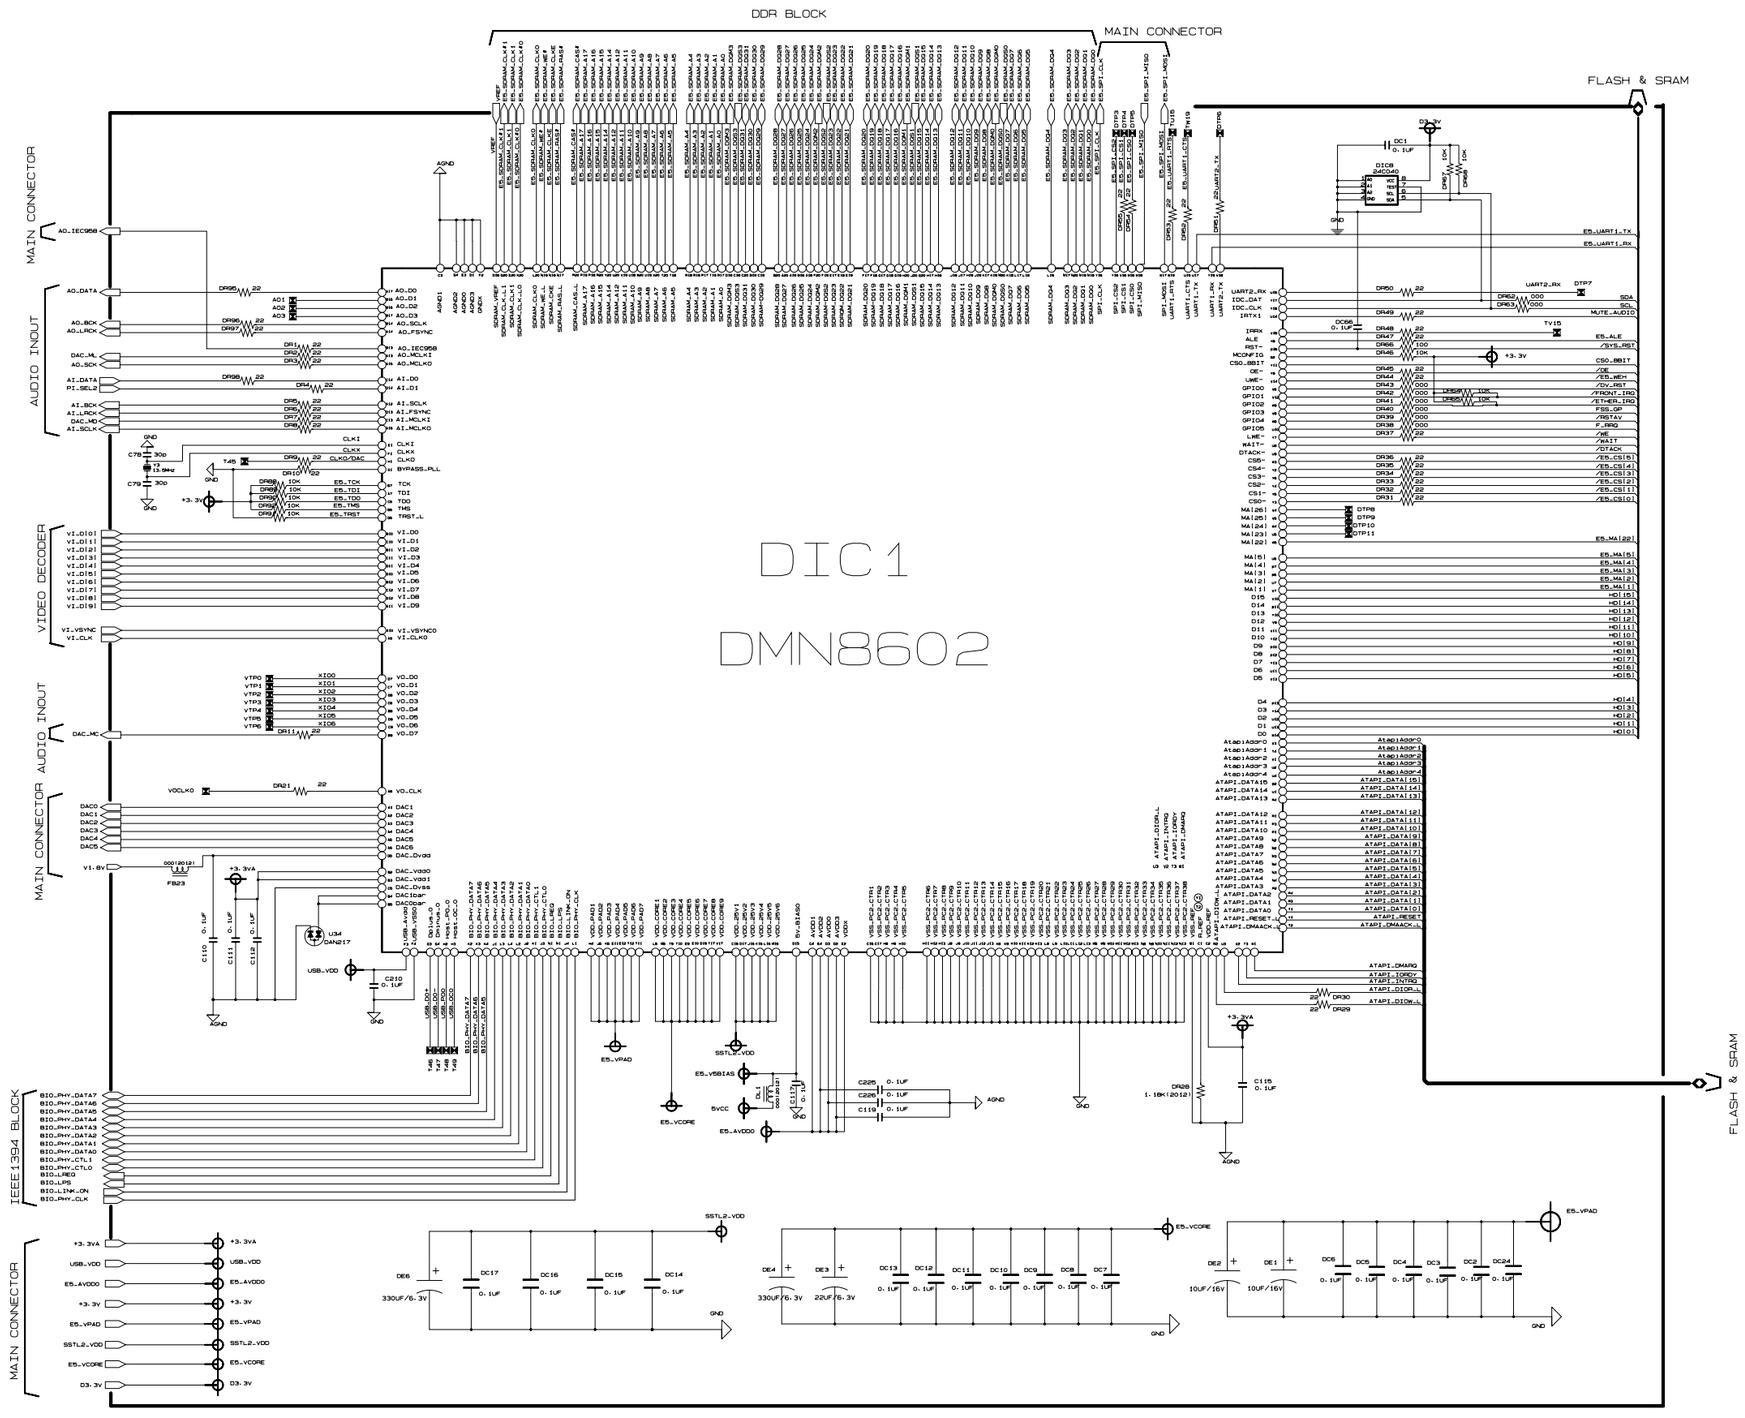
15-8 IEEE 1394 (DVD Main PCB)



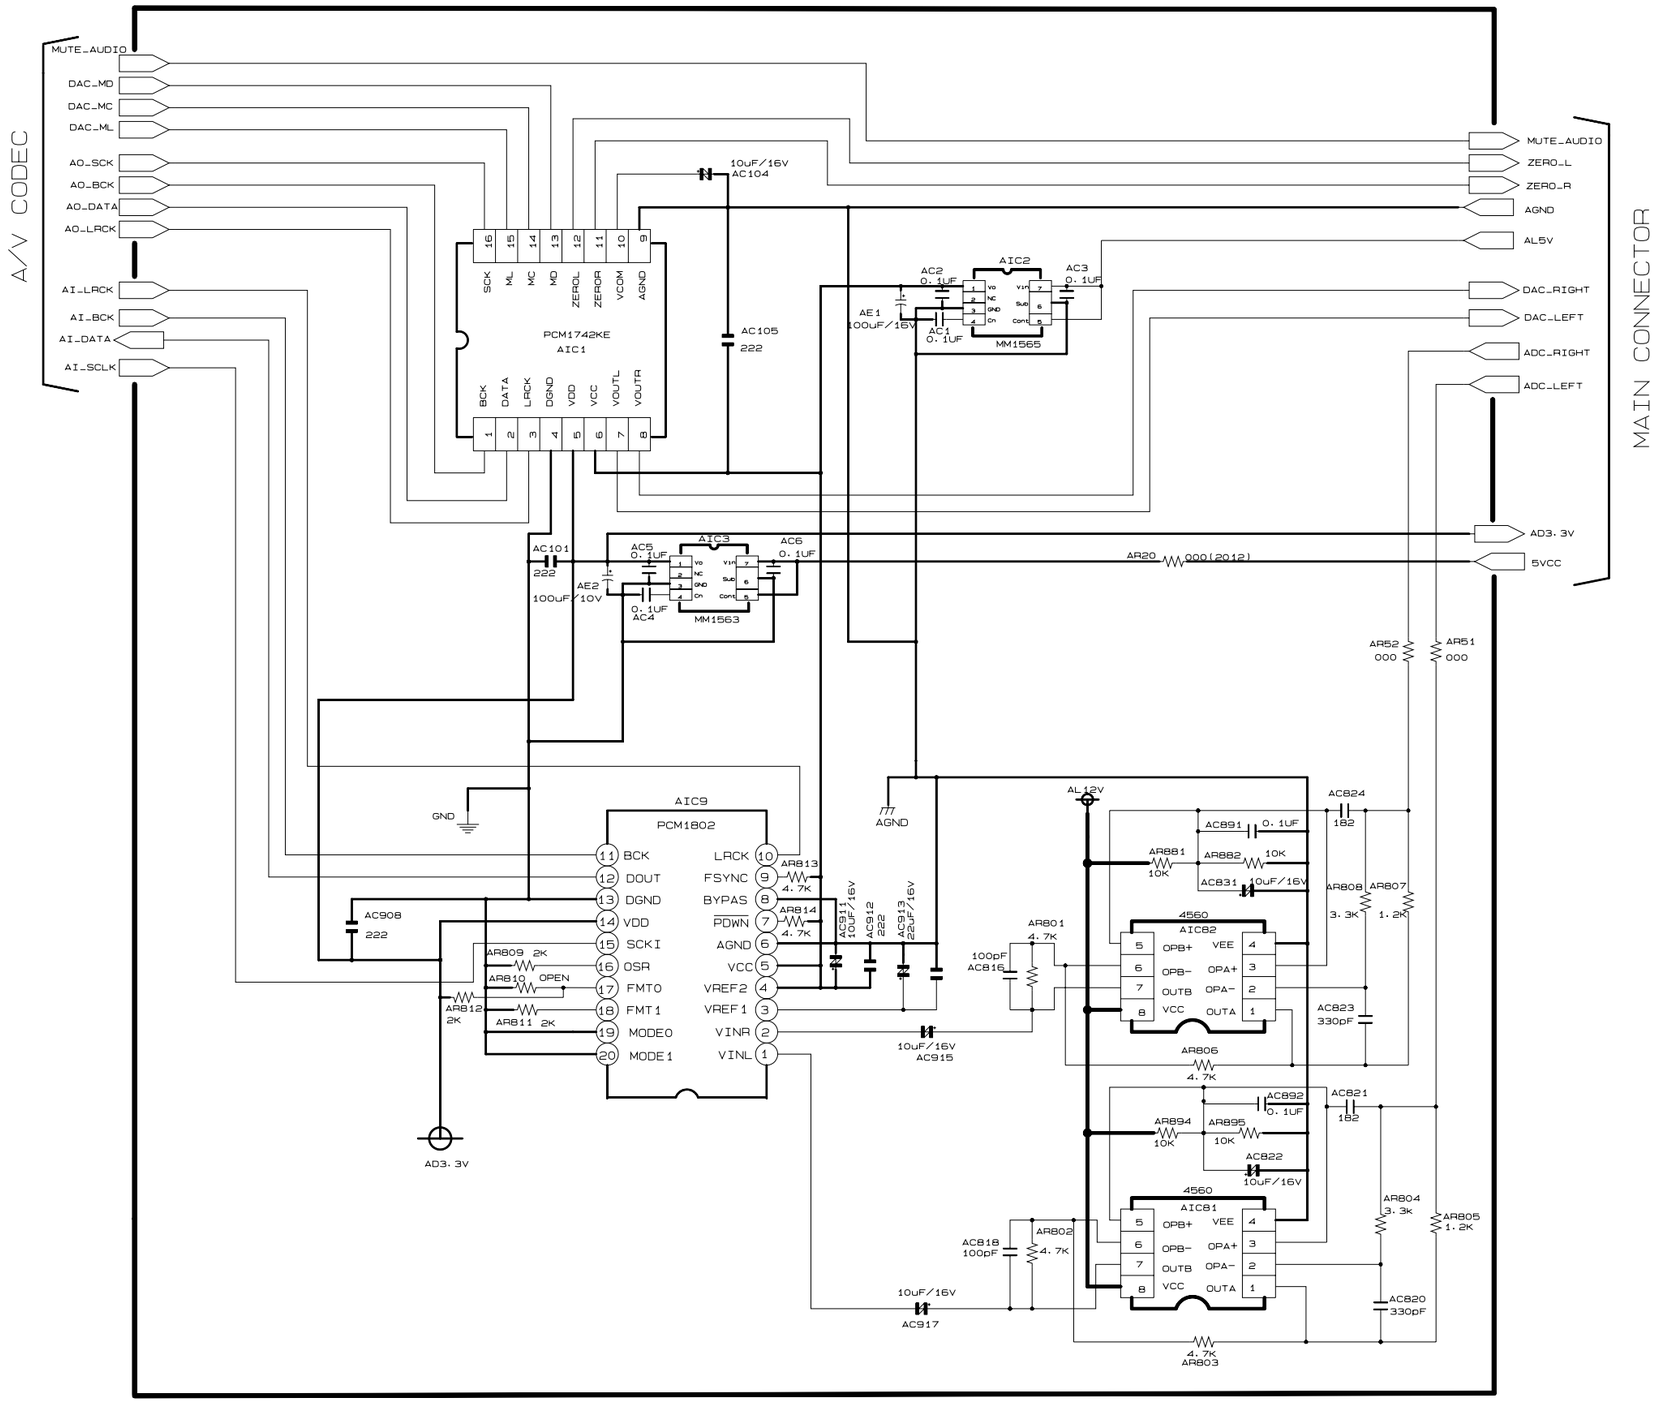
15-9 Video Decoder (DVD Main PCB)



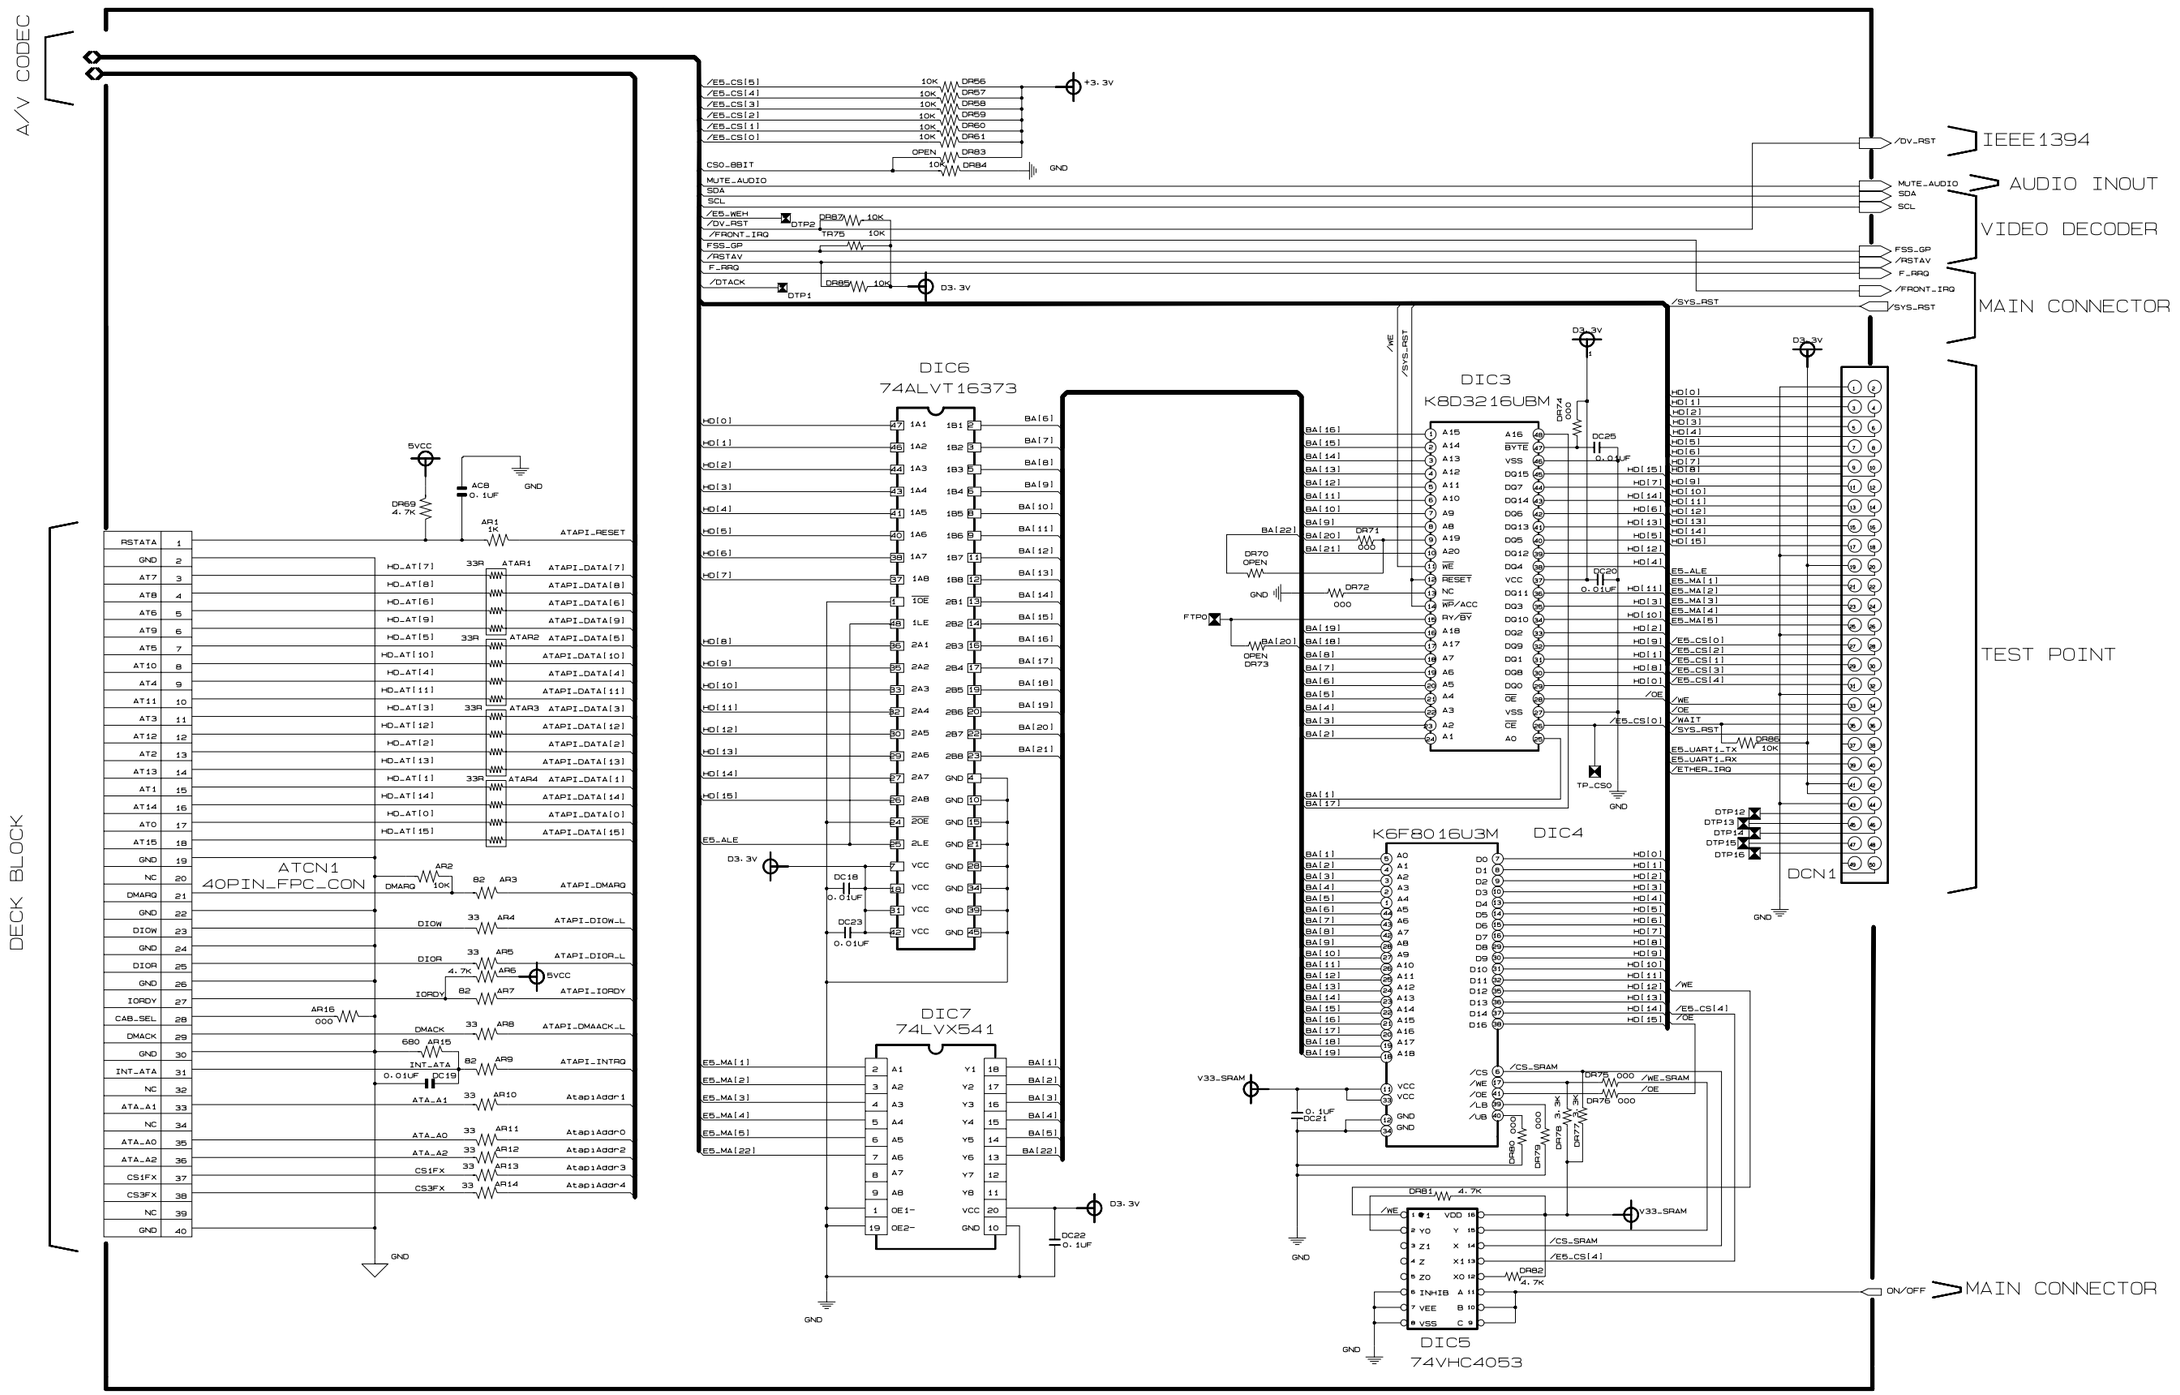
15-10 A/V Codec (DVD Main PCB)



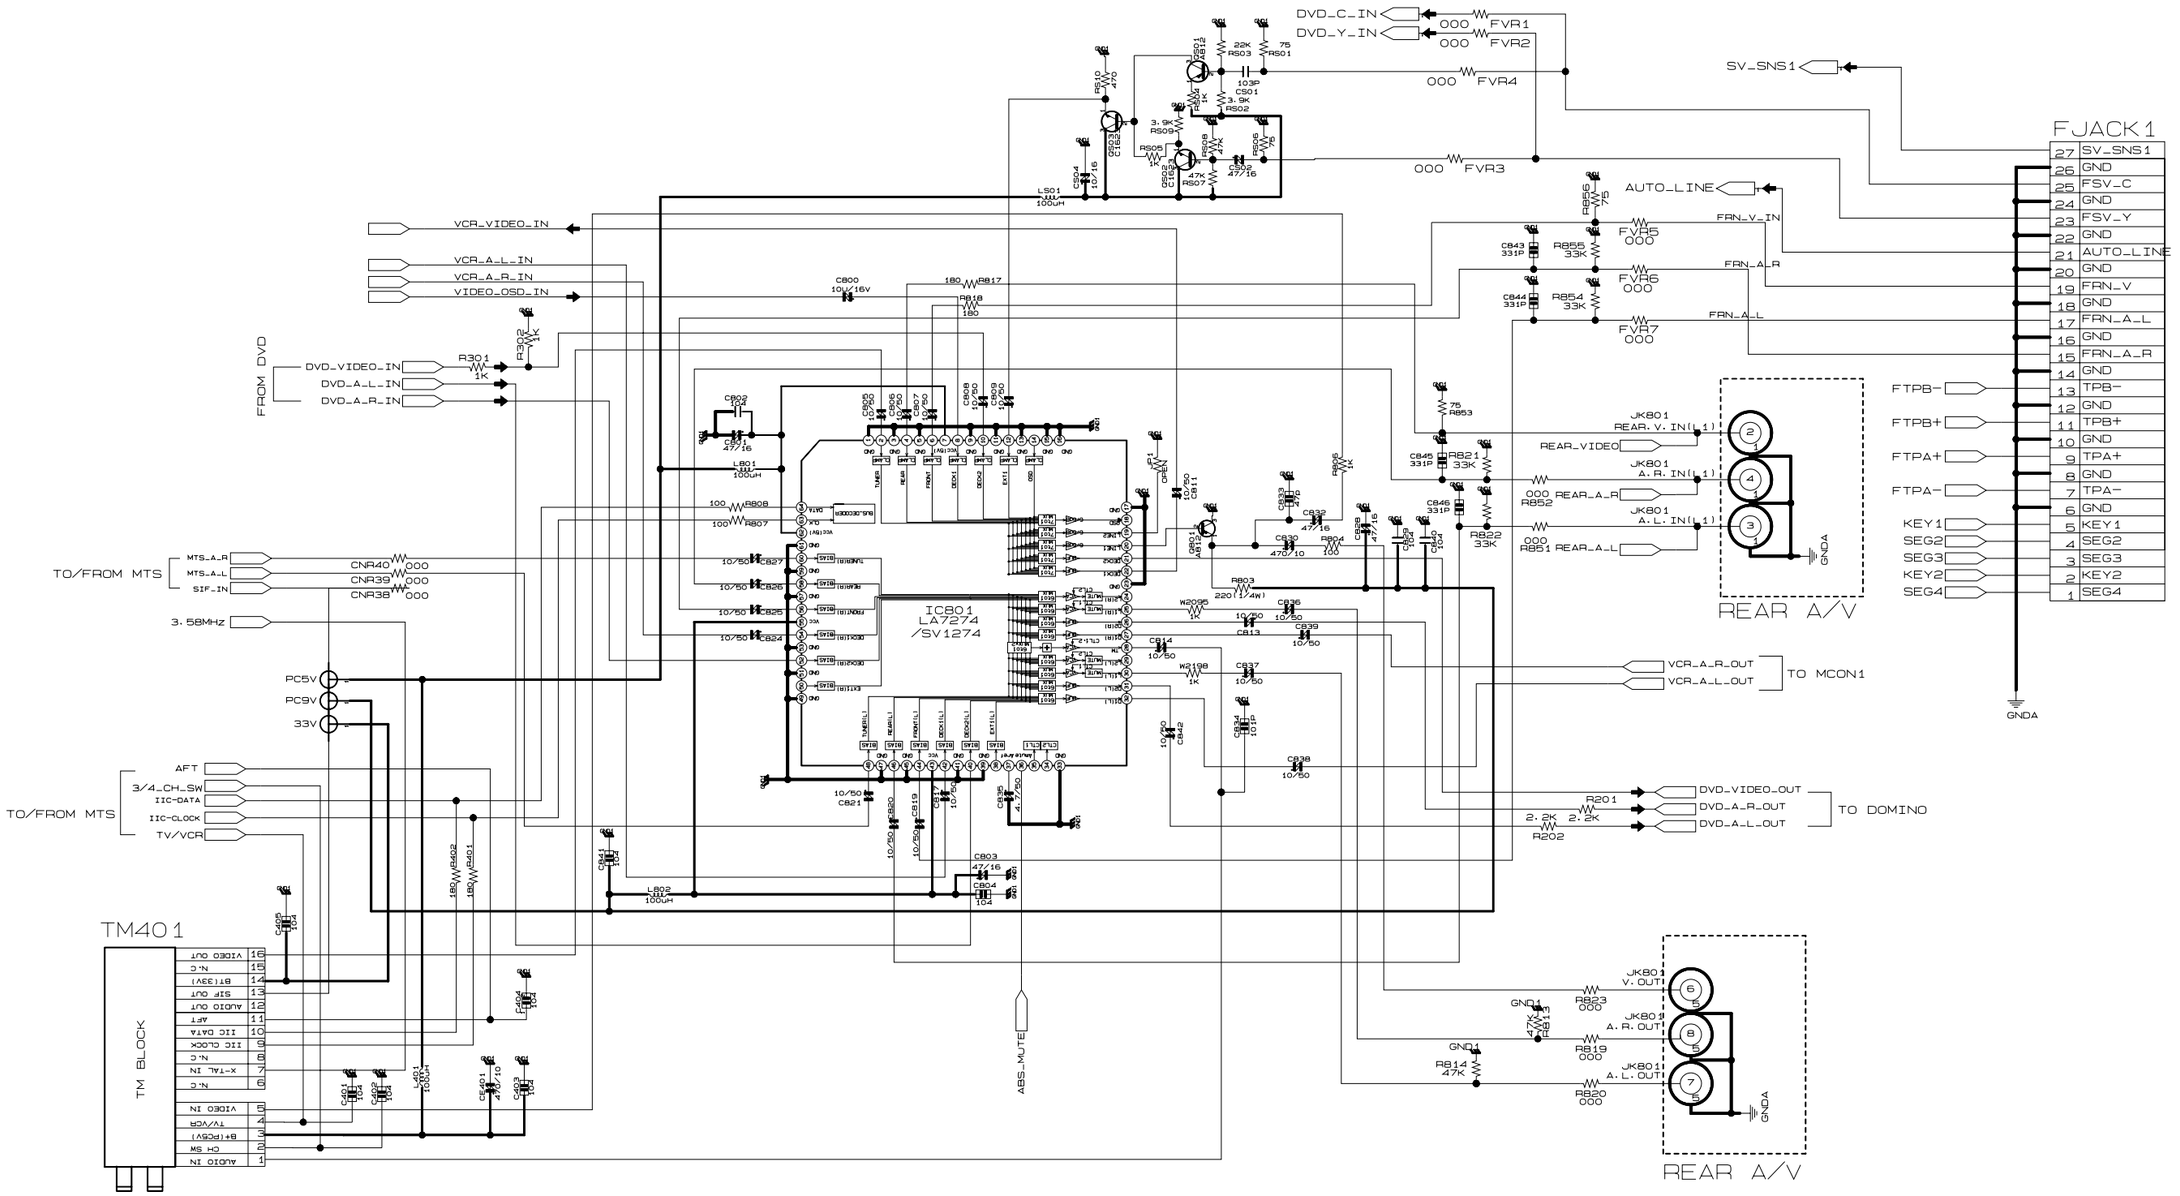
15-11 Audio In/Out (DVD Main PCB)



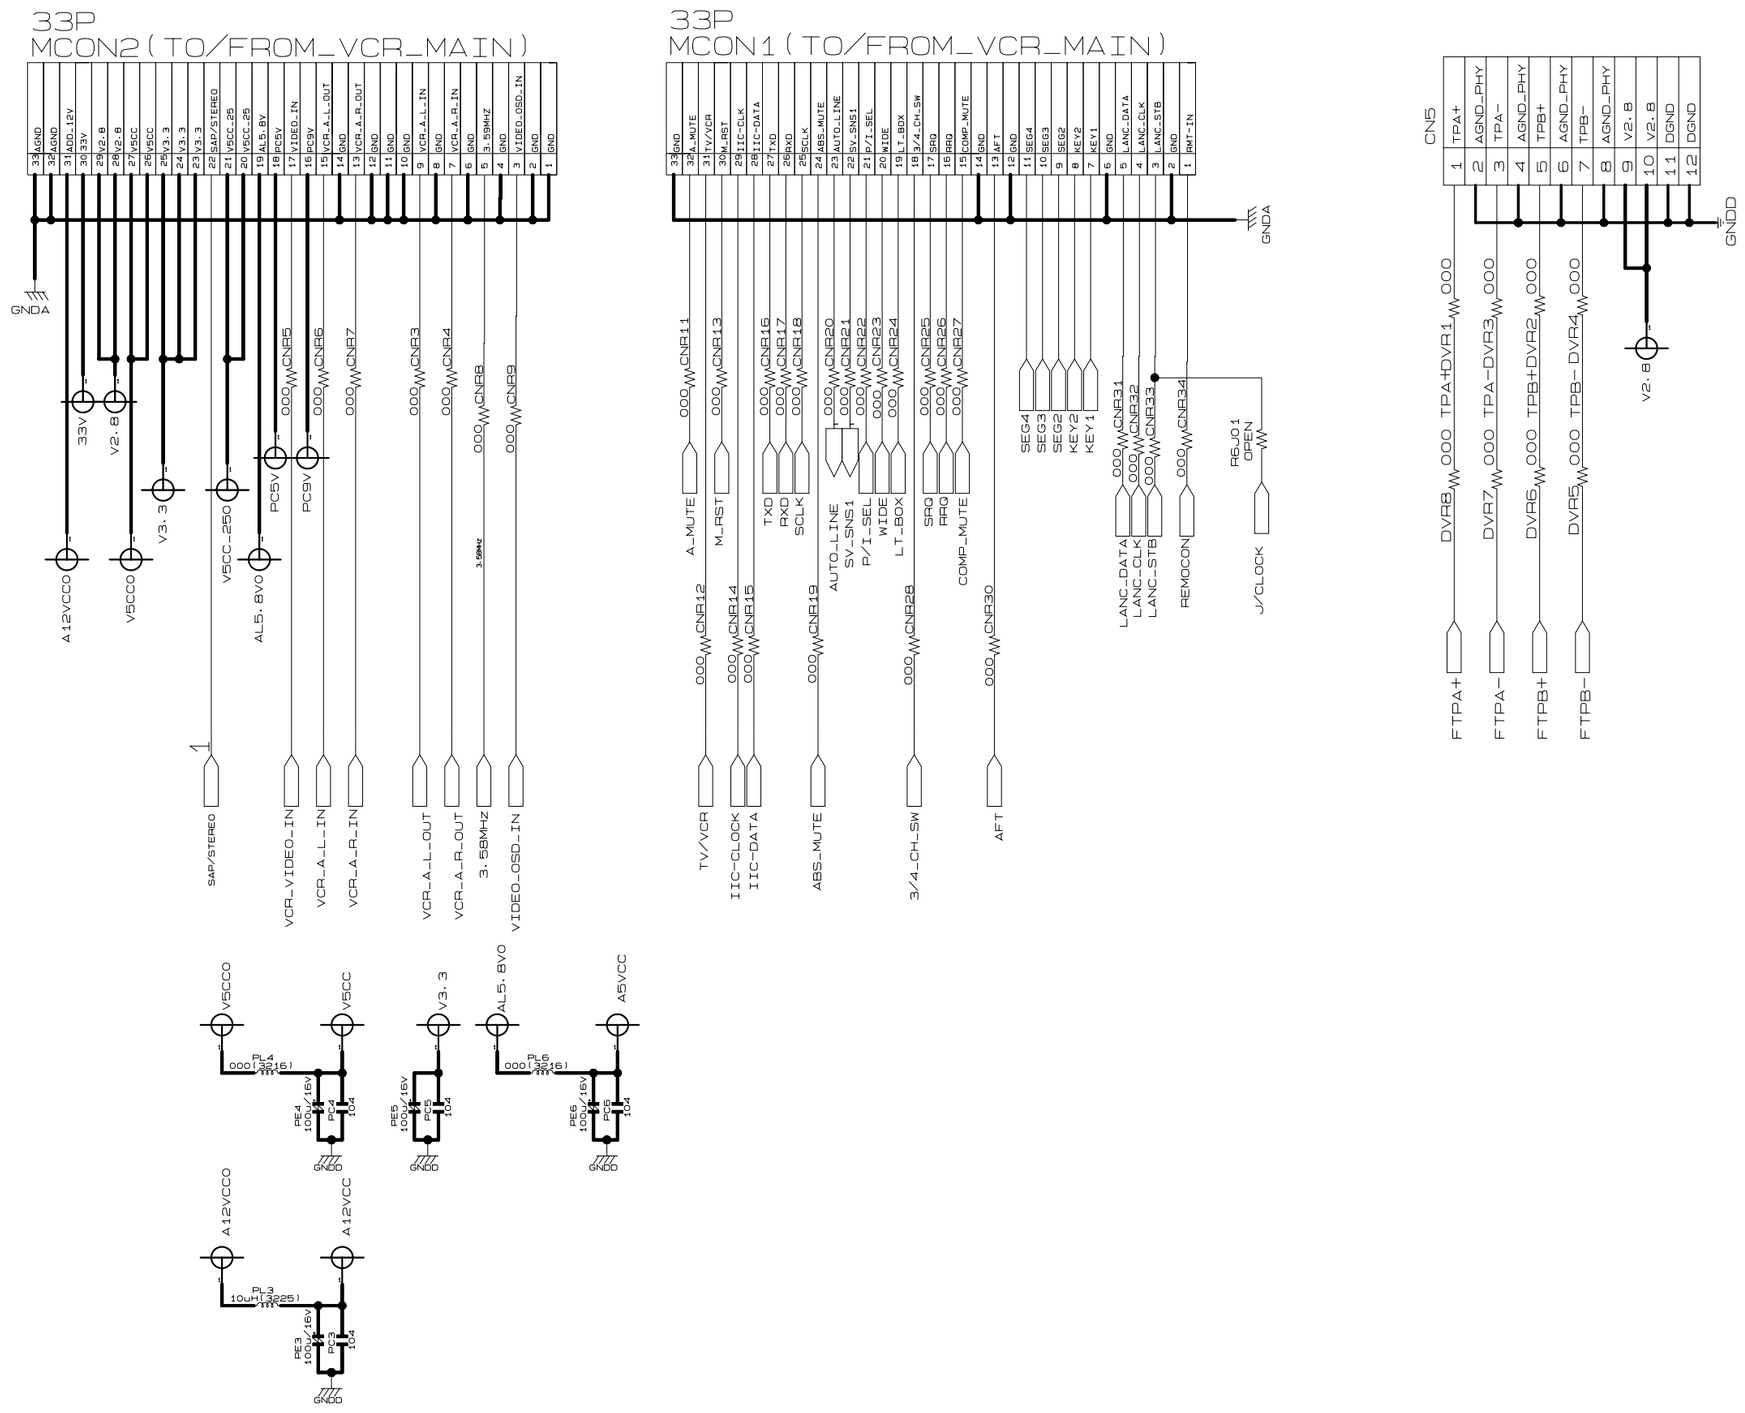
15-12 FLASH & SRAM (DVD Main PCB)



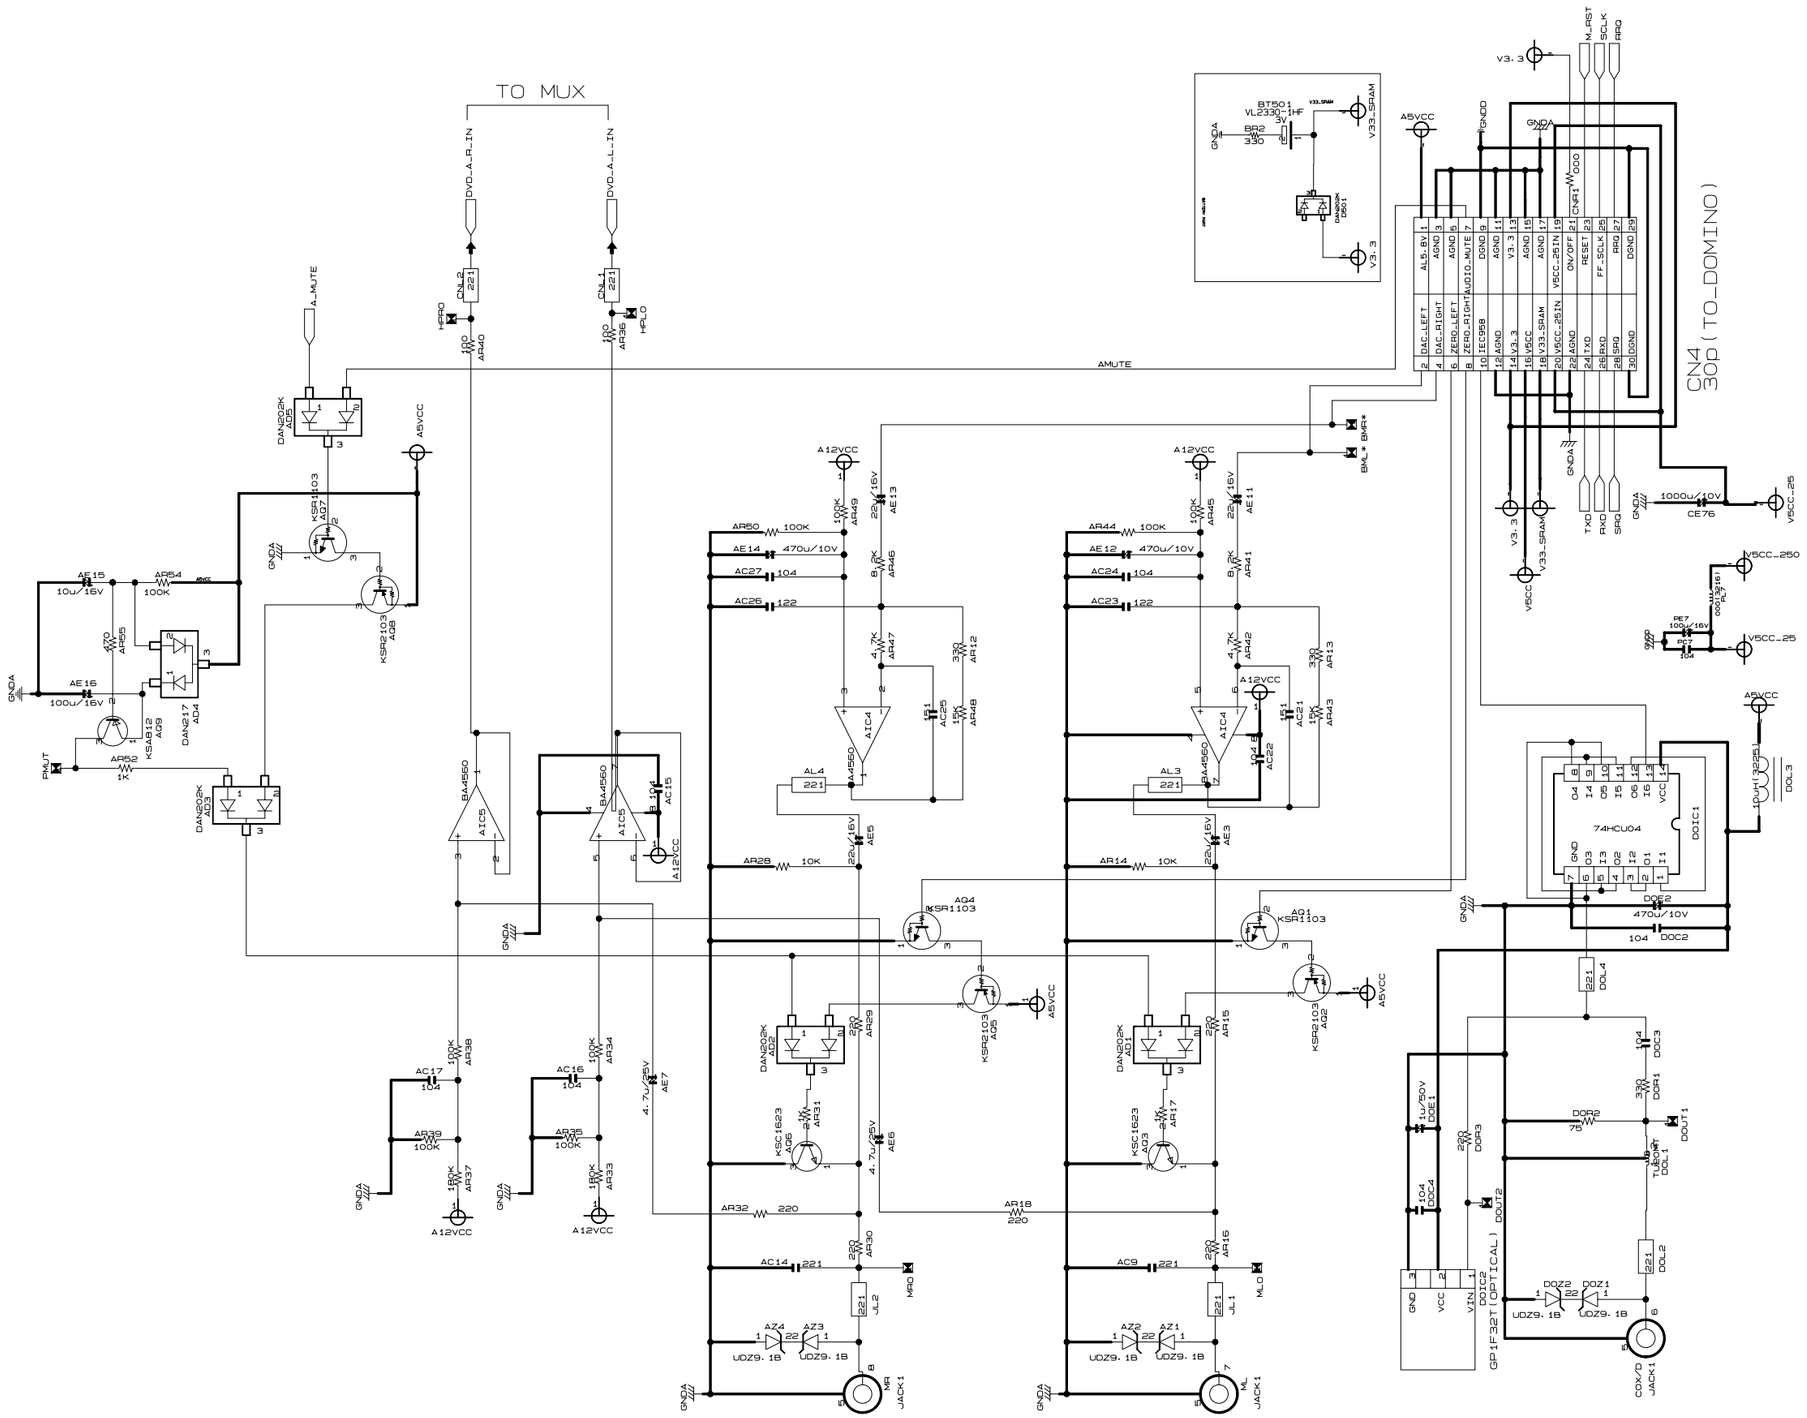
15-13 MUX & TM & A/V Input (Jack PCB)



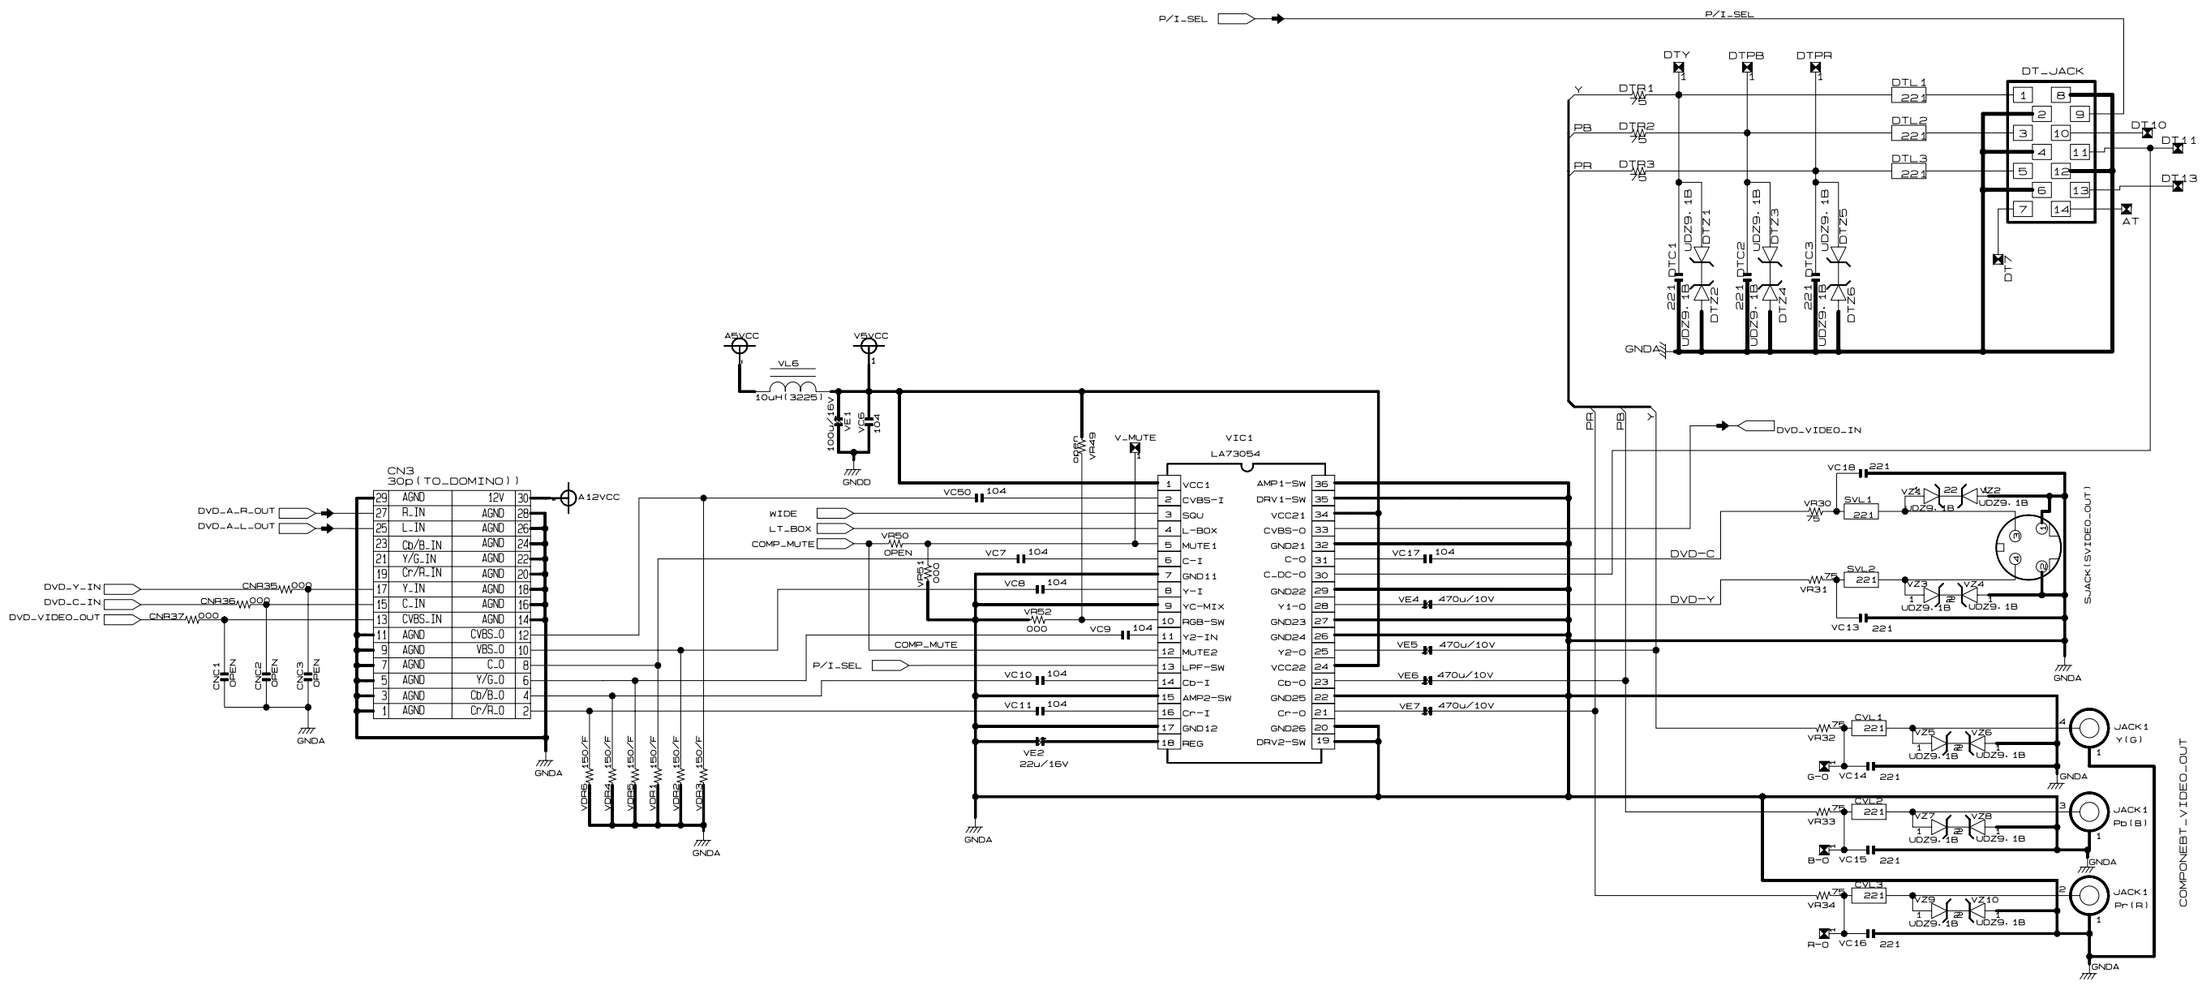
15-14 MUX Connector (Jack PCB)



15-15 Audio Out (Jack PCB)



15-16 Video Out (Jack PCB)



15-17 Front/Key (Front PCB)
